ṚKTANTRAM

A PRATIŚAKHYA OF THE SĀMAVEDA

CRITICALLY EDITED

WITH

An Introduction, Appendices, exhaustive notes,
a Commentary called Ṛktantravivṛti and
Sāmavedasarvānukramaṇī.

BY

Vidyābhāskara, Vedāntaratna, Vyākaraṇatīrtha,

SURYA KANTA SHASTRI, M.A., M.O.L.

Said Mitha Bazar, Lahore.

PREFACE

I

When I originally conceived the idea of this work, my intention merely was to offer the *Ṛktantra*, along with the commentary in the Devanāgarī characters, to the Indian students; and at first, I thought that the same might be adequately given within the compass of a very small volume and in a little time. But when, after completing my *History of Hindi Literature* in 1930, I took up the work seriously, I found it otherwise. The work has been till now utterly ignored and neglected by Sanskrit grammarians, and the way in which Dr. Burnell treated it, left little attraction to a serious study of the same; the only apparent charm which it claimed was, that this was the only available work of Śākaṭāyana, one of the most ancient Indian grammarians, and this charm was rudely shattered by the erudite editor himself. But a patient and sifting enquiry into the matter led me, ultimately, to think otherwise; and the rich store of facts, which this little treatise yielded to me, supplied me with material, rich enough to build a fine bridge of hypothesis, standing over which we could get a clear glimpse of the glorious region of the rising harvest of Indian grammar, a region till now left quite unlit by my learned predecessors. Standing over this bridge, we are enabled to see the mighty figures of Audavraji, Gārgya and Śākaṭāyana, casting their stately shadows forward on the rich canvass of Yāska and Pāṇini. Nay, more than that. For

the first time in the history of Indian Grammar, we have been vigorously urged to read in the works of Yāska and Pāṇini the essence of what Gārgya and Śakaṭāyana had taught centuries before, centuries that were till now supposed quite beyond the range of history. And thus it was that in attempting to settle one question I raised many more. Wider and wider prospects opened out before me, and thus, step by step, I was lured on into the far-spreading field of Indian Grammar, that had been but little explored by my worthy predecessors. The bridge of Rktaṇtra has led us upto Audavraji, whom the Vamśabrāhmaṇa mentions among the most illustrious ancients of Sāmavedic traditions; and here we stand up sharp on the edge of a yawning chasm, across which we are quite unable to find any way. I know that hypothesis are very often only temporary bridges to connect isolated facts; and no wonder, if my light bridge should, sooner or later, be superseded by a more solid structure, but my work will still claim its utility and its interest as a repertory of facts.

II

Truth has been my only guiding star, and in the love of truth I have not hesitated to express my views about the origin of the Sāman, which, I am afraid, may not be palatable to my Indian friends and co-religionists. It is, indeed, a melancholy and, in some respects, a thankless task to strike at the foundations of old religious beliefs, beliefs in which, as in a strong tower, the hopes and aspirations of countless devotees, through long ages, have sought refuge from the stress and storm of life. Yet, sooner or later, it is inevitable, as Frazer has put it, that the battery of comparative research should breach these venerable walls, mantled over with the ivy and mosses and wild flowers of a thousand tender and sacred associations. At present the science is only dragging the guns into position; they have hardly yet begun to speak. The task of building up into fairer and more enduring forms the old structures of beliefs,

so rudely shattered, is reserved for other hands, more beautiful than mine, perhaps for future and happier ages. We cannot foresee, and we have no right even to guess the new forms, which our religious beliefs and dogmas will assume in future. Yet this uncertainty must not induce the scientist, from any consideration of expediency or reverential regard for antiquity, to spare the ancient moulds of belief, however beautiful and pious, from the fire of sifting criticism. We must follow truth alone, irrespective of what comes of it or where it leads. I have also discussed, in a new light, of course, the age-long question of the priority of Pūrvārcika over the Uttārcika. The problem has, for a long time, exercised the minds of two of the most brilliant Orientalists of the day i.e. Oldenberg and Caland. Here I have accepted, though only partially, the verdict of H. Oldenberg on my own independent ground and have, in parts, rejected both, and that too, on my own account.

These and many other things have been touched and discussed in the Introduction, and many more, particularly those, connected with the Prātiśākhya literature proper, will be found in the notes.

III

A word now about the manuscript material. The manuscript material, on which is founded this edition of Rktaṇtra, is as follows :—

A. This MS. belongs to the Central Library of Baroda. No. 12912 (a) p. 24 of the Catalogue of MSS. in the Central Library, Baroda, Vol. I. Leaves 4; granthas 70; Saṃvat 1682; size 9. 1/2 × 4. 1/2; material light-coloured paper; number of leaves in the full MS. 19; number of lines per page 10; character Devanāgarī.

Contents. It gives the text of the Rktaṇtra and Sāmaṇtra. It is distinctly and correctly written.

B. Its number is 12917; leaves 19; granthas 500; Catalogue of the MSS. in the Central Library, Baroda p. 24. Its size is $9 \times 4 \frac{1}{2}$; material paper; number of lines per page 10; characters Devanāgarī. It is a copy of the text together with the commentary, each separate rule being followed by its own comment. It is distinct and virtually correct. The appearance of the paper and orthography point out that the MS. is, in no case, later than the 15th A. D. It may be earlier. The MS. has been of great help to me.

C. This MS. belongs to the Adyar Library. Its No. is 33 E 12 gra 8; A Catalogue of the Sanskrit MSS. in the Adyar Library, Part I, p. 48. It is written in grantha characters; the total number of lines in the MS. is 200. It was transcribed into the Devanāgarī script for me by Mr. E. Krishna Variar. It gives the text alone and is fairly correct.

As regards the text of the Rkṣtantra all the MSS. virtually agree. As for the first Prapāṭhaka and the commentary, the MS. B. seems decidedly better than the one used by Burnell.

With regard to the punctuation and euphonic combinations in the commentary, I have taken liberties for the sake of inserting references to the examples. Burnell and B. are in no slight degree discordant with each other, inconsistent with themselves and at places quite careless of the requirements of the sense. In fact, they offer no sure standard to follow. For the occurrence of virāmas, as printed, I am alone responsible. But at places—and these are many—where Bur. and B. are agreed in matters of punctuation and reading, I have followed them in the text, but have proposed my emendations in the notes, which alone can make the text sensible; and in that alone lies the real test of the ability of the editor.

In the same method are treated minor orthographical peculiarities, such as writing a sibilant instead of visarjanīya before an initial sibilant and so on. I have not, however,

thought it advisable to interfere with the practice of writing anusvāra, instead of a nasal before initial dentals, because the practice is a peculiar feature of the Sāmavedic literature. Cp. note on 178. Similarly in citing examples on sūtras 269-271, I have closely followed the manuscript authority, and have given only one letter, where the sūtras require doubling; thereby showing that the phenomenon of doubling, which once formed so prominent a feature of the Vedic euphony, fell into abeyance at some time, and to this time belong, invariably all our Sāmavedic MSS. Cp. note on 271. and Macdonell, *Vedic Gr.* p. 21.

In making references to the SV., I have used only two numbers, the first designates the Ārcika and the second denotes the consecutive number of the stanzas, as was done by Burnell, and was lately adopted by M. Bloomfield in his Concordance. The divisions adopted by Benfey,—and those are the real and logical divisions of the SV.—would have covered too much space; and this would have spoiled the beauty of the printing. For the same reason I have dispensed with the use of Indian virāmas in favour of the English full stop after brackets, when they occur in between two examples.

A MS. of *Ṛktantra-vivṛti* (No. 26 G. 34 gra 23 Catalogue No. of p. 48) was secured from the Adyar Library, which was transcribed for me into the Devanāgarī script by Mr. Variar, and the same has been printed here for the first time. Burnell also had a copy of it, which he later on made over to the British Museum. It would have taken long time to get the same from London, and moreover, I knew from its specimen, printed by Burnell in the Introduction of his *Ārṣeya brāhmaṇa*, that it would offer me little help in constructing the correct text. I therefore forewent the idea of delaying the work on that account.

A codex containing numerous works on Sāmveda, some of them being of intrinsic worth, was secured from the same

library. And I got from it *Laghu-ṛktantra-saṅgraha* (33 D 12 gra 20 Catalogue p. 48) *Sāmaveda-sapta-lakṣaṇa* (33 D 12 gra 20 Catalogue p. 54) and *Sāmavedasarvānukramaṇī* by *Tālavṛntanivāsin* (33 D 12 gra 20 Catalogue p. 54) transcribed into Devanāgarī for my personal use. The first two works have a direct bearing on the *Ṛktantra*, and will therefore be printed with copious comparative notes and references in a separate volume. Important extracts have been given from the third, which seems, to all intents and purposes, a modern work.

In my notes on *Ṛktantra* I have instituted a careful and exhaustive comparison with other *Prātiśākhya*s and *Pāṇini*, have discussed in detail the peculiarities of the *Sāmavedic* grammar, and have made for that, the fullest use of all the eminent Indian and Western writers on the subject. In making references to the examples, catalogued in *Laghuṛktantra* and *Sāmasaptalakṣaṇa*, I have followed the most tedious method i.e. SV. = RV. = RT. RPr. = VPr. = TPr. = and CA. for each example, and have thus succeeded in presenting more or less, a complete picture of the whole Vedic euphony. In fact, my aim has been throughout to follow meticulously the comparative method of studies, in which I have been very liberal, perhaps more liberal than may seem worthwhile even to German scholars. But I preferred to err in this direction than the contrary.

And it will not be any exaggeration if I say that, having this booklet of *Prātiśākhya* literature in his hand, the student of Vedic euphony will not feel the necessity of studying any other *Prātiśākhya* or a kindred work.

IV

I shall have occasion to speak in the Introduction of the extreme brevity and curtness of the text and the commentary. Thus, though only imperfectly aided by the commentator, I have yet enjoyed one compensating advantage

over those, who have hitherto undertaken the publication of works of this class, in that I have been able to avail myself of the results of their labours. Had it not been for their efficient help, more particularly that of Whitney, Benfey, Burnell, Wackernagel and Macdonell, much in the present treatise, of which the explanation has now been satisfactorily made out, might have remained obscure; and I desire to make a general acknowledgment of my indebtedness to them and a host of other brilliant orientalists of Europe and America, whose authority I have cited very often, and with a very great regard, indeed. Much as I owe to these big luminaries in their individual capacity, I owe infinitely more to the collective Western Scholarship, my debt to which it is simply impossible for me to acknowledge here adequately. My interest in this kind of comparative Vedic study was first excited by the works of Pischel, Geldner, Oldenberg, Caland, Macdonell and Keith, who opened up a mental vista, undreamed of by me before. But it is a long step from a lively interest in a subject to a systematic study of it, and that I took this step is entirely due to my beloved *ācārya*, Principal A. C. Woolner, M. A., C.I.E. The debt which I owe to the vast stores of his knowledge, the abundance and fertility of his ideas, the unfailing sureness and clearness of his judgment and above all, his unwearied kindness, can never be over-estimated. Never did I feel happier in my life, and I mean it to be taken literally, than while sitting at his feet and listening to his brilliant exposition of the Veda and the comparative Indo-European Philology. Woolner ! what a glorious word ! It stands, to me, for an immense volume of hard work, a mass of original research, touched by the spark of genius, and expressed with the fire of the true teacher. Nay more. It stands for two things that are infinitely better than charm and popularity, fairer than even wisdom: uprightness and honour. And if I, inspite of getting the privilege of working under such a ripe scholar, have been able, hitherto, only to touch, as I am quite aware, only the

fringe of a great subject, to finger only a few of the countless threads, that compose the mighty web of Oriental Studies, it is not because of the teacher's negligence, but merely because neither my time nor my knowledge, little as it is, has hitherto allowed me to do more. I am also indebted, in my literary pursuit, to Dr. Lakshman Sarup M. A., D. Phil., Professor of Sanskrit Literature, whose name conjures up many pleasant hours spent in his company, many memories both blissful as well as sad, and many benefits. I am obliged, for readily procuring MSS., to my colleague and friend Pt. Bhagavaddatta B. A., Superintendent, Research Department, D.A.V. College, Pandit Hans Raj, Librarian, Lal Chand Library Lahore and Lala Labhu Ram, Librarian, Punjab University Library. I must also record my thanks to Messrs. Mehar Chand Lachhman Das, Lahore, who at my request started, in these days of terrible depression, the Series of Oriental Publications and thus, have laid the oriental learning under a deep debt of gratitude.

But the one person whose name I cannot pass over in silence, and to whom my debt with regard to this volume is particularly heavy, is my wife śrīmatī Sukhada Devi; for to her has fallen the task—necessarily laborious and exacting—of preparing indices to the RT. Nothing has, indeed, encouraged me more in this arduous and fascinating pursuit of research, than the loving and meticulous care, with which she, my comrade of many hard years, has always helped me in my literary pursuits.

D. A. V. COLLEGE, LAHORE
Śrāvaṇī, the day of Rakṣābandhana.

5. 8. 1933.

INTRODUCTION

I

Ṛktaṇtra belongs to the Sāmaveda.

The text, commonly called *Ṛktaṇtravyākaraṇa*, belongs to the SV. and not to the RV. This is shown by the following:-

(a) It frequently alludes to *sāman*, *stobha* and the like. Cp.:-

Terms.	Sūtras	Terms.	Sūtras.
saṃsvāda and nigāra	11	stobha	150
sāman	39	him	90. 266
rājana (sāman)	123	gati	29. 111
kitkit	10	grā (grāmegeyagāna)	113

(b) The technical terms, used in it, belong to the Sāmavedic literature. This will be shown in details later on.

(c) Naigi and Audavraji, the two ancient ācāryas of the SV. alone are cited.

(d) *Ṛc* 1. 337 is quoted on 89. This is not found in the RV, but only in the SV. The above facts show that *Ṛktaṇtra* belongs to the SV. and not to the RV. It is needless to refer to the commentary in support of this view.

Ṛktaṇtra is a Prātiśākhya of the SV.

A *Prātiśākhya* was defined by Goldstucker² as "a gra-

1 "tantramiva tantram | dairghyenā prasāritāstantavastantramityucyante | yathā tadānekasya tīrāśelnasya tantoranugrāhakam tathedamaphyanekasya laksyasyetyarthah." *Nyāsa on Kāśikā* Vol. I, p. 2.

2 Goldstucker, *Academy*, July 9, 1870, p. 270, quoted by Burnell, *RT*, p vii, *Caland*, *PVB. Int.*, p vii.

mmatical treatise which shows how the padas must change in order to become the real hymnical text, and again, how by means of the krama, the padas become the true representatives of the Saṃhitā". The SV. has no krama text,¹ but in other respects, our treatise agrees with this definition, and we may safely call it a Prātiśākhya.

But because a Prātiśākhya, as its name implies, must be concerned with a particular Śākhā of a Veda, our treatise must belong to a particular Śākhā of the SV. and not to all of them. Burnell has given the following Śākhās² of the SV.:-

- (1) Kauthuma.
- (2) Jaiminiya.
- (3) Rāṇāyaniya.
- (4) Gautamī.
- (5) Naigeya.

To which of these Śākhās does the RT. belong ?

(1) *It does not primarily belong to the Jaiminiyaśākhā.*

- (a) The prominent feature³ of the JS. is the conversion of ḍ into 1. This is not stated in it.
- (b) Rule 58 prescribes circumflex for 'vṛdhe 'smān' (SV. 1. 239). The JS. reads 'vṛdhe asmān'; hence the rule is not applicable to it.
- (c) Rule 114 prescribes raṅgatva for ā in cases like 'svarvāṣ.' The phenomenon is not found in the JS. Cp. Benfey, 'svarvāṣ asurebhyah.' 1. 254 = JS. 'svarvaṃ asurebhyah;'

1. rgvedastu ghanāntaḥ syād yajurvedo jaṭāntakaḥ |
sāmavedaḥ padāntaḥ syāt saṃhitāntastvatharvaṇaḥ ||

Yohiprāptilakṣaṇa, a MS. work in the Madras Library, No. 948.

2. Müller, Anc. Skt. Lit. Caranās, pp. 365-378; Bur. RT. p. xxvi; R. Simon, Vedische Schulen, pp. 27-31; Prapañcahrdayam, p. 19; Sāmaśramin, Trayīparicaya p. 40.

3. Caland, JS. p. 33. For a discussion on ḍ=1, cp. Turner "Middle Indian-ḍ and ḍḍ" in BLWGI. 4. 35.

'mīdhvā* asmabhyam' II. 982 = 'mīdhvamasmabhyam';
'agne devā* ihāvaha' II. 142 = 'agne devaṃ ihāvaha.'

- (d) Rule 112 implies 'vasū* riha,' 'rudrā* ādityā* uta' and so on. JS. on the contrary reads 'vasumriha,' 'rudraṃ ādityam uta' and so on ¹

(2) *Our treatise does not primarily belong to the Śākhā of Sātyamugri and Rāṇāyana:-*

Patañjali states that the followers of Sātyamugri and Rāṇāyana read a half *e* and *o* in instances like 'sujāte eśvasū-
nrte,' 'adhvaryo odribhīḥ sutam'. According to Bhattoji², the fact was expressly noted in the Prātiśākhya of this Śākhā. This is not referred to in our treatise.

(3) *RT. does not primarily belong to the Gautamiśākhā.*

The Gautamiśikṣā³, a treatise on the doubling of (SV) consonants, makes in the end the following statement:-

"atha saptākṣaramekamudāhrtam prātiśākhye | tra hi
tra hi yinikṣva (1. 301) iti nanakasasasavāh | gautamenoktam |
"na saptākṣarāt parah saṃyogo bhavati |"

This is significant, as it shows that there existed a Prātiśākhya, presumably of the Gautamas, which recorded this phenomenon. Our treatise does not even hint at it.

(4) *RT. does not primarily belong to the Nageyaśākhā.*

On sutra 94, the commentator cites 'endra sānasim' (1. 129) as an example of the guna sandhi. The Saṃhita of the Nageyas has 'aindra sānasim'.⁴

(5) *The treatise primarily belongs to the Kauthumaśākhā.*⁵

1. For other peculiarities cp Caland, JS pp 32-35

2. Cp. note on 82

3. Burnell, RT p. xxxvi.

4. Benfey, SV. Einl. p. xxxii

5. In later times the followers of this Śākhā spread in the Gujrat. Cp R. L. Mitra, Chāndogyaopaniṣat, translation Introduction p 4, Siegling, Die Rezensionen des Caranavyuha p 27. The Kauthumas and Rāṇāyanīyas use seven notes in music, while the Jaiminīyas use six and others only five. Cp the verses at the beginning of PpS IX. 22 and R. Simon, PpS, p. 495.

The references to the rc, in the sūtras, are without any exception, found in the Kauthuma SV. The commentator has closely followed the same text. Moreover, we meet with explicit statements to this effect. To quote only one:-

“kauthumānām ke vā granthā adhyetavyā iti cedatrāha kaścit”:-

“dvipañcāśadime granthāḥ śākhāyāḥ kauthumeriha¹ ।
 proktāḥ sāmodadhau yasmācchraute smārte suniścītāḥ ॥
 tasmādvai sāmāśākhāyām granthabhedo nigadyate ।
 śrautas-mārtodite yasmānna muhyeta² katham cana ॥
 veñāraṇyakamūho³ tra rahasyam gānamucyate ।
 chandasyāraṇyake caivam mantrāḥ sottarakāḥ smṛtāḥ ॥
 chandasyāditrayam stobhāḥ sapadam syāccatuṣṭayam ।
 tāṇḍyaḥ ṣaḍviṃṣakam sāmavidhānārṣeyake tathā ॥
 devatādhyāyavamaśākhyaḥ saṃhitopaniṣattathā ।
 aṣṭamopaniṣacciva brāhmaṇe samudāhṛtāḥ ॥
 nārādī lomaśī śikṣā gautamī ceti vai tridhā ।
 kalpasūtram tathā kṣudram lāṭyāyanakameva ca ॥
 upagranthāḥ pañcavidho nidānam tāṇḍyalakṣaṇam ।
 anupatsthādanustotram kalpānupadameva ca ॥
 etaddaśavidham sūtram sāmageṣu ca viśrutam ।
 ṛktantram sāmātantram ca sañjñālakṣaṇameva² ca ॥

1. Caland has treated these treatises in detail in his *Einleitung to the JS*, pp. 1-14; *PVB*, pp. 1, viii.
2. According to Burnell (*Catalogue of a collection of Sanskrit Mss.* London, 1870, p. 41) the last two Prapāṭhakas of Ṛktantra are called Sañjñāprakaraṇa. Caland holds (*PVB*, Intr. p. vii) that this is probably the same as the Sañjñālakṣaṇa, mentioned in the *Caranavyūha*. But the last two chapters of the RT, have nothing peculiar to claim this appellation and a separate reference in the *Caranavyūha*. We have, on the other hand, a *Sañjñākarana-bhāṣya*, a Ms. work in the Library of Asiatic Society of Bengal. (A Descriptive Catalogue of Skt. Mss. in the Government Collection. The Asiatic Society of Bengal, Vol. II, p. 1052) which is a commentary on Sañjñākarana, a treatise in sūtra form on the stobhas

dhātulakṣaṇakam¹ ca syāditi vyākaraṇāni ca ।
 anukramanikā ceti naigeyaṃ ca tataḥ param ॥
 phullam gobhulagr̥hyaṃ ca mantralakṣaṇakam tathā ।
 gāyatrīyādividhānam ca tataḥ stobhānusam̐haraḥ ॥
 chandogapariśiṣṭam tu gr̥hya saṅgraha² eva ca ।
 śrāddhakalpe tato vedyāsādhanaṃ gobhiliyakam ॥
 snānavidhirupākarma śrāvaṇena paro vidhiḥ ।
 dvipañcāśadime granthā vṛṣotsargāntagāḥ smṛtāḥ ॥
 iti kauthumaśākhayāṃ granthasaṃkhyā yathākramāt ।
 etānadhītya nikhilam vedoktam jñātumarhati ॥

GGKP. pp. 28-29.

This makes the position quite clear. But assuming that the RT. belongs to the Kauthumaśākhā, how to explain those statements of it, that apparently apply to the texts of other Śākhās, and references to the authorities, that have their own Śākhās. The explanation will be found in the following:-

The precise scope of a Prātiśākhya.

The original and perhaps more significant term for the Prātiśākhya was the pārṣada, which implied that the treatise in question belonged to a social group (pariśad) in which, among other things, the general principles of phonetics were adopted to Vedic texts, by oral instruction³. According to

or particular words put in, in chanting the various sāmans. And this is exactly what the Caranayūha seems to have in view, and what the context here requires. A similar treatise is Aksaratantra, edited by Satyavrata Sāmaśramin, but not mentioned by Caland in JS and PVB.

1 Not yet identified

2. Printed text has gr̥hyāsangraha. But cp. Ms. Bodl. W 504 "gr̥hyasangraham nāma pariśiṣṭam gobhulaputrakṛtam. I have adopted this only partially.

3 S Varma, Critical Studies, p 12 pariśad and samśad = gathering for open discussion, opposed to upanīśad, which implied secret instruction. Oldenberg is inclined to believe that the real sense of the term upanīśad is worship or reverence and that the word expresses the same meaning as upāsānā, ZDMG, 1, 427 ff Lit 70 ff, Die Lehre der Upanīśaden p 37. For the view of Deussen cp Phil of Up p 16 ff

Yāska¹ each Carapa of a Veda had its own pārṣada, and the term Prātiśākhya, which obtained later on to designate these treatises, has been etymologically explained by Mādhava² as “prātiśākhaṃ bhavaṃ prātiśākhyam” and this leaves absolutely no doubt that there existed, at some time, as many Prātiśākhyas as there were schools of the Vedas³.

But contrary to this, the author of Vaidikābharapa⁴ states, in no less explicit terms, (a) that the word Prātiśākhya

1. padaprakṛtīni sarvacarapānām pārṣadāni | Nir. 1. 17. For the difference between Carapa and Śākhā cp. Müller, *Anc. Skt. Lit.* pp. 125-129; 377, 378. Cp. also his admirable discussion on Carapa pp. 364-378.
2. Jñānendra Sarasvatī on SK. Pāṇini IV. 3. 59.
3. (a) Six Prātiśākhyas are available:—
 - (1) TPr. belonging to the Aukheyas.
 - (2) VPr. belonging to the Vājasaneyins.
 - (3) RPr. belonging to the Śākalas.
 - (4) RT. belonging to the Kauthumas.
 - (5) CA. belonging to the Śaunakaśākhā of the AV.
 - (6) APr. newly discovered: text with a copious commentary in the press.
- (b) References are found to three more:—
 - (1) Sātyamugri Prātiśākhya. Cp. above.
 - (2) Gautama Prātiśākhya. " "
 - (3) Cārāyaṇīya Prātiśākhya. Devapāla on KGS. (1. 5. 1.) refers to it. He says “tathā ca cārāyaṇīyasūtram” “puruṣārte chvachrayoḥ” iti puruṣab-
daḥ kṛtaśabdaś ca lupyate yathāsaṃkhyam che chre parataḥ” | See
Caland, KGS. For kṛchra = kṛpsra cp. Macdonell, *Vedic Gr.* p. 31.
I owe this information to my friend Pt. Bhagavaddatta of the D.A.V.
College, Lahore.
- (c) There may have existed a distinct Prātiśākhya for the Bāṣkala Śākhā of the RV. Referring to “na ṛte śrāntasya sakhyāya devāḥ” the commen-
tator on ŚŚS. (xii. 13. 5) states:—
“apadruto nāma sandhir bāṣkalānām prasiddhaḥ | tasyodāharapaṃ” |
This sandhi has not been noticed by the RPr. which is, otherwise, most
comprehensive and complete. Does it not hint at a RPr. other than the
present one ?
4. On TPr. IV. 11. “dvitriśākhāviṣayatve’pi tadasādhārapatayopapatteḥ |
tathā bahvṛcām śākalabāṣkalātmakaśākhādvayaviṣayam prātiśākhyam
prasiddham | ”

refers to a group of Śākhās, (b) that the RPr. pertains both to Śākala and the Bāṣkala Śākhās (c) and that the examples quoted by the TPr., but not found in the extant text of the TS. must be traced in the extinct Śākhās of the Veda. This is tacitly confirmed by Uvata¹ and the commentators of other Prātiśākyas. How to explain this conflict ?

The conflict explained.

The "winged songs" of the Vedas, which had been composed at widely separated periods of time and space, were united at some time in collections, and ascribed to famous ṛṣis of prehistoric times, preferably to the earliest ancestors of those families, in which the songs in question were handed down². And, as may be expected in a time, when there existed no central authority³, and people either did not know how to write, or if they did, as I think very likely⁴, they did not, perhaps

- 1 Cp. "mrgyamudaharanam" RPr. vii, 33, "upāgatyeti saṃhitāyām na dr̥ṣyate { vṛttāvidamudāharanam dr̥ṣtam ||" Uvata on RPr. vii, 33, Cp. also vii, 54
- 2 Winternitz, Gesch. der Ind. Litt. Vol I. (Eng. trans.) p. 57
- 3 Even AB. VIII, 14, 23 shows how little real empire existed. Cp. also N. N. Law, Ancient Indian Polity pp 13 ff
- 4 Bloomfield, The Rel. of the Veda p 21. According to Buhler, whose theory has been generally accepted, the Brahmi alphabet was of Semitic origin, and derived ultimately from a Phoenician script. Cf Cambridge History of India p. 62, Buhler, Indische Paleography (Grundriss d. Indo arische Phil.) Rhys Davids preferred a pre Semitic Fuphratan origin via Dravidian traders. For the theory of Egyptian origin cp. Lehnmann Haupt, ZDMG, Lxxiii pp. 51—79. In Mahenjodaro and the Indian Civilisation Vol. II, Ch. XXII (pp. 423 - 432) Prof. Langdon makes out a strong case for deriving the early Brāhmī alphabet of India from the script recently discovered in Indus But according to Sir John Marshall (Vol I, p. 52) it is no more than a surmise, prompted mainly by resemblances between the two. Prima facie there is a strong presumption in favour of the Brahmi alphabet having been evolved, like other alphabets, from a pictographic script, especially as it is now established that such a script had actually been in use on Indian soil. I am, however, inclined to follow Prof Langdon

for secrecy's sake¹, commit them to writing, the variations in the arrangement of contents and text, were inevitable. And since these collections, that presuppose a tolerably elaborate scheme of priestly practices in connection with the hymns addressed to the gods², were meant mainly for utilitarian purposes, the priest must have shaped and reshaped them according to the requirements of the sacrifice, which naturally varied with different sets of the priests. Again, the hymns were, in no way, entirely immune from the phonetic law of change. A certain number of local varieties in accent and pronunciation, and in the recital of the hymns, crept in and became sanctioned by the tradition of different families or schools. These could not be given up, nor was there any means of determining which was the ancient and most correct way of reciting the sacred songs of the Veda. Thus there arose Śākhās and upaśākhās.

We have just noted that sacrifice was the dominant note of the Vedic life³, and just as a priest regarded the ritual of

1. Winternitz, *Gesch. der Ind. Litt.* Vol. I, p. 32. Read Chapter on "Die Schrift und die Überlieferung der Indischen Literatur" 28-37.
2. Bloomfield, *Rel. of the Veda* p. 31.
3. (a) Hillabrandt showed (*ZDMG.* XL, 708) that in a stage earlier than that recorded, the *R̥gveda* was a definitely practical collection of hymns, arranged according to their connection with the sacrificial ritual. Against this cp. Oldenberg, *GGA.* 1907 pp. 211 ff.; Keith, *JRAS.* 1908 pp. 224-9; *The Rel. and Phil. of the Veda* Vol. I, p. 1. cp. also Geldner, *Ved. Stud.* Vol. I, "Die Metaphorische Bedeutung von *vr̥jana*" p. 144 et seq; Bloomfield, *Rel. of the Veda*, Chapter "The Hieratic Religion". The *R̥gveda* is, in general, a hymn book for use at the three-fire ceremonies. They are a hieratic literature in a very extreme sense. Not only do they reflect the class interests and the class view point of their priestly authors, but they devote themselves exclusively to this ultra-hieratic phase of religion, the religion centring about the three-fire cult. Not only are secular matters not primarily considered at all, but even those more popular religious performances are ignored, which did not require this elaborate ritual, and which formed the staple religion of the great mass of the Aryan people. Nearly all of the few

his school as full of magic and mystic power, so also he held the text of his school particularly mystic and all important¹ And the time the text of a Śākhā was once fixed, numerous devices for its purity and preservation were invented, the chief among them being Prātiśākhyas, which like their basis, the Samhitā, must have been distinct for all the Śākhās.

But with the close of the Brāhmaṇa period, sacrifice receded into the background, and speculations of higher sort—philosophic, cosmic, psycho-physical, and theosophic—grew up, giving impetus to the tendency for generalisation². The priest now began to look for the unity under the veil of the diversity of his gods³, of sacrifice, that was no more than a gift to

Rgvedic hymns of which this is not true, are later additions to the collection, as it stands, though this does not necessarily imply that the hymns themselves are late Cp. Franklin Edgerton, in *Religions of the Past and Present*, p 122 note Cp also Muller, *Anc Skt Lit* "Earliest indications of the ceremonial" pp 489-492 For a more moderate and logical view cp Keith, *The Rel and Phil of the Veda Vol I* 'Popular and Hieratic Religion' pp 55-57

kaṭumichhati durmedha mogham tat tasya jivitam ||

Karmapradīpa I 3

- 2 Burnell, *RT Intr* p xxiv, Bloomfield, *Rel of the Veda* p 25
- 3 For the idea of unity in the RV cp x 129, the most often translated hymn of the RV See Whitney, *JAOS*, xl p V, ŚB X 5 3 1, JB III 35, 359 The hymn evokes admiration, not so much for the achievement, but for the thinkers who endeavoured to realize the ultimate principle of life, and failed to satisfy himself. Deussen (*Gesch der Phil I* 1 124, 125) inclines to think that the sages were able to discriminate between the ultimate principle of life and the phenomenal world See also Radha Krishnan, *Ind Phil P* 101 where he compares Aristotle's deity, the unmoved mover. For details cp. my article on *Karmavijñāna* in the *Oriental College Magazine* 1928 See also Keith, *Rel and Phil of the Veda Vol II Ch XXVI* pp. 433-39 As for the Brāhmaṇas, these in various places are conscious of higher philosophical truths, which they ignore and turn to ritual purposes Cp Deussen, *Gesch. der Phil I* 1, 172 80 Keith does not agree with this view and follows Oltmanns who rejects Deussen's view cp *L' Histoire des idées théosophiques I* 127

these gods¹, and of the text that accompanied the act of the gift. At this stage, he earnestly questioned the duality in all phases of life, theoretic as well as practical. He no longer felt diffident to receive from rivals² what was wanting in his own, and also preferred to learn their texts besides his own³. Slowly and gradually he arrived at that text of a Veda, which seemed to him as the basic one, and this he adopted, leaving others to take their own care⁴. For its preservation he did not require

1. Tylor, *Primitive Culture*, Vol. II, p. 375. Feist, *Kultur der Indo-germanen* p. 351, though he prefers to trace all worship to the cult of the dead.

2. yan nāmnātam svaśākhāyām paroḥtamavirodhi yat |
vidvadbhis tadanuṣṭheya magnihotrādi-karmavat ||

Karmapradīpa I. 3. Cp. Müller, *Anc. Sanskrit Lit.* pp. 51, 364-65, 375.

3 vedānadhītya vedau vā vedam vāpi yathākramam |

Manu III. 2.

Cp. Medhātithi on it "vedaśabdaḥ śākhāvacano vyākhyātaḥ | tīraḥ śākhā adhiyāta dve ekām vaikaikasmād vedānna tvekaśmādeve | "

4. Cp. Müller, *Anc. Skt. Lit.* p. 119. The differences between the various Śākhās of the SV. are hardly of any importance, at any rate, not more than what are found in the different mss. of any ancient author. But with regard to the omission of *y* and *v* the Śākhās actually differed. Already Sāmaśramin pointed out in his *Trayīṭikā* (p. 249) that the Kauthumas sing hā-u, while the Rāṇāyaṇīyas sing hāv-u (cp. Caland, *JS. Einl.* p. 11). I may add here that according to RT. 108 all Śākhās omit *y*, when it is followed by a consonant; Naigī omits it, when it comes in between the two vowels (159); but some prescribe the omission of *v* also, when it is so placed (160). The Kauthumas, however, prescribe the half omission of *y* and *v* (161), and this may, probably, be the reason for the inconsistency (so ably noted by R. Simon, *PpS.* 527) to be found in the SV. mss. with regard to the preservation or otherwise of *y* and *v*. The mss. of North India preserve *y*, while those from the south invariably omit it; and this is significant, because we have already noted that the Kauthumas spread in later times towards Gujrat, and south is yet the home of the Rāṇāyaṇīyas. And the rule 159 suggests that south was also the home of the followers of the Naigeyaśākhā.

In the Brāhmanic period, when sacrifice occupied the centre of the stage, these minor differences were made much of; the priests justifying their own and running down those of others. But with the tide of generalisation all

more than one Prātiśākhya, and the best of the lot he adopted, with minor modifications, recording therein the chief variations found in others, as the views of *eke*, *apare*, *ācāryaḥ* and so on¹.

And this is exactly what seems to have happened in the case of our treatise; and although it primarily belongs to the *Kaṭhuma* school, yet it records meagerly, of course, the views of others.

II

And the fact that Rktaṇtra is a Prātiśākhya of the SV. introduces us to the important question "*What is Sāmaveda ?*"

By the SV. we generally take a number of unconnected verses, nearly all of which occur in the RV. and which modified in several ways, are chanted mostly at the *soma* sacrifices. The words, together with the chant, are supposed to constitute a *sāman*, and when the SV. is referred to, only the *Samhitā*, or collection of words are meant. But this is erroneous. Scholars of old times understood by a *sāman*, a melody or chant, independent of the words. The earliest records, available at present, bear out the distinction between melody and words, and treat the first as more important than the latter. This will be clear from the following:-

1. The distinction was clear in the time of the RV. Cp:-

(a) *gāyatreṇa prati mimīte arkamārkeṇa sāma traiṣṭubhena vākam* ।

vākena vākaṃ dvipadā catuspadākṣareṇa mimate sapta vāṇīḥ ॥

RV. I. 164. 24.

was changed, differences which were already nominal, were yet minimised, till the major Śākha got the better of minor ones. And just as there remained only the major Śākha or Śākhās of a Veda current, so also there remained only the major Prātiśākhya of a Veda current

1. For details see Whitney, TPr. pp. 432-433, Luders, Vyāsaśikṣā pp. 21-22. The discussion on the nature and scope of Prātiśākhyas held by Muller in Anc. Skt. Lit. pp. 116-146 is yet the most exhaustive

2 Cp. also RV. I 10 1, 5 4, 4, 14, 8 3, 22, Muller, Anc. Skt. Lit p 489.

(b) tasmād yajñāt sarvahuta ṛcaḥ sāmāni jajñire |
chandāṃsi jajñire | RV. 10. 4. 8.

(c) The word 'ṛciṣama' which means¹ 'he for whom the sāman is sung upon the ṛc' occurs eight times in the RV.

2. The distinction was clear in the time of the AV. Cp:-
ṛcaḥ sāmāni chandāṃsi purāṇaṃ yajuṣā saha |
AV. 11. 4. 2. 4

3. It was known to Yāska who says:-
sāma sammitamṛcā | asyatervārcā samaṃ mena iti nai-
dānāḥ || Nir. vii, 12.

4. It was clear to Jaimini who says:-

(a) gītiṣu sāmākhyā (II. 1. 36) |

(b) In order to press home the distinction, Jaimini devotes the second pāda of the seventh chapter to a discussion on *rathaṃtara* and includes in the end that the word *rathaṃtara* denotes a sāman, independent of the words, on which it is sung.

(c) The distinction is again stressed² in ix. 2. 1. 1.

5. It was known to Bhartṛhari who states:-
ṛco vā gītimātraṃ vā sāma dravyāntaraṃ na tu |
gītibhedād yigrhyante tā eva vikṛtā ṛcaḥ ||

Vākyapadīya I. 109.

6. Bhaṭṭa bhāskara and Sāyaṇa assign different ṛṣis to the ṛc and the sāman, sung upon it.

7. A sāman is sung upon the ṛk. The idiom is old and repeatedly occurs in the Brāhmaṇas. Were there no distinction between the two, the idiom would have been meaningless.

1. Bloomfield, The god Indra and the SV, WZKM, xvii. 1903 p. 156. The Rel. of the Veda p. 38. See also JAOS. xxi. 66. Against this Cp. Otto Böhtlingk in BKS GW. April, p. 7 ff.

2. sāmoktibṛhadādyuktī gītāyāmṛci kevale |
gāne vā gāna evoti smāryate saptamoditam ||

It is thus clear from the above, that since the time of the RV. on to that of Sāyaṇa, scholars knew that there was a distinction between the Ṛk and the Sāman and that the two were not inseparable. The Sāman, in short, was a tune, a melody, sung to the words, and the SV. was a collection of the sāman.

The origin of the Sāman.

Three things stand out clear in the gānas of the SV:—

1. The gānas are practically strings of "dadas" hā-is and hā-us¹.
2. The same words are repeated in them again and again.
3. Words are badly mutilated to suit the melody.

Bearing these points in our mind, we may proceed with our enquiry thus:—

It was natural for the awakening humanity to worship the sun and the moon, the vegetation and other natural forces.² To them dawn, sun and moon, sky, thunder and lightning, atmosphere and wind, earth and fire were all gods, and they worshipped them for happiness and success, health and long life. Music, in one form or other, may have accompanied this worship.

It has been noted that some of the African tribes dance and sing more frequently at the time of the 'palm wine season' and the Bechuanas indulge in singing more specially at the time of rains and the harvest.³ Music is, thus, the natural outlet for the feelings of joy.

1. B. Faddegon, *Ritualistic Dadaism*, *Acta Orientalia*, V. 1926, 177 et seq

2. Rivers, *Medicine Magic and Religion* p. 57, Walter Woodburn Hyde, *the Religion of Greece in "Religions of the Past and Present"*. p 271.

3. Richard Wallscheck, *Primitive Music* p. 163 With regard to the native tribes of Central Australia cp the remarkable researches of Prof Baldwin Spencer and Mr. F J. Gillen

When the primitive man saw that the gods (of nature) were withholding their boons from him, he attempted to influence them by shouts, beating of tamtams and other frantic exhortations,¹ and a similar phenomenon may even now be noted in the Indian villages, when crops are about to fail for want of rain. This theory, viz., that self-exciting noises produce a corresponding outside effect is termed *shamanism*.²

1. The fundamental concept bearing on the religious life of the primitive man is the belief in the existence of magic power, which may influence the life of man and which in turn might be influenced by human activity. This idea of magic power is one of the fundamental concepts which occur among all primitive tribes. This sympathetic magic, whereby like is expected to produce like has been discussed in details by Frazer in *Golden Bough*, Part I where he describes at length the rights for the control of rain in pp. 247-311. Cp. also Andrew Lang, *Myth Ritual and Religion* Vol. I, Chapter IV. That sympathetic magic was at the very root of Roman Religion has been ably shown by George Depue Hadzsits "Religion of the Romans" in *Religions of Past and Present* p. 319, Traces of this kind of magic are detected in the Greek religion by Gilbert Murray in his *Four Stages of Greek Religion* p. 16. H. Oldenberg in his able book *Die Religion des Veda* suggested that in the evolution of thought, magic, as representing a lower intellectual stratum, has probably everywhere preceded religion. Cp. Warde Fowler, who insists on the distinction of religion and magic, but seems to believe that magic precedes religion in order of time. *Religious Experiences of the Roman People* pp. 47-9, 188, 223-24. See N. N. Law, *Ancient Indian Polity* Ch. IX. See also Keith, *Rel. and Phil. of the Veda*, I, pp. 46-48.

2. (a) The English words *shaman* and *shamanism*, seem of Hindu origin, being the Western reproduction of the Pali-Buddhist *samāṇa*, which is Sanskrit *śramāṇa*. cf. Bloomfield, *The god Indra and Sāmaveda*, WZKM. xvii. p. 164; Winternitz, *Gesch. der Ind. Lit.* I. 168 n. 2. Comparative study has revealed that *shamanism* was "the native religion of the Ural-Altaic peoples from Behring Straits to the borders of Scandinavia" and "probably of the early Mongol-Tartar peoples and others akin to them, for example in China and Tibet." Evans (Ivon H. N) *Studies in Religion, Folklore and Custom in British North Borneo and the Malaya Peninsula*, pp. 217-265. For the practices of *shamanism* cp. R. O.

The practice of *shamanism* must have been current in India, long before the Aryans came and conquered the Dāsas. Here Indra, the rain-god, that splits at the time of the monsoon the cloud-serpent, that overlays the sky,¹ has ever been devoutly worshipped and to help such a god with wild exhortations suits both the underlying event, as well as the primitive man.

And here waited all the rough material, (if the Aryans had not their own) for the r̥sifying touch of the Vedic priest, in order to be transformed into the SV. That this was so is indicated by Indra's prominence in connection with the chant of the *sāman*. Of the 59 decades of the *Pūrvārcika*, 36 in the middle of the book are addressed to Indra; 12 at the beginning belong to Agni; and 11 at the end go to Soma. Both these divisions are subordinate to the worship of Indra.³

In the primitive vocal music there need not be a union of poetry and music.² Mr. de Montes recording the text of a North Indian American song says.--

"At first they sang" "halvet ho ho he" then the general outcry followed "e", then again "Egrigna han he hu" and at last the ominous "ta-meia allelujah tamera don veni han han he he".³

Winstedt, Shaman Śaiva and Sufi, Chapter III. "The Malaya Magician"

- (b) The similarity of the words *shaman* and *saman* is, however, accidental. Bloomfield, WZKM, xvii p 164. The meaning and the derivation of the word *sāman* are obscure. But for the word *gai*, we should not be able to guess at its meaning. Cp. 'pragltam mantravākyam sāmāśabdenocyate' quoted in Ind. Stud IV. p. 141

1 The myth of Indra, Vṛtra and the waters "represents a specialised poetic treatment of a myth of thunderstorm cloud and rain." Bloomfield, Rel of the Veda p 181. For the masterly theory of Hillebrandt "that Vṛtra represents the frozen winter, while Indra represents the sprung or summer sun cp Ved Myth, Vol III, p 157 ff. For Indra's close connection with soma cp E. Sieg, Indra und der soma raub nach dem R̥gveda in BLWGI. pp 228-239

2. Primitive Music p 174

3. Primitive Music p. 173

This phenomenon must not be claimed as the monopoly of North Indian American songs, and the similar can easily be noted in Indian village songs even to-day. And have we not noted the monotonous string of “dadas” hā-is and hā-us in the gānas of the SV. ? And do we not find an order for singing, similar to that just noted, prescribed for the five *bhaktis*¹ of a sāman ?

In singing some tribes (N. Am.) use the sounds “he” “ah”, no intelligible words being uttered. Among other tribes the songs are monotonous chants, extending over but few notes, varied by occasional howls and whoops in some of the more spirited melodies. Words are often borrowed from other tribes without being understood.² The Macusi Indians in Guina amuse themselves for hours with singing a monotonous song whose words “hāi-a” “hāi-a” have no further significance.³ And what significance, on earth, do we find in the so-called *stobhas* of the SV. which run exactly parallel to the “hāi-as” “hāi-as” just noted ? And is not an attempt, like the one made by CHU. to explain these hā-is and hā-us, hopelessly barren of any positive gain⁴ ?

1. Divisions of a sāman. Cp. Lāty. VI. 1. 14; Drāh. III. 4. 12; Burnell, Arbr. Int. p. xxv; R. Simon, PpS. p. 522; his Pañcavidhasūtra; The Vedic Chant on the divisions of a sāman and my note on the rule 39.

2. Jeswitt. Narr. p. 87.

3. Primitive Music. p. 173.

4. Cp. Sāmaśramin, Trayisaṃgraha, where he makes an attempt at the elucidation of the *stambhikagāna*. He severely attacks Sāyaṇa for not giving the real interpretation of the *stobhas* and accuses him of the ignorance of the Sāmavedic tradition. But the charge, levelled against Sāyaṇa seems presumptuous and no ingenuity on earth can satisfactorily make out any sense of the dadaisms, which are nothing but a mystic dance on vowels and consonants and are meant to be an empty adornment to the songs. The sense of the words can not possibly have been understood in the mutilated form in which the chants were sung, and this shows that their religious value lay not in the matter, but in the form, and the sāmans have been rightly compared to the revival hymns beloved by the African negro in the new world. Cp.

It is a striking feature of the primitive songs that they Keith, *The Rel. and Phil. of the Veda* Vol. I p. 16. Besides, the ancient *chandogās* adopted these senseless syllables in order to obscure the meaning of the *Rgverses* and thus heighten the sanctity of the same in the mind of the gods, who love the apocryptic. Even today children in Holland sing in honour of "all the swimming ducklets" the empty, the riming and alliterating refrain "falde ralde riro falde-ralde-ra" (B. Faddegon, *Ritualistic Dadaism*, *Acta Orientalia* V. 1926, p. 182) and no serious student has ever worried himself about the meaning of these songs, and I see no reason why the same may not hold good in case of the SV. songs, more particularly about the *Channagāna*, where there is no *ṛk* at all but only a string of the *stobhas*. By this, I do not mean that the SV. as a whole is meaningless, all that I want to press home is this, that the "dadaisms" which form so prominent a feature of the SV. *gānas*, are meaningless, that they, as the bearer of the various melodies, were current in India long before the Aryans came here, that the Vedic *ṛsis* adopted them, along with the tunes, that they applied to these meaningless words the *Rgverses* in general, and *Yajus* formulas in a few cases, and thus ultimately built the fine edifice of the extant SV. And this is not at all surprising, when we note that just as Vedic Indian race was, like others great in history, the product of a blend of populations—conquering Aryan tribes from somewhere in Central Europe settling among the indigenous stocks, (Keith *The Rel. and Phil. of the Veda*, Vol I pp. 12-14.) so also the religion of the Vedic India was a product of a blend of the early Indo-European or Aryan beliefs with the older cult, ideas, and practices of the indigenous peoples, and the same process of blending is not an impossibility in case of the Vedic music. These two sources continued interwoven all through the history of Indian religion and are discernible in both theology and ritual. To disentangle them is the first and the most difficult problem for the historian of the Indian life and I regret I am not competent to undertake the inquiry into this at this stage. Eminent scholars like Elliot Smith (*Migrations of early Culture*), Fleure in Slater, (*The Dravidian Element in Indian Culture*), Perry, (*Children of the Sun*), G. W. Brown (*Studies in honour of Bloomfield* pp. 75 ff.), S. Levi (*Journal Asiatique* cccii 1-56), Hornell (*Memoirs of the Asiatic Society of Bengal*, VII iii (1920) have tried to ascertain, the amount of pre-dravidian and dravidian influence on Vedic civilisation, but many of the arguments advanced by these scholars are of dubious character (cp Keith, *Rel and Phil. of the Veda* Vol. II p. 633) and they do not carry us beyond the region of conjecture. In his admirable book on "Outlines of a Systematic Anthropology of Asia" Prof. Giuffrida Ruggeri has made a laudable effort to determine the characteristics of the pre-dravidians but we must admit that much of it is again based on ingenious conjectures alone.

pay little attention to the grammatical structure of the sentence and the logical order of words; and it has been noted the Andamanese songs, that in them, the words in their poetic form, are so mutilated to suit the metre, as to be scarce recognisable.¹ And this is exactly what we find in the gān of the SV., where the ṛc are badly harnessed into the service of the melody, and words are mutilated beyond recognition.

Such was the rough ground on which the Vedic priests raised their stately mansion of the SV. and we may well conclude our inquiry into the origin of the Sāman in the following words of Bloomfield:—

“The Sāmaveda” represents little more than the secondary employment in the service of religion of popular music and other quasi-musical noises. These were developed and refined in the course of civilisation, and worked into the formal ritual of Brāhmanism, in order to add an element of beauty and emotion.⁴”

III

The SV. i.e. the Ārcika.

It has been shown in details that the word sāman denoted a melody and not the ṛc, which is sung upon it. But

1. Primitive music p. 174.

2. Some of the verses of the RV. met with in the SV. offer divergent readings; and it has been supposed that a more ancient text might be recognised in them (Benfey, SV. Einl. pp. xxvii-xxviii). But Theodore Aufrecht (in Preface to his ed. of the Hymns of the RV. 2nd ed. Bonn, 1877 II. xxxviii ff.) and Oldenberg (Hymnen des RV. I pp. 289 ff.) have shown details that the SV. variants are mainly due to arbitrary—intentional or accidental alterations—alterations that also occur elsewhere, where words were prepared for music. Cp. Burnell, Arb. Int. p. xvi; Keith, The Rel. Phil. of the Veda Vol I, p. 1.

3. Cp. also Keith, The Rel. and Phil. of the Veda Vol I, p. 16. According to Winternitz, sāman probably means “propitiatory song” a means of appeasing gods and demons. The word sāman also occurs in the sense of “mildness; soothing words.” Gesch. der Ind. Litt. Vol. I, p. 146.

4. Rel. of the Veda, p. 39.

course of time the idea got reversed, and theologians began to conceive that the melody originated from the ṛc, giving rise to the expression that "this ot that sāmān is sung upon a particular stanza". The stanza thus ultimately came to be termed as *yonī* i.e. the womb, out of which the melody came forth.¹ And the SV. i.e. the Ārcika (the collection of ṛc) is nothing but a collection of 585 *yonis*, or single stanzas, which are sung to about double the number of different tunes² It is thus only a kind of text book,³ containing the stanzas, which are to be memorised for *making upon them* the sāmān melodies

This collection of verses, taken as a whole, came to be regarded as comprising —

(A)

(B)

Gānas (song-books)

Rc (the collection of verses).

- 1 Grāmegeyagāna⁴
- 2 Aranyegeyagāna.⁵
- 3 Ūhagāna

1. Pūrvārcika.
2. Āranyaka samhitā.
- 3 Uttarārcika.

1.(a) Cp Sayana, SV Vol I p 22 'chandonamake granthe nanāvidhā nam samnam yonibhuta evaical pathital."

(b) e.g. Sayana in his commentary on the PVB (xii 6. 5) says "pra mamhīsthāya gayata itī yonavutpannam sama pra mamhīsthā śabdayogat pra mamhīsthayam tadatīa tīce kartavyam ||

2. Oldenberg GGA 1906, 712 A.

3. The first man to use the suggestive term 'libretto' for this was Muller, Cp. Anc Sanskrit Literature p 473. For the relation of RV. with the SV. cp the very illuminating article of Oldenberg "Rgveda-samhitā and Sāmavedārcika in ZDMG xxxviii

4 This is also called 'geyam' or 'yoniganam', because it records those chants, which constitute *yonī* to those, that occur in the Uha and Ūhagānas. This is also termed 'Veyagana' or "Ve_oana"—*dvīṭīyam*—because it was taught after the study of Aranyegeya_oana. Cp Samaśramin Satyavrata, Trayitika, p 205 For Āvir_oana and Channagana cp Trayitika pp, 205 210 11, respectively

5 This is also called 'rahasyagana' or 'rahasya' Cp Caland, JS Dnl. p 8, PVB Int p xi, R Simon, PpS p 501

4. Ūhyagāna.¹

The relation between the Pūrvārcika and the first two gānas is obvious. The Pūrvārcika records single verses. With each of these, corresponds a single sāman, which bears a particular name derived from the ṛṣi who is said to have seen that sāman. These sāmāns are registered in the Grāmegeyagāna and Aranyegeyagāna.

The arrangement of the *yonis* is systematic and the Ārcika is divided into three parts; (1) the first (1-114) is addressed to Agni, (2) the second (115-466) belongs to Indra, (3) and the third (467-415) goes to Soma. These again are mostly sub-divided according to the metre of the text.

Uttarārcika.

The Uttarārcika does not register single verses, but is comprised of triplets² i.e. *pragāthas*. In the Uttarārcika the *rc* are arranged for the formation of *stomas*; thus the aim of this collection is purely practical.³ On the whole, the first verse of the triplet occurs in the Pūrvārcika,⁴ which indicates

1. Ūhya is an abbreviation of Ūharahasya. Cp. Burnell, Catalogue of a collection of Skt. Mss. Part I, Vedic Mss. p. 48. See also Medhātithi on Manu, II, 262 and Sāmaśramin Trayīṭikā p. 10.

2. (a) The triplets are known to the RV. Cp. 'vācamasṭāpadīm nava-padīm' viii, 76, 12. See also 'tisṛbhirhi sāma sammitam' Ait. III, 23. Against this cp. RV. I, 164, 24 which states that the sāman 'consists of one verse'. We can reconcile the two conflicting views by assuming that RV. I, 164, 24 records the earlier stage of the Sāman, when it did actually consist of one verse, while viii, 76, 12 registers the later stage, when the Sāman had grown into a triplet. Of this more later on.

(b) *pragātha* is derived from *grath* and not from *gā*. So Sāyaṇa 'prakarṣeṇa granthanam yatra sa pragāthah' SV. Vol. I. p. 28, Cp. Ind. Studien viii, 25; Ludwig, Mantralitteratur, p. 58, and Oldenberg, ZDMG, xxxviii. p. 446.

3. Oldenberg, ZDMG. xxxviii. p. 465.

4. (a) Cp. Śeṣagiri Śāstri, A Descriptive Catalogue of the Sanskrit Mss. of the Governmental Mss. Library in Madras. Vol. I, Vedic Literature, first part, p. 73.

that the melody, which belongs to this verse, is to be applied to the whole triplet. For example, the first verse of the triplet in the Uttarārcika (1. 1. 1 2-32) beginning "kayā naścitra ā bhuvadūti" occurs in the Pūrvārcika¹ (2. 2. 3 5-169). According to the Grāmegeyagāna this ṛc is sung to the *vāmadevya* sāman. On this melody then, the three verses of the Uttarārcika (32-34) must be chanted at the sacrifice.

Ūha and Ūhya

These three verses as used at the sacrifice are recorded in the Ūhagāna. Thus we see that like the Uttarārcika, the aim of the Ūhagāna, is also purely practical.

The Ūhagāna runs parallel to the Uttarārcika and Grāmegeyagāna, while the Ūhyagāna runs parallel to the Aranyegeyagāna.

The names are clear "uhati" means adapts, the Ūhagāna² contains the melodies of the Grāmegeyagāna, but adapting them and working them out, so as they are chanted at the sacrifice, and the Ūhyagāna adapting the melodies of the Aranyegeyagāna, to the verses on which they must be chanted at the private sacrifices³.

- (b) There is a great number of verses in the Uttarārcika, that have no correspondent verse in the Pūrvārcika. This is explained by the fact that these verses, which belong to the *pratah savana* are chanted on the *gayatri* melody which is given as an appendix to the editions of the Grāmegeyagāna (SV Vol 1, p 601). On the other hand, many *yonis* are found in the Pūrvārcika which have no correspondent verses in the Uttarārcika. This is explained by the fact that *sāmans* are chanted not only at the Soma sacrifices but on many other occasions as well. These *sāmans* were chanted as solo mostly by the Prastotr. Cp Caland JS Einl p 5, PVB Int pp x xi. The difficulty was pointed out by Oldenberg in his brilliant article on Rgveda samhita and Sāmavedārcika in ZDMG xxxviii and was repeated by Winternitz in his Gesch der Ind Lit I p 145.

1 JNMV ix 2 1-2

2 Cp N on P1S viii 87 "uhatītan grāmegeyavat uhyagāna aranyageyavat | " See also Caland JS Einl pp 7-8.

The names of the basic gānas are also clear. The Grāmegeyagāna contains those sāmāns that were studied in the community, while the Araṇyegeyagāna registers those sāmāns that, because they were too sacred and mysterious, were studied in the forest, outside the community.

IV

Chronology of the SV.

Little can be said with certainty about the chronology of the SV. We have rather to work on guess and conjecture. Scholars are unanimous in showing that sacrifice was the dominant note of the Vedic life.¹ The Vedic ṛṣi rose early in the morning to a sacrificial day ; morning, noon and evening were spent in offering gifts to the gods. The soma was ever present at the sacrifices.

The Vedic ṛṣi was strictly utilitarian and practical; and we know from the researches of antiquarians² that in a

1. The poetry and religion of the Veda display in the highest degree the mark of the sacredotalism. Ludwig, III. 262; Haug, Preface to Translation of AB. p. 36. The Vedic concept of the 'ṛta' is essentially the *Tao* of the Chines. It is lofty and very inspiring, but in the hands of the Vedic priests, it becomes little more than an apotheosis of the system of sacrifice, around which the Ṛgvedic religion centres. For the conception of 'ṛta' cp. Bloomfield, *Rel. of the Veda* pp. 12, 20; Franklin Edgerton in the *Religions of Past and Present* p. 117; Keith, *The Rel. and Phil. of the Veda Vol I* p. 35, 83, 84; Bettey Heimann, *Varuṇa-Ṛta-Karma* in *BLWGI.* pp. 207-11. The fact was well known to Sāyaṇa, who interprets the Vedas according to the requirements of the ritual. Cp. his śloka in the Preface to the Sāmaveda, where he distinctly accords the highest position to the Yajurveda, which according to Macdonell (*Hist. of Skt. Lit.* p. 46) shows the exceeding growth of ritualism. Cp. also Winternitz, *Gesch. der Ind. Lit.* I. p. 245; Schroeder, *Indiens Lit. und Cul.* p. 90; Keith, *The Rel. and Phil. of the Veda Vol. I.* p. 24.

2. Cp. Burnell, *Arbr. Int.* p. xxxii. With the growth of the personal god sprang up the distinctly ethic parts of the creed—those moral laws which, as Mr. Spencer says, are subsequent to the beginning of worship. There is little moral teaching in the works of nature: the thunder and the lightning are not bound by the laws which bind us; "the wind bloweth where it listeth; and it is wasted breath to cavil at the doings of these things". The character

primitive sacred literature, the parts most liable to systematisation are codes of ceremonial law and rituals and similar practically useful parts. This has been so always and everywhere, and the same may have happened in Vedic India, and although in their rudimentary forms the two *gānas* (i.e. the *Grāmegeyagāna* and *Aranyegeyagāna*) may have existed side by side since prehistoric times, yet the *Grāmegeyagāna* which being more suitable to an advanced stage in civilisation, came to be associated with the favourite soma sacrifices, received the arrangement first and the *Aranyegeyagāna*, that evidently belongs to an early stage of Vedic civilisation,¹ received the little arrangement it has, comparatively later.

Was the Pūrvārca or was the Uttarārca older ?

And now we come to a very perplexing question, one which is of the utmost importance for a true perspective of the historic development of the older SV texts, and for the correct interpretation of many a passage in the PVB. and

of the early gods is discovered by observing what they are and not by considering what they should be. But when the god has clothed himself in human guise he has taken therewith the responsibilities of human nature, he must, in the end, conform to one code of right and wrong. For details see Charles Francis Keary *Primitive Belief* pp. 48-49.

1. Burnell Arbr. Introduction p. xxxiv. The precise nature and function of the *Aranyegeyagāna* seems yet undecided. May be, this appellation was given to these songs because they were too archaic to be made any sense of even by the priests who consequently holding them as mystic and magical, reserved for charms, witchcraft, medicine and other homely practices which require privacy and are generally meant for plainer people, as opposed to the Soma sacrifices which were meant for the rich lay sacrificers. It seems that the primitive Aryan used these magical songs in order to control and make subject to his will spiritual agencies which he thought he could so control while the more powerful spirits i.e. the gods he sought to propitiate by sacrifices accompanied by *Grāmegeya* songs thus securing their assistance by winning their goodwill since he thought he had not the power to compel them. Thus while the *Grāmegeyagāna* is meant to be sung at Soma sacrifices the *Aranyegeyagāna* may have been originally meant to be sung at the charms

kindred texts. The question is '*was the Pūrvārcika or was the Uttarārcika the older part ?*'

Now the fact that Uttarārcika is a collection of verses on which the sāmāns had to be chanted, would make it appear older than the Pūrvārcika, which is a collection of verses, that served to register the melodies, on which the triplets had to be chanted ; and this was the view, which the late Dr. Caland held, before he wrote Introduction to his monumental work, the PVB., and to which he, in a different form, of course, tenaciously adhered up to the last.¹

But here comes one difficulty, and that is this, that the Uttarārcika is nowhere quoted in the Sāmavidhānabrāhmaṇa, and that Pūrvārcika alone is mentioned in the *vratas*. Starting on this clue, Oldenberg² showed that the Uttarārcika was much later than the Pūrvārcika, the Brāhmaṇa, the Maśākakalpa, and Śrautasūtras of Lāṭyāyana and Drāhyāyana, and this view has been virtually accepted by Dr. Caland, only with one reservation, namely, that there existed a forerunner to this Uttarārcika, which existed even before the Pūrvārcika. Caland works out this view in brief as follows:—

PVB. (iv. 4. 1) states that in a certain case a great number of verses had to be taken direct from the Saṃhitā. The expression 'saṃbhārya' which denotes a complex of verses to be taken from different parts of the Veda, does not suit the

1. Pūrvārcika older than Uttarārcika. Winternitz, *Gesch. der. Ind Lit.* I, p. 145. Against this cp. Caland, *JS. Einl.* pp. 4, 9, *PVB. Int.* p. xiv.

2. For the discussion on the priority of Pūrvārcika I have mainly drawn from Caland *JS. Einl.*, *Jaimbr. Einl.*, *PVB. Int.* and *WZKM.* Vol. xxii p. 436. The brilliant paper of Oldenberg in the *JGOS*, Vol. xxxviii was not available in any library of Lahore and I regret I could not profit by it. I have also not had the privilege of reading his paper 'De Wording Van der Sāmaveda in Verse en Meded. der Kon. Ak. v. Wetensch. Abd. Lett.' c 4. R. Deed ix and Caland's "Over en nit het Jaiminiyabrāhmaṇa in the same journal 5 c. Reeks Deel I p. 5 seq., because both are in Dutch for which I have to consult the Dictionary at every step, and the material has been repeated by Caland in *PVB.* with greater clearness and precision.

SV, because in the Uttarārcika, the verses are given as a whole, all after one another, and this indicates that the compilers of the Brāhmaṇa were not aware of the Uttarārcika, and that the chanters knew the RV. from which they used to derive this material. Starting on this line Caland concludes -

The chanters were acquainted with the RV. From this they drew their verses, and on them they chanted the lauds at the Soma sacrifices. In order to facilitate the memorisation of this material a double register was composed, one of the melodies, and one of the verses, on which the melodies were chanted. The register of melodies was taken up, and the same was considered as the bearer of the melody. *The second register, that of verses, was the fore runner of the Uttarārcika.* To the first collection of songs were added later on, songs of a different kind, that had to be chanted by a single chanter at other occasions. Besides these song books, arose, at the same time, the second register the Pūrvārcika and the Āranyaka. Thereupon a Brāhmaṇa arose. Based on this Brāhmaṇa, the Ārśeyakalpa was composed by Maśaka. Based on these two works, the Śrautasūtras were composed by Lātyāyana and Drāhyāyana. Then only the Uttarārcika was compiled, which contained the verses from the RV. arranged in their regular order, in which they were used at the Soma sacrifices.

This is, in brief, the trend of thought followed by Caland. But the difficulty, for the solution of which, he took all this labour, remains yet the same. We are yet entitled to ask him "why there is not the slightest reference to this fore-runner of the Uttarārcika in the Brāhmaṇa, Śrautasūtras and the Atharvaparīṣista, and why the SVbr. does not anywhere even hint at it." We talk of older Rgvedas,¹ and for them we have some reason, but such is not the case with the Uttarārcika.

1 Muller, *Anc Skt Lit* pp 464, 465, 495-96, Benfey, *SV Einl* pp xxix-xxx, Burnell, *Arbr Int* xxxii, Caland, *PVB Int* p xvi.

Caland seems to think, that from the beginning of the Soma sacrifices, the chanters used to sing their lauds not on one verse, but on a triplet, and this is the only reason why, in one form or other, he makes out the register containing triplets, earlier than the one containing solo-verses.¹ But this is erroneous, and although native scholars are unanimous in prescribing the use of triplets at the Soma sacrifices, yet there seems nothing to prevent us from assuming, that in earlier times, when the sacrifice was yet in its crude form, the priests sang their melodies on solo verses, and that with the growth of the ritualism the idea of using triplets arose, the two stages of development being successively recorded in the Pūrvārcika and Uttarārcika. That this actually happened so, will be clear from the RV. 1. 164. 24, which runs :—

gāyatrena prati mimīte arkamarkaṇa sāma traistubhena vākam |
vākena vākam dvipadā catuspadākṣareṇa mimate sapta vāṇiḥ ||

Sāyaṇa raises the following discussion on “arkeṇa sāma.”
“arkeṇa sāma | uktalakṣaṇena mantreṇa sāma, gāyatraratham-
tarasañjñakam sāma pratimimīte | *nanvekaṃ sāma tṛce kriyata
iti tisṛṣvekaṃ sāma vihitamato'rkaiḥ sāmetyi vaktavyaṃ katha-
mucyate' rkeṇeti na | vastuta ekam sāmāikasyāmṛcyāmārūddham |
paścādanyonyaṃ taduttarayorgāyatīti ityatideśaḥ | ata ekavacana-
maviruddham ||*”

Thus the question of the priority of the Pūrvārcika to the Uttarārcikā is settled once for all, and so far we perfectly agree with Oldenberg. But the assumption that Uttarārcika is later than the Brāhmaṇa, Ārṣeyakalpa and the Śrautasūtras, must not go unchallenged. The reasons are as follows :—

(a) The assumption militates against the general trend of

1. “That from the oldest times on the chanters must have had at their disposal a certain collection of tristichs and *pragāthas*, that served them at the Soma-rites for chanting after their melodies; that this collection might have been the forerunner of the Uttarārcika, as it is known to us now-a-days”. Caland, PVB. Int. p. xvii.

the development of Vedic literature.¹

- (b) In the PVB., the terms pentastichs, daśastichs and the like are used.² How could we know which verses were intended, unless we assume, that the Uttarārcika existed at the time, when the Brāhmaṇa was compiled. Caland meets this difficulty by assuming that the authors of the Brāhmaṇa allowed here a free choice, while in later times, the compilers of the Uttarārcika fixed these verses probably in accordance with the Jaiminīya-brāhmaṇa, which states by citing their opening words, which verses had to be employed. But taking into account the deep animosity that obtained among the followers of the different śākhās of a Veda in the Brāhmanic period, it seems simply unreasonable that the *Kaṭhuma* Uttarārcika was built on the basis of the *Jaiminīya* Brāhmaṇa.
- (c) We read in the PVB.³ (viii. 8. 26) that the first verse is a *kakup*, then comes an *uṣṇih*, then a *pura uṣṇih kakup*. Now RV. viii. 98. 9 (*pura uṣṇih*) is not an *anustup*, while SV. II. 62 at the end has four syllables more and hence tallies with the Brāhmaṇa. This addition of four syllables, as Caland has already shown, seems very old, because the Jaiminīyas also have it in their Uttarārcika. Must we not infer from this that the authors of the

1. The development of the Vedic literature may be briefly put thus:-

- (1) Samhitās i. e. collection of hymns, prayers and sacred formulas, charms for witchcraft, medicine and other homely practices.
- (2) Exposition of the sacrifice, illustrated by legends.
- (3) Speculations of the higher sort, growing up in connection with and out of the simpler beliefs.
- (4) A considerable body of set rules for conduct in everyday secular life.

2. I owe the arguments put as (b) and (c) to Caland's PVB. Int. p. xvi.

3. Cp. Sāmaśramin Satyavrata, Trayīparicaya p. 105; Caland, J. S.

Brāhmaṇa were acquainted with the Uttarārcika ? The explanation that the compilers of the Uttarārcika changed the Ṛkverse, so as to bring it in harmony with the Brāhmaṇa seems flat and does not get home.

- (d) One thing more. Had the Uttarārcika been so very late, tradition must have had assigned its authorship to a definite person, or like the Ūha and Ūhyagāna,¹ must have at least known that the same is *pauruṣeya*. But nothing of the kind is heard with regard to the Uttarārcika.

But admitting that the Uttarārcika is older than the Brāhmaṇa, how to explain the expression "saṃbhārya" found in the Brāhmaṇa, and how to solve the difficulty raised by Oldenberg ?

- (a) As for the first, we may admit that the three portions, referred to, may be later addition to the Ārcika, presuming, of course, that the text of the Brāhmaṇa in the three places is reliable and refers to the verses in that very order in which they are found in the Uttarārcika.
- (b) The solution of the second difficulty may be something like this. The real SV. i.e. the melodies were registered in the Grāmegeyagāna. With each melody of this gāna corresponds a single verse in the Pūrvārcika. And because a single melody of a single verse (of the Pūrvārcika) was chanted on a single triplet of the Uttarārcika, one verse of the Pūrvārcika was virtually equal to one triplet of the Uttarārcika. And thus holding the Pūrvārcika as the basis of the Uttarārcika, scholars preferred to mention the first instead of the latter.

Oldenberg will himself admit that (a) the Soma sacrifices existed long before the Brāhmaṇa, (b) that at them the melodies were sung on triplets, (c) that the priest was strictly practical and utilitarian, (d) and that the Brāhmaṇa is a mystic exposition of the age-long ritual. If he once admits

these points, he will have, naturally, to assume that the priest forthwith registered these triplets into a register long before he began to think about the mystic details of the rite.

Thus we have seen that the Uttarārcika, which was certainly later than the Pūrvarcika was yet older than the Brāhmaṇa and the Sūtra works.

Now remain the Ūha and Ūhagāna. It is clear from their very names that they are later than the two Gānas and the Ārcikas.

Caland¹ has shown in details that they are later than the Ārseyakalpa and Kṣudrasūtra and the Śrauta-sūtras of Lātyāyana and Drāhyāyana. Here his arguments are backed by Indian tradition, which is seen reflected in the statement of Dhanvin, the commentator of Drāhyāyana-śrauta-sūtra. He says on "viśve devā itī vasisthasya nihavamūhet" (Drāh. x. 1. 11 = LŚS. iii. 9. 12).—

'Is not the expression 'ūhet' meaningless as its reading is known (from the Ūhagāna)? It is true, but they say "the ūha (i.e. the Ūhagāna) is made after the time of the expression (of the Sūtrakāra)".²

That they were made by men is shown by the JNMV (ix. 2. 1-2) which reads :—

ūhagrantho'pauruṣeyaḥ pauruseyo'tha vāgrimah |
vedasāmasamānatvād vidhisārthatvato'ntimāḥ ||

The Ūhagāna is made by the rsis, so far as it contains the melodies "seen by them, but, on the other hand, it is made by men, so far as it has been adapted by men." The SVbr harmonises with this view, where sāmans are not cited from these two gānas, but only from the first two gānas

1 JS, Eini pp. 56

2. The text runs "nanu ca uheditī vacanamanaṁśhikam, tasyādhyāyana siddhivat | satyametat | vacanottarakalamuhali kṛtali ||' Cp Caland, PVB Int p xiii, where odhijanao is a misprint

Caland thinks that the two gānas are later than even the PpS. This treatise prescribes rules, for adapting the sāmans, as they are handed down in the Grāmegeyagāna and Araṇyegeyagāna for practical use. It is just possible, according to him, that in early times, amongst the Sāmavedins certain rules were formed and handed down by oral tradition for adapting sāmans of the earlier gānas, that these rules were at last collected in a treatise called Puṣapasūtra, and that at last, for the sake of ready reference, they were all brought into action in the form of these two gānas.

But this argument alone is not convincing. We know that the Prātiśākhya, which teach how to turn the *padas* into Saṃhitā, are centuries later than the Saṃhitās, and the same may be said with regard to the Puṣpasūtra. In reality this treatise belongs to the third strata of the Sāmavedic literature i.e. the analytic literature, which consisted of Rktantra, Sāmatantra, Akṣaratantra and numerous other works. We read in the Puṣpasūtra :—

sandhivatpadavadgānamatvamārbhāvameva ca ।
praśleṣāścātha viśleṣānūhe tveva nibodhata ॥

Here the Puṣpasūtra seems distinctly referring to the Ūhagāna, and this view is supported by Burnell and Simon.¹ The same thing is made quite patent by the colophon in the commentary of Upādhyāya Ajātaśatru, the commentator on the Puṣpasūtra. It runs :—

āmahiyaivasāmādiśrāyantīyakṛtāvadhim ।
ūhasāgaramuddhartuṃ śaknumaḥ phullanaukayā ॥

This shows that there existed an ocean of the ūhagānas to cross which the bark of the Puṣpasūtra was built.

1. "Dass dem Verfasser des Puṣpasūtra die Gānas bereits ausgearbeitet vorlagen, beweisen zu den Gründen, die S. 496-500-1 zu entnehmen sind, auch noch besonders die zahlreichen Gāna-formen, die der text des Puṣpasūtra enthält". R. Simon, PpS. p. 501, note. Caland holds that the PpS. is older than the gānas. Cp. JS. pp. 9-10; PVB. Int. p. xiii.

Thus we have seen, in brief, the three stages in the development of the Sāmaveda; and for each of these there was created a separate analytic treatise. Thus we have:—

1 Stobhas

These were treated in details in Akṣaratantra and Śrīṅjñākarana which show the formation of *stobhas*.

2 Reduction of the gānas to the RV verses or, in a reverse order, of the verses to the gānas¹

This was treated in Sāma tantra, which prescribes rules for turning the verses into sāman, that is, it shows the application of the chant to the verse.

1 On the formation of a sāman from the Śākhayāmin (Jaimini ix 2 7 2^a) says —

“sāmavedo sāhāram gityupāyāḥ | āha kṛtamo gityupāyā nāma | ucyate | gitirnāma kriyā sābhyantaraprayatnajanā svaraviśeṣāpāmabhiyānīkā sāmāśabdābhilāpyā | sā nityataprastāpāpārci gīyate | tatsampādanārtho yamgākṣaravikāro vicloṣo vikarṣapāmabhiyāso virāmāni stobha ityevamādayaḥ sarve sāmavede samāmnāyante ||

- (1) akṣaravikāra—change of syllable is dealt with in PpS viii 87 sqq
- (2) akṣaraviśeṣa—dissolution of vowel contraction, is dealt with in PpS vi 153 sqq
- akṣaravikarṣana—the sonant use of semivowels vikarṣa sam karṣana are dealt with in PpS vii 1 sqq
- (4) akṣarābhiyāsa—repetition
- (5) virāma—introducing the rests
- (6) stobha—the insertion of different sounds and syllables sometimes whole sentences or verses. For the definition of stobha cp JNMV ix 2 11 18 To these we may add —
- (7) lopa—dropping of sounds, treated in PpS vii-86 sqq
- (8) āgama—generally a meaningless syllable is inserted in any part of the radical word, but here the insertion of a *stobha* in the middle of a word is specially understood. It is dealt with in PpS vii-184 Cp also Ajataśatru who says —

‘atha bhāṣān pravakṣyāmi pragānam yair vidhiyate | arcikam strubbhikam caiva padam vikriyate tu yathā ||

3. The adaptation of sāman (occurring in the Grāmegeyagāna and Araṇyegeyagāna) to verses, other than those to which they belong in the gānas.

This was treated in details in the Puṣpasūtra which concerns itself with the modification of words and prescribes rules for adapting the sāmans, as they are handed down in the Grāmegeyagāna and Araṇyegeyagāna, for practical use at the sacrifices.

4. The turning of *padus* of the verses (occurring in the Ārcikas) into the Saṃhitā.

This was treated in Ṛk-tantra, which prescribes rules for turning the SV. *padas* into the Saṃhitā, and which therefore is a sort of a Prātiśākhya.

āyitvaṃ prakṛtiṃ caiva vṛddhaṃ cāvṛddhamēva ca |
 gatāgataṃ ca stobhānām uccanīcam tathaiva ca ||
 sandhivat padavadgānamatvamārbhāvaṃeva ca |
 praślēṣāścātha viślēṣānūhe tveva nibodhata ||
 saṃkṛṣṭaṃ ca vikṛṣṭaṃ ca vyañjanaṃ luptamatihṛtaṃ |
 ābhāvāśca vikārāśca bhāvānūhe, bhilakṣayet ||
 etairbhāvaistu gāyanti sarvāḥ śākhāḥ pṛthak pṛthak |
 pañcasveva tu gāyanti bhūyiṣṭhāni svareṣu tu ||
 sāmāni ṣaṭsu cānyāni saptasu dve tu kauthumāḥ ||

etc., R. Simon, PpS. 711.

But the CHU. (1) reads:—

“sa ha śilakaḥ śālāvatyascaikitāyanam dāldhyamuvāca | hanta tvā
 prechānīti hovāca | kā sāmno gātiriti | svara iti hovāca ||” See also BrU. (1. 3.
 25) which reads:—

“tasya haitasya sāmno yaḥ svam veda bhavati hāsyā svam | tasya svara
 eva svam | ”

Sāyaṇa in his Commentary on the SV. (Preface) writes:—“sāmaśabdavā-
 cyasya gānasya svarūpam ṛgakṣareṣu kruṣṭādibhiḥ saptabhiḥ svarairakṣara-
 vikārādibhiḥca niṣpādyate | ”

svaras are musical notations. These are kruṣṭa, prathama, dvitiya, tṛtiya, caturtha, pañcama, and ṣaṣṭha or antya (cp. Bur. Arbr. XLIII) which partly correspond to the ṣaḍja, ṛṣabha, gāndhāra, madhyama, pañcama, dhaivata and niṣāda of usual music. Besides these simple notes (prakṛti) there are seven others (vikṛti) viz, preṅkha, namana, karṣaṇa, vinata, atyutkrama, and sam-prasāraṇa. For details see my note on R. 41.

And the above shown discussion should make it absolutely clear why our treatise was invariably called "*chando-gāṇām vyākaraṇam*" and not a *Prātiśākhya* of the same. The real SV. consists of the melodies, and with them our treatise has nothing to do. These were the subject of the first three works, which accordingly deserve that appellation¹. Our treatise, on the other hand, is related to the text of the melodies and was therefore, perhaps for the sake of distinction, called simply a *vyākaraṇa*, instead of a *Prātiśākhya*. But because the text book of the melodies is also called SV., we can safely give the appellation "*Prātiśākhya*" to the *Ṛktaṇtra*.

V

Who was the author of Ṛktaṇtra ?

Tradition assigns *Ṛktaṇtra* to a *Śākāṭyāyana*; and this is supported by the colophons of the Mss. and the explicit statements of *Sāmasarvānukramaṇi*² and *Nāgeśa*.³ But *Bhaṭṭoji* goes against it and emphatically declares:—

"*tathā ca ṛktaṇtravyākaraṇākhyasya chāndogyalakṣa-nasya prapeta audavrajirapyasūtrayat*"⁴

He is supported by the author of the gloss on *Pāṇiniya-sikṣā*⁵, who quotes from *Ṛktaṇtra* in these words "*tathā*

1. "Das *Paṣpasūtra* ist als eine Art von *Prātiśākhya* zum *Uttaragāna* anzusehen" R. Simon, PpS 492 The Ms. U also calls it "*Sāmaprātiśākhya*" PpS, p. 499.

2. *rcām tantravyākaraṇe paścasaṃkhyā prapāṭhakam | śākāṭyānadovena dvātrimśat khaṇḍakāḥ smṛtāḥ ||* And so on

3 Cp Footnote on RT. p 3, L. 13.

4 "*tathā nāradyaśikṣāyāmapi | anantyaśca bhavet pūrvo hyantaśca parato yadi | tatra madhye yamastiṣṭhot savarṇaḥ pūrvavarṇayoḥ || tathā ṛktaṇtra ..asūtrayat |*

"*anantyaṇtyasamyoge madhye yamaḥ pūrvasya gupah*", ||

Śabdakaustubha 1, 1, 4, 143 Cp RT. p 2 L 14

5 (1) Cp. *Pāṇiniyaśikṣā*, Benares 1887 p. 4 "*kum khum gum ghum iti | anantyaṇtyasamyoge madhye yamaḥ pūrvaguna ityaudavrajirapi ||* RT p. 2 L. 14 "*nāradaudavrajyormatena yamo varṇāgama iti vidhiyate ||*

caudavrajih.” The author of Śikṣāprakāśa also quotes one passage from the treatise in the name of Audavraji. How to solve this conflict ?

Before entering into details, we may note the following points :—

- (1) Audavraji¹ is quoted on the rule 59 of the RT.
 - (2) Śākaṭāyana is quoted in the first line of the first Prapāṭhaka.
 - (3) The first Prapāṭhaka looks out of place. It is not counted as an integral part of the treatise by the Ms. B.
 - (4) The text contains numerous rules, that seem out of place in a Prātiśākhya. They rather belong to the subject of general grammar.
 - (5) “tathā caudavrajih. “sprṣtam karaṇam sparśānām | dusprṣtamantasth-ānām || p. 5 = RT. p. 3, L. 1.
 - (6) “katham punaranusvāradvayaṃ | hrasvadīrghabhedaneti brūmaḥ | tathā caudavrajih | “anusvārāvam ām ityanusvārau hrasvadīrghau dīrghāddh-rasve varṇa iti.” p. 6 = RT. p. 2, L. 15.
 - (7) “nimeṣakālā mātṛā syādityaudavrajih” p. 10. It is not found in the RT.
 - (8) “audavrajirapi” sparśavargasya sparśagrahaṇe ca jñeyam | varṇasya grahaṇam | sthāneṣvityadhikāra iti”, p. 12—RT. sūtra 13. According to this the commentary also was written by Audavraji himself, which is wrong, as will be shown later on.
 - (9) “tathā caudavrajih | ayogavāhā aḥ iti visarjanīyaḥ × ka iti jihvāmūli-yaḥ | × pa ityupadhmānīyaḥ | am ityanusvāraḥ | p. 13—RT. p. 2, L. 12. Note the difference in the reading.
 - (10) “dvau nādānupradānau” ityaudavrajih” p. 17—RT. 3, L. 3. Note the difference in the reading.
 - (11) “śvāso ghoṣāṇām tṛtīyāt prathamānām aghoṣāscaturthānāyugmāḥ soṣma-nāmiti”. p. 18 = RT. 3, 3. Note the great difference between this and RT.
- It is very significant that the author of the gloss refers to Audavraji, Śaunaka and Pāṇini alone. The close relation between the three has been noted by me in details.
1. Cp. also footnote on 60.

Let us remember these points and read the colophon of the Ms B It runs —

“iti rktantravyākaranam śakaṭāyanādibhiḥ kṛtam”

Does it not clearly show (a) that Śakatayana was the chief author of the treatise (b) and that, besides him, others too had their share in it ?

It is significant that our treatise invariably ends with the sūtra “svaro'nantyaḥ” with which the Sāmāntantra begins, and that the two are generally mentioned together Besides, there runs a remarkable affinity between the technical terms of the two This will be clear from the following —

The technical terms of the RT and ST may be conveniently divided into three classes¹

- (1) Artificial words
- (2) Mutilated words
- (3) Technical words

(1) Artificial words —

Terms	RT sūtras	ST sūtras,
ad = pādāmardhiya	112, 143	I 10 1
an = pādādi	71, 77	III 7 8
khid = pādopāntiya	145	I 9 7, II 4 10, V 8 9
cu = dirghibhavati	247, 255	I 10 3
na = pādāntiya	148	V 4 1
san = samyoga	27, 49, 269	I 8 4, V 4 3

Such words are found in Sāmāntantra in a larger number Cp gi, ji, di, di, bi, as names of the first five notes, ta trimātra, nu samprasārana, iñ pādānta, uñ parvānta and numerous others Burnell has shown that the remarkable peculiarity of both Rktantra and the Sāmāntantra is that they have no paribhāṣā, and hence, it is necessary to gather the meaning of these terms from the very scanty commentaries, written upon them

¹ I owe the list of words to Burnell, RT pp LI-LII

A larger class is :—

(2) Technical terms formed by mutilating real words:—

Terms	RT. sūtras	ST. sūtras
ayuk= ayukta	252	
ara = akṣara	256	
ud = udātta	51. 156	X. 2. 1.
ṛk = ārcika	154	V. 1. 2; VII. 6. 7.
kṣa = akṣara	282	
grā = grāma	113	
gha = dīrgha	50, 93, 103, 112, 113, 148	1. 7. 3; II. 7. 6; IV. 11. 1.
ghu = laghu	236, 237	VII. 3. 8; 63
ṭhya= kaṇṭhya	147	V. 1. 3
ti = gati	29. 110	II. 5. 2
da = pada	69. 272	V. 1. 7
bha = stobha	150	III. 3. 9; IV. 10. 6
ma = virāma	54	
mat= prakṛtimat	64	
māsa= samāsa	1. 125	II. 3. 1
yuk = yukta	90	1. 8. 8; II. 9. 5; III. 3. 4
ra = para	270	1. 7. 4; 8. 10.
„ = repha	107	V. 4. 3
„ = svara	26, 68, 93, 119, 169, 257, 265, 269.	II. 8. 3; 10. 1; V. 2. 5.
raṇa= karaṇa	181	
rga = varga	13	II. 5. 3; 10. 1; V. 5. 1
lup = lopa	83. 156	
vat = udāttavat	52	
vya = tālavya	241	VI. 2. 8
san-		
dhya= sandhyakṣara	95, 8	
sthā = antasthā	169	V. 10. 3
sya = rahasya	C. 277	V. 2. 1
sva = hrasva	25. 150	
ṣmin= ūṣman	245	V. 6. 3

Tradition and Sāmasarvānukramaṇī¹ assign Sāmatantra to Audavraji; and the name Puṣpayāśas Audavraji occurs in the Vaṃśa brāhmaṇa² in the list of the illustrious ancients of the SV. literature. This Audavraji, the author of the Sāmatantra may be identical with Audavraji, the originator of the Rk-tantra.

Now there goes another, very important analytical treatise on the SV. by the name Puṣpasūtra, where the word 'puṣpa' is strongly suggestive of Puṣpayāśas (Puṣpayāśas Audavraji), and the suggestion is strengthened by the colophon of a Ms which reads "audavrajikṛtaṃ puṣpasūtram."

One thing more. Connected with the system of technical terms and symbols, just noted above, there is the way of quoting or reproducing sāmans, which is distinctive of the SV. analytical literature. In this respect we find a very close resemblance between the RT., ST., and PpS. To illustrate the point I append herewith a list of abbreviations from the PpS.:—

chidra	=	achidra.
patya	=	apatya.
sita	=	āsita.
rūpa	=	vairūpa.
leya	=	kāleya.
tani	=	saṃtani.
kranda	=	abhikranda.
varta	=	abhivarta.
goṣṭha	=	aṅgirasāṃ goṣṭha.

1. sāmāntantraṃ pravakṣyāmi sukhārtham sāmavedinām ।
audavrajikṛtaṃ sūksmaṃ sāmāginām sukhāraham ॥

Sāmasarvānukramaṇī.

But cp. "Sāmaśramin in the Preface to Akṣaratantra:—

"grantho' yamuktantrapranetuḥ śākatāyanasya samakālikena mahāmuniṇā āpīśalinā proktaḥ । sāmāntantram tu gārgyenetyeva vāyamupadiṣṭāḥ prāmāṇikāḥ".

- 2 Puṣpayāśasa audavrajeh puṣpayāśā audavrajih VBr. p. 11.

rūpa	=	añjovairūpa.
ārṣabha	=	śakvarṣabha.
siṣṭha	=	ihavadvāsiṣṭha.

Here the beginning of the word has been dropped. There are terms in which the middle portion is dropped. Such are:—

janavarta	=	jamadagnerabhivarta.
kṣuṣṭambha	=	kṣullakavaiṣṭambha.
dvihiṃkādevya	=	dvihiṃkāravāmadevya.

There are words of which the beginning and end both are dropped:—

cīneḍa	=	praticīneḍakāśita.
tamasa	=	dīrghatamaso'rka.
mahī	=	āmahīyava.

There are words of which sometimes the beginning is dropped and sometimes end:—

ānūpa or vādhryaśva	=	ānūpavādhryaśva. ¹
āndhī, ndhīgava or gava.	=	āndhīgava.

1. (a) For details cp. R. Simon, PpS. 503-506; Burnell, Arbr. p. XXX-IV ; RT. pp. LI, LIII. That PpS. also belongs to the pre-Pāṇiniyan school of Sanskrit grammar has been shown by Burnell in "On the Aindra School of Sanskrit Grammarians pp. 27-48; Arbr. p. XXIII. R. Simon holds the same view. Cp. PpS. p. 503. See also Belvelkar, Syst. Skt. Gr. p. 11.

(b) Just as in RT. *ra* represents para, svara, and repha, so in the PpS. gava = āndhīgava, but also gaṇḡgava ; tamasa = dīrghatamaso'rka, but also dairghatamasa and so on. It is noteworthy that in the three treatises the use of such clipped words is not very consistent, the full word is often used; and we also have more than one abbreviation of the same word. The RT. and the commentary also present a number of technical terms, which are, more or less, common to it, the Sāmatantra, the Prātiśākhya and some grammars. Such are:—

akṣara, aṅga, abhyasta, abhinidhāna, upasarga, ekavacana, nāmin, niṣṭhā, pada, pratyaya, mātṛā, lopa, varṇa, vibhakti, sandhyakṣara, samāsa, sparśa, svara and vyañjana. According to Burnell these words belong to the Aindra School of grammar and these coupled with the evidence, shown later on, point to an early origin of our treatise.

āṣu or bhārgava = āsubhārgava
 idānām or sāmksara = idānām sāmksara
 gaurī, rīvita or vīta = gaurīvita
 satrā or sāhija = satrāsāhija

Thus the close similarity of technical terms, occurring in the three treatises, and the identity of the names of their authors, coupled with the statement of VBr lead us to assume that the three analytical works were composed, in their original form, by Puspayaśra Audāraja.

Starting on this clue, we may formulate our hypothesis, regarding the authorship of the RT as follows -

1 The original Rktaṇtra was composed by Audāraja, who also wrote Sāmatantra, Puspasūtra and a grammar on bhasā, which had a distinct set of Pratyāhāras¹, as is shown by the first Prapāṭhaka of the RT

1. Cp "samniveṣṇyaḥ, pratyāhārārthaḥ" RT p 3 l 4 On Mahābhāṣya (1.1.2.110) Nāgārjuna makes an important statement "pare tu parihāṣārābhāṣeṣi 'o ityeva sūtram lāryam prātiśākhyaādiprasiddhahalaḍipratyāhārasiddhayaṥartham". There are no Pratyāhāras in any of the Prātiśākhya, excepting ours that refers to the Pratyāhāra of "ra" and "ha" Cp 'pratyāhāre rahayor vargasāhijā' p 3 L 10 But in the main body of the text we do not find any pratyāhāra even in the RT This indicates that the original text was different from the present one and the same was based, more or less, on the system of Pratyāhāras This Prapāṭhaka also refers to the Brahmarāsi, which is supposed to be prehistoric Cp Nāgārjuna (MBh 1.11.2.132) - aṣṭākṣarasya māmānāyasya āgryasahārajanakasya na kaścit kartāstyoḥ amovā veda pāramparayena smaryamānam | Hari quoted by Nāgārjuna According to the tradition these were revealed by God Śiva himself by sounding his tabor The device of anubandhas or signification endings, so advantageously used by Pāṇini is also found here, which shows that the device already existed and Pāṇini only utilised it to its utmost limits Cp Pat on VII.1.18 athavā purvasūtranirdeśo yaṁ | purvasūtre ye' nubandhā na tairiḥetīrāyāpi kriyante' Cp Belvelkar, Systems of Sanskrit Grammar p 23 Ajāṭītru the commentator on PpS (Benares 1922 p 170) attributes a statement to Audāraja which is not found in the RT, 'evam hi smaratyaudārajaḥ | nāmyantādūpasargacōṣeṣe karah | the quotation may be from Audāraja's grammar on bhāṣā which is not available at present

2. Śakaṭāyana, who may have been a follower of Audavraji, revised Audavraji's work, both in RT., where he quotes him by the name (53), as well as in grammar, where the former's work was superseded by that of the latter. The main sphere of Śakaṭāyana's activity lay in grammar, hence it is futile to hunt all his doctrines in the RT.

3. Yāska refers to Śakaṭāyana, and traces of Śakaṭāyana's analytic grammar are detected in Yāska's Nirukta. To this we shall come later on.

4. Pāṇini drew from Śaktāyana; and it unfortunately happened that his work acquired by its great merits such a celebrity as to supersede almost all that had been written on grammar before him, so that except the names and some particular rules of former grammarians, we have little left of this branch of literature; except what occurs occasionally in the Prātiśākhya. That Pāṇini knew Prātiśākhya had been indicated long ago by Böhtlingk and Müller; and it has been proved now by a comparison of Pāṇini's sūtras with those of the Prātiśākhya, that Pāṇini largely availed himself of the works of his predecessors, frequently adopting their very expressions, though he quotes their names only in cases, where these have to serve as authorities for certain rules. In all the sūtras, that are found parallel in RT. and Pāṇini, the latter may owe a debt to the former.

5. Simultaneously with Pāṇini² or a bit later than him, there occurred the third and the final redaction of our treatise

1. For details cp. Müller, *Anc. Skt. Lit.* p. 150-51.

2. For the date of Pāṇini cp. Colebrook, *Asiatic Researches* VII (1801, *Essays* ed. Cowell II p. 4); Böhtlingk II p. XIII; Roth, *zur Literatur und Gesch. des Veda* p. 16; Reinaud, *Memoires de l' institute de France* XVIII. p. 88; Weber, *Indischen Literatur Geschichte* p. 199; with Weber agreed Julien and Müller; Westgaard, *Über den ältesten Zeitraum der Indischen Geschichte* p. 72; Goldstucker, *Pāṇini* pp. 225-227; Benfey *Geschichte der Sprachwissenschaft* p. 48; Bhandarkar, *Ind. Ant.* I p. 16; Burnell, *Aindra School* p. 44; Pischel, *ZDMG.* XXXIX p. 95; Peterson, *Detailed Report* (1883 and his

and the authors of this stage expressly quote Śakaṭāyana¹. It was probably at this juncture, that a good many rules, rules that have little to do with the SV. or any other Veda, were showed into the text². These are not referred to by Śaurisūnu in his Laghurkantantrasaṅgraha.

6. The authors of the third stage drew their new material, possibly from Pāṇini, who had borrowed this from Śakaṭāyana and other predecessors³, or more probably from Śakaṭāyana himself, whose work may have been partly known to them. This becomes clear from a minute comparison of RT. 189—211 with Pāṇini VI. 1. 135—157, the latter being much more systematic and comprehensive. To cite only some. RT. 209 provides for "rathasyā" alone, while the corresponding rule in Pāṇini (VI. 1. 15. 7) covers as many as five examples, the word "rathasyā" being included in them. Pāṇini VIII. 3. 48 is a clear improvement on RT. 128. RT. 156-157 have been reduced to one sūtra (VI. 1. 138) by Pāṇini. The results of such a testing will be found scattered through the notes, and these need not be summed up here.

There also occur a few rules in the RT., which are clearly meant for bhāṣā, and for which Pāṇini has no corresponding rules, while Kātyāyana has. Cp. 96, 97, 98, 99, 103, 106 with their notes. Some of them seem to be an improvement upon Kātyāyana, but can be explained otherwise as well. Take, for instance 96, which reads "bhāṣāyām nīparayoh."

paper on *Aucityālaṅkāra* of Kṣemendra (1885); cp. also Bombay Sanskrit Series 31 p. 51; Sylvain Levi, *Journal Asiatique* 1890 pp. 234-240; Liebh, Pāṇini p. 108; Winternitz, *Gesch. der Ind. Litt.* III p. 383; Bolvarkar, *Syst. of Skt. Gr.* pp. 13-18; Intermediate Prose Selections 1924 on Nir. 29; Schroeder, ZDMG. 33. p. 177 ff; 49 p. 145 ff. (169); Hillebrandt, *Die Anschauungen über das Alter des Ṛgveda* ZDMG. 1927 pp. 67-68.

1. In the beginning of the text "śvāso nāda iti śakaṭāyanah"

2. Cp. RT. 189-211 and others with my notes. Cp. 107-109.

3. Generations of grammarians must have preceded Pāṇini. Cp. Kielhorn, *Der Grammatiker Pāṇini*, NGGW, 1885 p. 189; Liebh, Pāṇini p. 16.

This would apparently imply that there are many instances, where the *a* is followed by 'ṇī' and that the rule prescribes *vrddhi* for them. Kātyāyana, on the other hand, limits the scope of the sūtra to three words i.e. "svairī", "svairiṇī", and "akṣauhiṇī", because these may have been the only words to which the *vrddhi* phenomenon was applied. A similar explanation can be offered for 106, which reads "vatsatarādīnāmṛṇi." This also would, *prima facie*, imply that there are many instances to be covered by the rule. There may have been many, but since in Kātyāyana's time these were only six, he incorporated them into a vārtika, and thus made the scope of the sūtra precise. And the comparison of the sūtra with the vārtika strongly suggests that the author of the former was not at all acquainted with the vārtika. Had he known it, he would have, for brevity's sake, begun the sūtra with *pra*, which comes first in the vārtika, and not with *vatsatara*, which stands second in the vārtika, and is also a larger word.

In fact, this kind of comparison seems no safe foundation for any chronological edifice, and we must accept its results with the utmost caution. Such similarities are bound to occur in any class of works, and they need not be more than an ancillary to the chief argument, otherwise corroborated. Were we to rely solely on them, we shall be forced to admit that Yāska was later than Pāṇini and even Kātyāyana¹. The sūtras of Pāṇini nowhere make any provision for the formation of words like "apārṇa", which occurs in Nirukta (III. 2), nor did Pāṇini know Yāska's explanation of "sūryā" (RV. X. 85. 20) by "sūryasya patnī." Pāṇini, must therefore, have preceded Yāska, else how to account for such an omission in Pāṇini? Kātyāyana removes the last defect by prescribing the vārtika "sūryāddevatāyām cāb vācyah" (IV. 1. 48). We shall have to

1. Yāska was prior to Pāṇini. Cp. Liebig, Pāṇini p. 19; Zur Einführung in die Indische einheimische Sprachwissenschaft II p. 28 ff. For details see Roth, Nir., 1. 17 p. 38; Hillebrandt, Die Anschauungen über das Alter des R̥gveda. ZDMG. Vol. 81 pp. 68-69.

presume that the author of the vārtikas came after Yāska and utilized his material. But the first omission is not rectified even by Kātyāyana, who explained "prārṇa" and "ṇārṇa" etc., but not "apārṇa" of Yāska. This would lead us to assume that Yāska came after Kātyāyana¹. But this is all fallacious, and none would entertain this even for a moment.

The utmost, that we can conclude from such similarities, is this, that these rules may have been taken from Pāṇini, and Kātyāyana into the Ṛktantra, but the former too borrowed them from Śakaṭāyana and others. Thus the process is reduced to this:—

and although Ṛktantra may owe some rules to Pāṇini and even to Kātyāyana, yet both of them stand indebted to Śakaṭāyana, and Śakaṭāyana was the author of Ṛktantra.

The hypothesis does not cause surprise, when we note, that exactly the same thing happened with regard to the authorship of the Puṣpasūtra.

Nothing was definitely known about the authorship of the PpS. The Ms. C., used by R. Simon ascribes it in the end of its fifth and sixth chapters, to a Gobhila², while the S. Indian Mss. distinctly attribute it to Vararuci³. One Ms.⁴ however, connects the treatise with Audavraji and this is significant. Weber⁵ threw out a suggestion that the extant PpS. is not the work of one man, but is a sort of collection done by

1. Cp. Belvalkar, Systems of Sanskrit Grammar p. 7.

2. Müller, Anc. Sanskrit Literature p. 210; R. Simon, PpS. p. 49,

3. Burnell, Arbr. XXIII; R. Simon, PpS. p. 495.

4. Cp. A Catalogue of the Sanskrit Manuscripts in the Adyar Library. Vol I, p. 51, 25 c. 11 Grantha character.

5. Akad. Vorlesungen über Ind. literaturgeschichte 1876, p. 91.

several hands. R. Simon, has beautifully shown the successive stages, through which the work has passed¹.

Now the name Puṣpayaśas² seems strongly suggestive that the work originated with Puṣpayaśas, a renowned ācārya of the Sāmavedins, and was successively revised by Vararuci, Gobhila and others.

The same thing is told about Sāmatantra, of which thirteen Prapāṭhakas are commonly known. But one Ms. has two additional chapters called Sañjñāprakaraṇa, and Burnell reports that two more, called Parvaprakaraṇa are known in the Gujrat⁴.

And it is very doubtful whether any one of the Prātiśākyas has escaped extensive modifications, by alteration, insertion, and addition, since its first substantial construction. The fact that in the RPr., all that is essential to make out such a treatise, is contained in the first half, or chapters I-IX, is strongly suggestive of the accretion of the later chapters; and the character of more than one of them lends substantial support to this suggestion⁵. That the VPr. has suffered interpolation and addition is the opinion of Whitney, and the same may be held with regard to the TPr. and CA. It has been suggested that some of the many citations of authorities found in the TPr.⁶ have been interpolated in the Prātiśākhyā,

1. R. Simon, PpS. 499.

2. unādisphuṭikarāṇāya vararucinā pṛthageva sūtrāṇi prapīṭāni | tadyathā "krvāpāji". Vimalasarasvatī, the author of Rūpamālā, quoted by Belvalkar, Systems of Sanskrit Grammar p. 27.

3. The practice of using half names is common.

4. Burnell, Arbr. XXIV.

5. Whitney, CA. p. 580.

6. For the list cp. Whitney, TPr. p. 430. According to Whitney all the metrical rules (TPr. XVII. 8, XXII, 14, 15, XXIII. 2, 14, 15, 20, XXIV. 5, 67) are to be taken as unauthentic.

They are found in other parts of the Prātiśākhyā literature. In the same category may also be included the seventeenth and eighteenth chapter and all that follows the twentyfirst on the score of the content alone. For details see Whitney, TPr. pp. 432-433.

after the latter ceased to be a mere body of practical rules for the guidance of a school, and in virtue of its thoroughness and comprehensiveness, gained more the character of a phonetic treatise on the Black Yajurveda, and was used in other schools than that which originated it.

And a similar story is told about Yaska's Nirukta. Dr. Lakshman Sarup, who has based his edition of Nirukta directly or indirectly, on the evidence of sixty-five manuscripts¹, has beautifully shown the three² stages of interpolations in the Nirukta, where the successive interpolations from one family to another, are invariably the amplifications of the text of a shorter recension, and are thrust between sentences, wherever the text could be so enlarged with impunity, as, for instance, in multiplying the number of etymologies and attributing them all to Yaska³."

The same thing was suggested by Goldstucker⁴ with regard to the Uṇādis of Pāṇini. The list of Uṇādis was first drawn up by Pāṇini on the basis of Śākaṭāyana,⁵ and was afterwards modified and corrected by Kātyāyana. The extent of the

1. Sarup, Nirukta, Introduction p. 23

2. Sarup, Nirukta, Introduction pp. 19-20 The three stages are :—

(a) D, i. e. the commentary of Durga, written before the addition of *Parīṣiṣṭas* and embodying the whole text of the Nirukta, represents the earliest period, i. e., about the thirteenth century A. D.

(b) B i. e. the Mss. of the shorter recension, represents a period later than D, when the *Parīṣiṣṭas*, were added, but not divided as yet into different chapters and when the old orthography was still prevalent

(c) A i. e. the larger recension, represents a still later period, when the *Parīṣiṣṭas* had been divided into chapters and old orthography had gone out of use.

3. Sarup, Nirukta p. 22 An analogous example is furnished by Latin literature; the text of Servius, the commentator of Virgil, shows a similar threefold amplification

4. Pāṇini, his place and c. pp. 170, 181 (reprint 130, 139).

5. Cp. "nāmānyākhyātājānīti śākatāyano nairuktasamayasca." Nir. I. 13 Cp. Nāgeśa, ŚŚ. on P. II. 3. 1. Goldstucker does not notice this

46 Do we find any trace of Śākaṭāyana's views in the RT. ?

changes introduced by Kātyāyana into the text, was so great, that ultimately popular tradition came to credit him with its sole authorship¹. And this is exactly what we have noticed with regard to RT. Here also the tradition has practically forgotten all about the real author of the text, and has consequently credited Śākaṭāyana with its sole authorship.

VI

But assuming that Śākaṭāyana was the chief author of the RT. the question arises "*do we find any trace of his opinions in it ?*"

Before we attempt an answer to this, let us see, what works Śākaṭāyana wrote besides the RT.

1. Śākaṭāyana wrote a treatise on the *pada* text, presumably of the SV. This is shown by the remark of the commentator on CA. (preface to the IV chapter) which runs : "samāsāvagrahavigrahān yathovāca chandasi śākaṭāyanah | tathā vakṣyāmi catuṣṭayam padam nāmākhyātopasarganipātānām ||

2. Śākaṭāyana wrote an analytic grammar. This is shown by the following :—

(a) Yāska³ says :—

"nāmānyākhyātājānīti śākaṭāyanah |"

(b) Kātyāyana⁴ puts the same thing as :—

"nāma ca dhātujaṁ māha nirukte vyākaraṇe śākaṭasya ca tokam |"

1. "unādisphuṭikaraṇāya vararucinā prthageva sūtrāṇi prapītāni | tadyathā kṛvāpāji" Vimalasarasvatī, the author of Rūpamālā, quoted by Belvalkar, Systems of Sanskrit Grammar p. 27.

2. "As Śākaṭāyana has set forth for Veda, the combination, division, and disjunction of words in *pada*, so will I set forth the quadruple word, noun, verb, preposition and particle" Whitney in the preface to the IV. Ch.

3. Nir 1. 12.

4. On Pāṇini III. 3. 1, while discussing that every word is derived from a verbal root.

(c) Patañjali¹ says:—

“Śākatāyana was an analytic grammarian, as opposed to the etymologist.”

3 Śākatāyana wrote a treatise on phonetics The following are the references to it:—

(a) CA. II. 22 states that according to Śākatāyana final *y* and *v*, are uttered with a slighter effort² The same thing is ascribed to him by Pāṇini³.

Now Rktaṇtra, while treating the loss of *y* and *v*, records the view of Naigī in 159, of other teachers in 160, and at the end states, that the half of *y* and *v* is omitted, which is another way of saying the same thing. This view is not attributed to any particular teacher. Does it not show that the treatise represents, in the main, the doctrines of Śākatāyana, and belongs to a school, which derives its name from him?

(b) RPr (VIII. 16) states that according to Śākatāyana, in the diphthongs, *e* and *ai*, *a* forms the first half, and *i* the second; in *o* and *au*, *u* forms the second half⁴. The view is implied in 15. Cp note on it

(c) VPr III 9 states that according to Śākatāyana, *visarjanīya* becomes a sibilant before a sibilant⁵ The phenomenon is prescribed by 177

(d) VPr. III. 12 states that according to Śākatāyana, *visarjanīya* becomes *jihvāmūliya* before gutturals and *upadhmāniya* before labials⁶. This is, in a way, covered by 177.

(e) Pāṇini VIII 4. 50 attributes to Śākatāyana the view, that duplication does not take place in a group of more

1 On Pāṇini III 3 115. Cp Nageśa, ŚŚ on Pāṇini III 3 1

2 “leśavṛttiradhisparśam śākatāyanah CA II 24

3 “vyorlaghuprayatnataraḥ śākatāyanaśya Pāṇini VIII 3 18

4 “sandhyeṣṭakāro’rdhamikāra uttaram yujorukāra iti śākatāyanah’ RPr XIII, 39

5 “pratrayasavarṇam mudī śākatāyanah’ VPr III 9

6 “jihvamūliyopadhmāniya śākatāyanah VPr III 12

than two consonants¹. The phenomenon is indirectly prescribed by 169. Cp. note on it.

(f) VPr. III. 86 states that according to Śākaṭāyana² the *n* of "pari naḥ" becomes "ṇ". In SV. "pari" is followed by "naḥ" only twice (SV.II.560; II.247). The former is covered by 274, but the latter is not; and this seems exactly the reason why Śaurisūnu specially cites "pari naḥ śarmayantyā" as an example of cerebralisation in his *Laghu-ṛktantra saṅgraha*³. It is just possible, that a rule to that effect existed in the RT., which somehow or other fell out of it.

(g) VPr. IV. 5 states that according to Kāśyapa and Śākaṭāyana, *m* and *n* are dropped, when they are followed by *r* and a sibilant⁴. In the note on 112, I have shown in details that *n*, when preceded by a long vowel, is reduced to *visarjanīya*, and the same, when preceded by *ā*, becomes *y* by 117, only to be dropped by 158; but when preceded by other long vowels, it is reduced to *r* by 115, and an *anusvara* is inserted by 185 between the vowel and *r*. The VPr. seems to refer to this phenomenon.

(h) RPr. 1. 16 states that according to Śākaṭāyana, the first of a class can only be a final⁵. Rule 172 moves against it and the reason is shown later on.

(i) The commentator on CA. (IV. 30) cites a verse⁶ which according to Whitney means "Śākaṭāyana mentions five cases in which *yā* suffers separation by *avagraha*; it is

1. "triprabhṛtiṣu śākaṭāyanasya" Pāṇini VIII. 4. 50.

2. "pari na iti śākaṭāyanah" VPr. III. 86.

3. Benfey has in both the places "pari naḥ". But RV. and JS. read 'pari naḥ'. Cp. Caland JS. Einl. p. 34.

4. "lopam kāśyapa śākaṭāyanau" VPr. IV. 5.

5. "prathamam śākaṭāyanah" RPr. I. 16

6. pañcaivāvagrahānāha yā śabde śākaṭāyanah |
antodāttaḥ padatvaṃ ca vibhaktyarthe bhavettu yā ||

accented as final, and stands as an independent element, when used as a case ending. The examples cited by the commentator are not found in the SV., and there being close affinity between Śakaṭāyana and Śaunaka¹, Śakaṭāyana may have laid down such a rule in his treatise on *pada* text, more or less, applicable to both the SVPp. and AVPp.

Thus barring one or two cases, all the views, attributed to Śakaṭāyana, that concern *phonetics* are easily traced in the RT. And it was rather presumptuous on Burnell's part that he, without instituting a searching enquiry into the matter, hastily pronounced:—

"But of all his (Śakaṭāyana's) distinct and peculiar opinions, there is no clear trace in the text. The text is attributed to Śakaṭāyana, but so far as we know the teachings of that old grammarian, there is no adequate reason for supposing this ascription to be correct."

VII

How is it that Pāṇini stands indebted to Śakaṭāyana ?

While discussing the authorship of the RT. I stated that, with regard to the statements which are similar in RT. and Pāṇini, the latter may owe a debt to the former. It has been shown in the notes, that the rules 189-211 of the RT., are found virtually in the same form in Pāṇini VI. I 135-157. These rules have no bearing on the SV., and this suggests, that the same were added to the text later on. Here one would argue that the followers of Śakaṭāyana borrowed these sūtras from Pāṇini and not vice versa. This may be true, but the question in that case would amount to this:—

"Are these sūtras of Pāṇini, his own, or has he borrowed them from an earlier grammarian ?"

1. Burnell, RT. p. X.

50 Pāṇini has closely followed the implications of the SVPp.

In the note on 210, I have shown in details, that it was beyond the ken of Pāṇini to show the formation of those words, which he regarded as *underivative*, and that, wherever, he, in order to make his work encyclopædiac, has introduced their formation into it, he has obviously followed Śākaṭāyana; and this view is emphatically endorsed by Kātyāyana, Patañjali, Kaiyaṭa and Nāgeśa.¹ And if we once assume that Pāṇini borrowed 210 from Śākaṭāyana, there is nothing to prevent us from assuming that, in all the statements, that concern *underderivatives*, and are found similar in Śākaṭāyana and Pāṇini, the latter owes a debt to the former.

And this is not at all surprising. We have just noted that Śākaṭāyana wrote a work on the *pada* text, presumably of the SV; gave *etymologies*, that sounded peculiar to others, and also wrote a work on *phonetics*. The first two works are not available, and the extant *pada* text of the SV. is generally ascribed to Gārgya². In spite of that, the same forms the basis of the RT. and exhibits unmistakable traces of Śākaṭāyana's system. Now if we could only show that Pāṇini in his Uṇādisūtras has closely followed the implications of the SVPp., we shall have automatically demonstrated the later's indebtedness to the former.

It is a rule in SVPp. that it *does not divide the root and the suffix*, and *does invariably separate the prefix from the body of the word*. Pāṇini has closely followed in his Uṇādi³

1. On Pāṇini III, 3, 1 For details cp. Nāgeśa, ŚŚ, on this sūtra.

2. Cp. Durga on Yāska (IV, 4):—

“bahvr̥cām mehanetyekam padam | chandogānām trīṇyetāni padāni “ma iha na” iti tadubhayaṃ paśyatā bhāṣyakāreṇobhayoḥ śākalyagārgyayor-rabiprāyāvatrānuvihitau” | Durga lived about the beginning of the 14th century (L. Sarup, Nir, 29) and as he quotes here the old commentator i.e. Skandasvāmin as his authority, his statement is entitled to consideration Cp. also Sāmaśramin, Preface to the Akṣaratantra.

3. I have already pointed out that Śākaṭāyana was the chief founder of the Uṇādiṣūtra. Uṇādis may have existed even before him, but it was,

Pāṇini has closely followed the implications of the SVPp. 51

the implications of this practice. This will be clear from the following :—

SVPp.	Pāṇini.
panthāḥ	patastha ca ¹ (656).
anīkaḥ	anīhṣibhyāṃ kicca (626).
iṣirāḥ	īśimadi° (595).
sthavirāḥ (but sthā + virīḥ)	ajīraṣi° (595).
vidathāni ²	rudividibhyāṃ nit (622).
pataṅgaḥ ³	pateraṅgac (600).
uktham	pātīnūdivaci° (604).

no doubt, he, who at first put them into a systematic form, as is shown by the clear statements of Yaska, Kātyāyana and Patañjali. Pāṇini, who came some centuries later, overhauled this list and made definite improvement upon Sakatāyana. The extant Unādīs exhibit unmistakable marks of Pāṇini upon them. They use sañjñās such as hrasva, dirgh, pluta, udātta, upadhā, lopa, samprasāraṇa and abhyāsa in the same sense in which Pāṇini uses them. The elliptical words i.e. *anubandhas* of the Unādīs are also similar to Pāṇini's.

Kātyāyana, who came later than Pāṇini, improved his work, and the extent of the changes introduced by Kātyāyana into the text was so great, that ultimately he came to be regarded as the sole author of the Unādīs. Cp. Belvalkar, Syst. of Skt. Gr. p. 27.

All the lists of Unādīs have not yet been published. We have only Pañchapadī in the Siddhānta Kaumudī. A Daśapadī has been edited by my friend Pt. Brahmadaṭṭa and is now in the press at Benares. The publication of the complete list of Unādīsutras will open a new and fascinating field for researches on Indian Grammar.

1. The reference is to SK of M. M. Śivadatta

2. On *vidatha* cp. Muller, SBE 32, 350, Bloomfield, JAOS. 19, 2, 12 ff, Geldner, ZDMG. 3 53. 733-61, Wackernagel, Altind. Gr. I, 108 and Macdonell, Vedic Gr. p. 23.

3. I do not see any reason why "pataṅga" has been included in the list "samudrādi" (CA. IV 40) which negatives the division. Note that "samudra" is divided into *sam* + *udra* in the SVPp. The Padapāṭha of the AV. has been edited in full by Shaṅkara P. Pandit in his AV. The Padapāṭha contains serious errors both in regard to accentuation and the division of compound verbal forms, as well as in other respects Macdonell, Vedic Gr. p. 4. Cf. also Luders, on *hr̥dyota*, Vyākṣikṣa p. 56.

SVPp.	Pāṇini.
haryataḥ	bhṛmṛdṛṣi° (621)
vṛṣabhāḥ	ṛṣivṛṣibhyām kit (622)
ojaḥ	ubjerbale balopaśca (639)
akṣaraḥ	aśeḥ saraḥ (619)
parvataḥ	bhṛmṛdṛṣi° (621)
kumāraḥ	kameḥ kidiccopadhāyāḥ (623)
etaśaḥ	iṇastaśan taśasunau (624)

These words are not separated in the SVPp., and according to Pāṇini, they consist of only two elements i.e. the root and the suffix. Now let us see some specimens, where SVPp., Yāska, and Pāṇini all the three agree :—

SVPp.	Pāṇini.	Yāska.
atithiḥ	ṛtanyanci° (607)	“abhyatitogrḥān bha- vati abhyeti tithiṣu parakulānīti vā ” (nir. 4. 5), The first derivation accords with the SVPp.
ātmā ¹	sātibhyāmaninmaṇi- nau (637).	“atmātatervā āpter- vā api vāpta iva syāt yāvadvyāpti- bhūta iti ” (nir. 13. 15).
parśuḥ	sprśeḥ svaṇṣuṇau pr- ca (642).	“parśuḥ sprśateḥ” (4. 3).
parjanyaḥ	parjanyaḥ (prṣu seca ne) (621).	“parjanyastrpeḥ ād- yantaviparītasya tarpayitā janyaḥ paro jetā vā paro janayitā vā prār- jayita vā rasānām

1. For the discussion on tman = ātman cp. Wackernagel, *Altind. Gr. I.* 61; Macdonell, *Vedic Gr.* p. 11. Müller, *Anc. Sanskrit Lit.* p. 23. note.

SVPp.	Pāṇini.	Yāska.
		(10. 10.) The first derivation accords with the SVPp.
nakṣatram ¹ (yajatram) (vadhatram)	aminakṣiyajivadhpa- tibhyo 'tran (621.)	"nakṣatrāṇi nakṣater- gatikarmaṇaḥ (III. 20) amuṃ sa lokaṃ nakṣate tannakṣat- rāṇāṃ nakṣatrat- vam " (T.B. 1. 5. 2. 5. 6). But the deriva- tions "nemāni kṣatrā- ṇīti ca brāhmaṇam" (SRV. 1. 50. 2) and "na vā imāni kṣatrā- ṇyabhūvannīti" (TB. II. 7. 18. 3) are not favoured by SVPp., and hence are not followed by Pāṇini.
ahih	ahantitī ¹	"ahirayanāt etyanta- rikṣe ayamapīta- ro' hīretasmādeva nirhrasitopasargaḥ " (II. 17). The der- ivation from √han + ā is not favoured by the SVPp. Were it acceptable to Pp., the prefix ā would have been separated.

There are instances, where Yāska has deviated from the SVPp., and Pāṇini has followed him instead of the former.

1. Macdonell, Vedic Gr, pp 38, 74

To cite only a few instances :—

SVPp.	Pāṇini.	Yāska.
akṣi (= a ṭ kṣi)	aśernit (624)	“akṣi caṣṭeḥ ṭ anakteri tyāgrāyaṇaḥ ṭ” (1.9). Both the deriva- tions move against the SVPp.
akṣa (= a ṭ kṣa)	aśerdevane (616)	“akṣāḥ ṭ aśnuvata enā- niti vā ṭ abhyaśnuva- ta ebhiriti vā” (IX.7).
asurasya ¹ (= a ṭ surasya)	aseruran (594).	“asurāḥ ṭ asuratāḥ” (na + su + ra + tāḥ). This accords with the SVPp. But “sthā- neṣvastāḥ ṭ sthāne- bhya iti vā ṭ api vāsu- riti prāṇanāma ṭ as- taḥ śarīre bhavati ṭ tena tadvantaḥ ṭ” go against the SVPp., because in that case a will not represent negation, and hence would not be sepa- rated.
viprah (vi ṭ prah)	ṛjrendrāgra° (607) Pāṇini derives the word from √vip.	
putrah (= put ṭ trah)	puvo hrasvasca (637)	“putrah ṭ puru trāyate ṭ punnarakam ṭ tatas- trāyata iti vā ṭ” This accords with the SVPp. But “nipa-

1. The word cannot reasonably be connected with assur, either as source or result. Cp. Thomas JRAS, 1916 p. 364.

SVPp.	Pāṇini.	Yāska.
		raṇādvā i" militates against it, and the same has been followed by Pāṇini.

Instances are not wholly wanting, where Pāṇini wavers between SVPp. and Yāska. To cite only one :—

SVPp.	Pāṇini.	Yāska.
mitram (= mi + tram)	amicimidiśibhyaḥ kt- raḥ (637).	"medayatervā" (X.21). But "mitraḥ + pramī- tes trāyateḥ + sam- minvāno' dravatīti vā" accords with the SVPp.
amitram (a + mitram)	amerdviṣati cet. (638). Here Pāṇini derives the word from √mi with "tra" as suffix and not a second word. Thus Pāṇini's inconsistency in the derivation of <i>mitra</i> and <i>amitra</i> is ob- vious.	

Instances are not wanting, where Pāṇini has rejected both the SVPp. and Yāska, and has offered his own derivation. To quote only one :—

SVPp.	Pāṇini.	Yāska.
usra (u + sra)	Pāṇini derives the word from √vas and thus the word is in- divisible. Cp. "sphā- yi tanci" (605).	"utrāviṇo syāṃ bho- gaḥ" Nir. IV. 9. This reading is adop- ted by Sāyaṇa on RV. III. 31. 11; but

SVPp.

Pāṇini.

Yāska.

Dr. Sarup adopts
“usrāviṇo’ syām.”

Instances may be found, where Pāṇinī has rejected the SVPp. and has accepted one (which is inferior) of the many derivations, given by Yāska. To quote only one :—

SVPp.

Pāṇini.

Yāska.

utsam (ut | sam)

udigranthikuśibhyaś-
ca (618). Pāṇini pre-
fers to derive the
word from √ ud,
which he does not
consider as prefix.

“utsaḥ | utsaraṇādvā |
utsadanādvā | utsya-
ndanādvā |” These
well accord with
SVPp. But “unat-
ter vā” (X. 9) goes
against it, and the
same has been ac-
cepted by Pāṇini.

Instances are not *wholly* wanting, where Pāṇini has rejected Yāska and the authorities quoted by him, and has accepted the view of the SVPp. The following is most significant :—

SVPp.

Pāṇini.

Yāska.

“agnim” this is
not divided by
the *pada* text.

Pāṇini derives the
word from √ anj. Cp.
“aṅger nalopaśca”
(608).

Yāska offers five
derivations of the
word :—

“agniḥ kasmāt | agra-
nīr bhavati | agraṃ
yajñeṣu prañiyate |
aṅgaṃ nayati sam-
namamānaḥ | ak-
nopano bhavatīti
sthaulāṣṭhivih | na
knopayati | na sne-
hayati | tribhya ākh-

SVPp.	Pāṇini.	Yāska.
		yātebhyo jāyata iti śakapūṇiḥ itāt uktāddagdhādvā ni- tāt" Nir. VII. 14.
		Now in all these de- rivations, the word must be divided.

Prathamah (Not separated in the Pp.)	prathermaśca (645)	"prathamah prata- mo bhavati" II. 22
---	--------------------	---

There are instances, where Pāṇini accepts Yāska only partly. To cite only one :—

SVPp.	Pāṇini.	Yāska.
ahaḥ (a han)	nañi jahāteḥ (603). Pāṇini regards <i>a</i> as representing nega- tion and not as a prefix. (= na hīyate, tyajyata ityahah).	"ahaḥ kasmāt upāha- rantyasmin karmā- ṇi (II.20). Yāska de- rives the word from √hr+ā which is re- jected by Pāṇini. The derivation ac- cording to the SVPp. would be, perhaps, "na hanyata itya- hah", which seems better, as it reflects the popular conti- nuity of the cycle of day and night. Thus the difference between the three grammarians, with regard to this word, seems to have been great.

There are instances, where Yāska offers numerous derivations for a word, but Pāṇini accepts only one, which accords with the SVPp. To cite only one :—

Yāska offers the following derivations for the word *indra*¹:—

“*indrah* | *irām* *drṇātīti* *vā* | *irām* *dadātīti* *vā* | *irām* *dadhātīti* *vā* | *irām* *dārayata* *iti* *vā* | *irām* *dhārayata* *iti* *vā* | *indave* *dravatīti* *vā* | *indau* *ramata* *iti* *vā* | *indhe bhūtānīti* *vā* | *tadya-* *denam* *prāṇaiḥ* *samaindhamstadindrasyendrattvamiti* *viññāyate* | *idaṃ* *karaṇādityāgrāyaṇaḥ* | *idaṃ* *darśanādityaupamanyavaḥ* | *indatervaiśvāryakarmaṇaḥ* | *indañchatrūṇām* *dārayitā* *vā* | *āda-* *rayitā* *vā* *yajvanām* ||” Nir. X. 8.

Of all these derivations only two, (a) “*indhe bhūtānī*” (b) “*indatervaiśvāryakarmaṇaḥ*” accord with the SVPp., which does not divide the word ; and the latter of the two has been actually accepted by Pāṇini, who forms the word with the *√idi*+*ra*. Cp. “*ṛjrendrāgravajra*” (607).

That Yāska tacitly follows the SVPp. need no longer be doubted, and I cite here only one or two specimen instances to illustrate the point :—

SVPp.	Pāṇini.	Yāska.
<i>puruṣa</i> ² . (Not divided in the SVPp.).		Yāska offers three derivations for the word :— “ <i>puri</i> <i>śādaḥ</i> <i>puri</i> <i>śayaḥ</i> <i>pūrayater-</i> <i>vā</i> <i>pūrayatyantaḥ</i> ” (1. 23). The last derivation accords with the SVPp., and has been accepted by Pāṇini.

1. Cp. Wackernagel, *Altind. Gr.* I. 157. note.

2. *puruṣa* = *pūruṣa* = *pūrṣa*. Cp. Wackernagel, *Altind. Gr.* I. 51-52.

SVPp.

sūryaḥ
(Divided only once).

adri
(Not divided in the SVPp.).

hiraṇya
(Not divided in the SVPp.).

Yāska.

Cp. "puraḥ kuśan"
(630).

Yāska offers three
derivations :—

"sartervā | suvatervā |
svirayatervā |"
(XII. 14).

The last (√ir+su)
derivation accords
with the division.

Yāska derives the
word :—

"adrirādrṇātyeva |
apī vātteḥ syāt"
(IV. 4).

The latter harmo-
nises with the SVPp.
and has been follow-
ed by Pāṇini. Cp.
"adi śadi bhū śubhi-
bhyāḥ krin" (629).

Yāska states :—

"hiraṇyaṃ kasmāt |
hriyata ā yamyamā-
namiti vā | hriyate
janājjanamiti vā |
hitaramaṇaṃ bha-
vatīti vā | hṛdaya-
ramaṇaṃ bhavatīti
vā | haryatervā syāt
prepsākarmaṇaḥ |"
(II. 10).

SVPp.

Yāska.

The first two and the last one accord with the SVPp.

Now, let us see some words, which are separated by the SVPp. and have been accordingly derived by Yāska and Pāṇini. Such are:—

SVPp.	Pāṇini.	Yāska.
svasti (su + asti)	sāvaseḥ (638).	"svasti + su astīti" (III. 21).
candramāḥ (candra + māḥ)	candre mo ḍit (641).	"cāyan dramati + candro mātā + chandram mānamasyeti vā + " (XI. 5).
adbhutam (ad + bhutam)	adi bhuvo ḍutac (642).	"ad bhutam + idama-pītaradadbhutama-bhūtamivānyasya + " (1. 67). The word is omitted in the Index by Dr. Sarup.
dūrāt (duḥ + āt)	durīṇo lopaśca (606).	"dūram kasmāt + dru-taṃ bhavati + dūrayaṃ vā + " (III. 9).
uccā ¹ (ud + cā)	udi cerdaisiḥ (642). (for uccaiḥ)	"uccairuccitaṃ bhavati" (IV. 24).
vātāpyāya (vāta + āpyāya)	vātapramiḥ (625). (which is similar).	"vātāpyamudakaṃ bhavati + vāta eta-

1. Cp. avyayānām CA. (IV 71) which negatives the division of indeclinables. The commentator cites "uccā, nīcāt". But cp. Macdonell, Vedic Gr. p. 30. In other respects there is a close resemblance between the Padapāṭhas of SV. and AV. For instance "pṛtanāṣāt" is not divided in SVPp, it is also indivisible in AVPp. Cp. "sanāvāḍante" CA. IV-70. "viśpatim" is not divided in SVPp. p. 196. It is also not separated in AVPp. Cp. CA. IV, 60. Cf. also Whitney 1084 a.

SVPp

Pāṇini

Yaska

dāpyāyayati ।"

"upamimite"(III 13)

gavyūti¹ (go । yūti)

"goryutau chandasyupasamkhyānam"
a vārtika on Pāṇini VI 1 79

sakhī (sa । khī)

"samāne khyah sa codāttah" (635) See how
closely Pāṇini follows the Pp

udaram (u । daram)

"udī dr̥nāterajalau pūrvapadāntyalopśca"
(642) This is most significant, and makes it
unmistakably clear that Pāṇini has closely
followed the SVPp

These are some of the typical instances, which provoked
Dr Burnell to remark —

"These specimens of the Padapāṭha of the Kauthumas
are not calculated to give a high opinion of its author or
authors, who were not even consistent in their treatment of
the words"

But how beautifully *cogent* and *charming* does it all
look, when read in the light of the comparison with Yaska
and Pāṇini ?

It is clear, at any rate, from the above shown compari-
son, that there is a remarkable affinity between the deriva-

¹ Bohtlink and Roth analyse gavyūti. Cp also Macdonell, Vedic
Gr p 65

tions implied by the SVPp. and those given by Yāska and Pāṇini.

Granting this, let us now proceed with the *authorship* of the SVPp. Now, the most glaring feature of contrast between the SVPp. and RVPp. is this, that, while *the former invariably separates the prefix from the word, the latter, as a principle, does not do so.* This will be clear from the following :—

		SVPp.	RVPp.
parīṇasi	=	pari nasi	parīṇasi
dūrāt	=	duḥ āt	dūrāt
duroṇe	=	duḥ one	duroṇe
utsaḥ	=	ut saḥ	utsaḥ
samudram	=	sam udram	samudram
samatsu	=	sam atsu	samatsu
samidbhiḥ	=	sam idbhiḥ	samidbhiḥ
viśūvataḥ	=	vi suvataḥ	viśūsvataḥ
sūnṛtāvati	=	su nṛtāvati	sūnṛtāśvati
samānam	=	sam ānam	samānam
prāṇaḥ	=	pra ānaḥ	prāṇaḥ
duroṇayuh	=	duḥ onayuh	duroṇasyuh
upamām	=	upa mām	upamām
samīcīne	=	sam īcīne	samīcīne

This shows that the SVPp. regards the *prefix* as a virtually *independent element*, and hence invariably separates it from the word, while the RVPp. holds the *prefix* as a mere *ancillary to the word*, and so, nowhere makes the like separation. Bearing this in our mind, when we read in Yāska :—

“na nirbaddhā upasargā arthānnirāhuriti śakāṭāyanaḥ | uccāvacāḥ padārthā bhavantiti gārgyaḥ | tadya eṣu padārthaḥ prāhurime tam |” (1. 3)

we are irresistibly driven to the only conclusion that the author of the SVPp. was none else, but Gārgya, who was the chief exponent of this peculiar doctrine. And this assump-

tion is confirmed by the tradition, recorded by Durga in his commentary on Nirukta IV. 4.

These indications ought to have made Burnell pause before he wrote down his dictum :—

“Were it possible to conclude that we have in it (SVPp.) the work of one of the earliest of the grammarians, such as Gārgya, it would deserve the minutest consideration, but there is not the slightest reason to give credit to the tradition as reported by Durgācārya, nor is there sufficient reason to suppose that this *pada* text is even an old work of the kind.” (RT. XXI.)

What a terrible disregard for the tradition ? All that was based on tradition was torn to tatters, so much so that the *winged words* of the Veda, Epics and Purāṇas were shown as no more than a poetic myth. Little did the early Indologists know that a careful comparison of these literary remains of our forefathers with their monumental inscriptions would one day help in placing the universal history on a firmer foundation than before¹. By this I do not imply that all Indian traditions are correct and trustworthy, nor do I think that that claim can be made on behalf of the traditions of any other country in particular. All what I want to press home is that the traditions of a country, despite the embellishments which they invariably receive at the hands of the mythmongering bards, are the bearer of its history and therefore must not be, *in toto*, rejected, unless there be sure grounds against them.

But admitting that the extant SVPp. did originate with Gārgya, can we emphatically say “*It is, in toto, the creation of Gārgya.*”

1. Waddel, *Makers of Civilisation in Race and History*. Preface pp. XXI, XXIII. though he very often makes sweeping remarks and is not reliable otherwise as well

The answer will be *No*. And the reasons are patent. The word "sūrya" occurs, in its different forms, 38 times in the SVPp. Out of 38, 37 times it is not divided, but on p. 80 we find "sūryasya" split up into "su | ūryasya." The fact seems significant, because this division occurs in the commentary on the rule 93, and it may indicate that this solitary "su | ūryasya" is an intrusion in the SVPp. from the side of Śākaṭāyana. "samatsu" is not divided on pp. 12, 36, but it has been split up into "sa | matsu (on pp. 47, 177, 199, 222) which militates against the usual way of analysing prefixes, and Benfey actually notes "sam | atsu¹." "āditya" has not been divided in the *pada* text but the derivation offered by Yāska² requires separation, and Burnell has actually noted one case, where the word has been rightly split up into "ā | ditya³." "pariśrava" is not divided (on p. 154), and so is "upamānām⁴" on p. 159. "svastyayaṇiḥ" is not split up, but "svastibhiḥ" has been rightly divided into "su | asti-bhiḥ." "uccā" is divided into "ut | cā", a division accepted by Yāska and Pāṇini, but "nīca" is not split up, though Yāska and Pāṇini require it⁵. "avadyāt" is not analysed, though *a* here represents negation, and Pāṇini accordingly analyses it as "a-vad-ya⁶". "asiknī" is not analysed, though Yāska's derivation⁷

1. Benfey SV. Einl. LIX.

2. "ādityaḥ kasmāt | ādatte rasān | ādatte bhāsam jyotiṣām |
ādīpto bhāseti vā | aditeḥ putra iti vā | " Nir. II. 13.

3. RT. XVII.

4. Whitney (CA. IV 53) has given quite a list of compounds and derivatives, the division of which may plausibly be supposed to have been neglected by the authors of the AVPp, from uncertainty of etymology, anomaly of forms, difficulty of restoring the original constituents, or the like. He has also noted the discordance among the *pada* texts of the Vedas in details. Significant, however, is the difference in noting "saṃvatsara". The RVPp. never divides the word, while the AVPp. invariably writes sam | vatsara.

5. "nicairnicitam bhavati". Nir, IV. 24; "nau dirghaśca" SK. p. 642

6. "kutsite vadernaṇi yat." SK p. 644

7. "asita | sitamiti varṇanāma | tat pratiṣedho' sitam | " Nir. IV. 26.

favours it. "śambaram" has been split up into "śam + baram", though the later authorities regard "śmba" as one word¹. "nijaghnih | nijaghnih" may be, obviously, explained as a slip of printing².

Such are the many anomalies in which the *Pada* text abounds. Some of them may be the whims of the original author, some may be attributed to the ignorant scribes³ and yet others to the printers.

But the question of vital concern to us, here, is :—

Do we find any trace of Śākaṭāyana in it ?

The answer is Yes. We have already suspected Śākaṭāyana's hand in the solitary "su + ūryasya" in the SVPP. RPr. I. 3 states that according to Gārgya, the *third consonant of each class* is to be used as a final. Instead of following this rule, the *Pada* text, adopts the contrary, viz. that of Śākaṭāyana, that the *first of a class* can only be a final⁴. Some of the derivations, which are found alike in the SVPP. and the RT., may also be attributed to Śākaṭāyana.

One thing more. Yaska states that Śākaṭāyana⁵ did not

1. "śamba iti vajranāma | śamayatorvā | śātayatorvā | " Nir. V. 24. "śamvaban". SK 631 See also "śamvabuk ca" (śambukah 628 and "janvabuk jambūkah 628). In such words the origin of *b* is obscure. Most of these probably come from a foreign source, Cp Macdonell, Vedic Gr. p. 36.

2. Owing to the ignorance of scribes mistakes crept in the RVPp. Cf Macdonell, Vedic Grammar p. 67 (74a).

3. A striking instance of such a slip occurs in the commentary of PpS VII 288, where the MS. reads "madhyamayavārum" for "sandhyamayavāyam (RT. 111), where R. Simon puts a query mark Cp, R. Simon, PpS. p. 676. RT. 117 is also quoted on this sūtra of the PpS

4. "tasmādantyamavasāne tṛtīyam gargyaḥ sparśam." RPr. I. 15 "prathamam śākaṭāyanah RPr. I. 16. But cp 172, which presumes the finals in the SVPP. as *third* of the series, and not the *first*. The rule came into Śākaṭāyana's treatise from the side of Gargya. This will show how difficult it is to ascertain the value of the discordant facts recorded pellmell

5. "na nirbaddhā upasargā arthānnirāhuritī śākaṭāyanah" Nir I. 3

consider the prefix as an independent element, but the RT., based as it is on the extant SVPp., regards it as an independent element. Thus, we find a *Pada* text, attributed to Gārgya and a *Prātiśākhya* attributed to Śākaṭāyana, but in neither case, the peculiar doctrines, attributed to them, are fully found. *How to explain this?*

While discussing the precise scope of a *Prātiśākhya*, we noted, that, towards the close of the Brāhmaṇa period, the tendency for generalisation arose, which slowly and gradually reduced the numerous Śākhās of a Veda to the minimum, and subsequently led to the unification of the different *Prātiśākhyas* of a Veda into one. Stretching this argument a little further, we may assume, that, both the SVPp. and the RT. were much modified in later times, to suit the then current views of the Sanskrit grammarians, particularly Sāmavedins; and it was, probably, during that process of give and take, that the followers of Śākaṭāyana sacrificed their distinct treatise on the *Pada* text¹, and the followers of Gārgya forwent their *Prātiśākhya*, thus ultimately effecting the virtual unity of the rival schools².

VIII

The Age of the RT.

The above-shown arguments make the question of the age of the RT. a little easy. To start with, the author of *Gobhiliyagr̥hyakarmaprakāśikā*³ and the commentator on *Puspasūtra* quote its⁴ sūtras; and Kaiyaṭa⁵, though not quite

1. The followers of Śākaṭāyana went so far as to actually incorporate one of Gārgya's rules into their treatise. Cp. rule 172.

2. That such a thing happened in the case of the AVPp. was suspected by Whitney. Cp. C.A. IV. 74.

3. Cp. "atha vāco vṛttim vyākhyāsyāmaḥ; idaṃ vaiyākaraṇāya" GGKP. p. 122.

4. On PpS. 787.

5. On Pāṇini IV. 2. 60 "ukthārthamiti sāmālakṣaṇaṃ prātiśākhyaṃ śāstramityarthaḥ | " The reference is not explicit to justify the identification. Cp. Weber, Ind. Lit. Gesch. p. 91 note. Burnell, Arbr. Int. XX.

explicit, refers to it. Carapavyūha¹ mentions Ṛktantra and Sāmatantra. The Śikṣā², which is supposed to be the forerunner to the Prātiśākhya³, quotes it, (in the name of Audavraji), and the author of Ṛktantravivṛti⁴, a comparatively late work, of course, explains the word "smṛtaḥ" occurring in the Nāradaśikṣā as "ṛktantrakārādibhiḥ smṛtā ityarthah." Coupled with these indications, the assumption, that the author of the above-named treatises, together with the Puṣpasūtra, whose authorship has been till now quite uncertain, was Puṣpayāśa Audavraji, who is mentioned by the Vamśa-brāhmaṇa⁵ among the illustrious ancients of the SV., (backed by Caland's hypothesis⁶ that Puṣpasūtra is earlier than the Ūha and Ūhyagānas), makes out our treatise, in its original form, older than other Prātiśākhyas. And this does not cause any surprise, when we note, that, while the Prātiśākhyas are devised to preserve the text of the Saṃhitās, and are, therefore, in a way, theoretic, the Sāmatantra and Puṣpasūtra were created to turn the ṛc into sāmans, that were sung at the Soma-sacrifices, which existed long before the Prātiśākhya literature arose. Thus, Ṛktantra, in its original form, is not later than other Prātiśākhyas.

1. "tatra kecit punarṛktantram sāmāntantram sañjñādhātulakṣaṇamiti vidhiyante | " Śaunakiyacarapavyūha II. On Sañjñādhātulakṣaṇa cp. Caland PVB. Introduction p. VII. On the Carapavyūhas cp. Weber, Ind. Lit. Gesch. 105, 157; Burnell, RT. p. XIII. note; Muller places these Prātiśākhyas later than the sūtra period. Cp. Anc. Skt. Lit. p. 249.

2. Cp. footnote on 60.

3. The Śikṣās are primitive, Haug, Über den Wessen pp. 53, 63-4 They belong to Pāṇiniyan school of Sanskrit grammar, Burnell, Arbr. p. XX. Śikṣās are modern. Kilhorn, Ind. Ant. V. pp. 141 et seq., The TPr. is older than the Vyāsa śikṣā. Lüders, Vyāsaśikṣā, Einl. p. 3-4, 16. Śikṣās are forerunner to the Prātiśākhyas. S. Varma, Critical Studies pp. 13-14.

4. Printed in the end; the author refers to Śayana, Cp. notes on Vivṛti.

5. "puṣpayāśasa audavrajaḥ puṣpayāśa audavrajih" Vamśabrāhmaṇa p. 11.

6 I have questioned its accuracy.

In its second stage, i.e. as the work of Śākaṭāyana, it is not later than other Prātiśākhya. Śākaṭāyana is quoted by RPr. VPr., and CA.

In its third stage, the work may be later than Pāṇini¹ and even Kātyāyana.

IX

Analysis of the RT.

i

1. Introductory and explanatory.

- (1) The origin and general mode of production of articulate sounds.
- (2) Enumeration of vowels and consonants ; definition of terms (visarjaniya, jihvāmūliya, upadhmāniya, anunāsika, yama and anusvāra).

1. And this is exactly what Westergaard concluded about other Prātiśākhya. Cp. *Über den ältesten Zeitraum* p. 67. Burnell agrees with it. Cp. RT. p. LVI. But Burnell rightly adds that all the Prātiśākhya, in their original form, existed before Pāṇini. In his essay on the Aindra School of Grammarians he concludes "Aindra was the oldest school of Sanskrit grammar and that Aindra treatises were actually known and quoted by Pāṇini and others, and that Aindra treatises still exist in the Prātiśākhya, in the Kātantra and in similar works, though they have been partly recast or corrected." And again, "The Aindra treatises belong to a system older than Pāṇini's, though here is perhaps reason to believe that not one of them is, as a whole, older than the grammar of the last"

I may add, that Audavraji was perhaps one of the greatest exponents of Aindra School of grammar, who had the three analytic works of the SV. to his credit; and it seems significant, that the majority of the ācāryas, quoted by TPr., belong to the Sāmaveda, because their names occur in the Śrauta sūtras of Lātyāyana and Drāhyāyana. It seems that grammar was the favourite subject of the Sāmavedins ; and they, in this sphere, commanded the respect of the followers of other Vedas, as is evident from the close relationship, in which CA. stands to it; and the fact was apparently known to the authors of the gloss on Pāṇiniyaśikṣā, who very often cites the authority of Audavraji, Nāradaśikṣā and other Sāmavedic works, to the virtual exclusion of others.

- (3) *kāra* forms names of letters; *a* forms name of consonants; *epha* forms name of *r*; mode of formation of alphabetic sounds. Different order of letters for the sake of *pratyāhāras*.

ii

- (1) General provision for the irregular *sandhis* in compounds.
- (2) Mode of utterance of vowels and consonants. 2-10, *saṃsvāda* and *nigūra* have no particular *sthāna* 11; mode of utterance of *nāsikyas* 12; *varga*, with first mute, forms names of series 13; sonants 14-16; the last of the series is nasal 17; final simple vowels nasalised 18; long *ī* nasalised 19.
- (3) Division of syllables 20-26.
- (4) *saṃyogasañjñā*.
- (5) Quantity of consonants, 28; *gati* 29; *e* and *o* 30.
- (6) *vṛttis* i.e. *drutā*, *madhyamā* and *vilambitā* 31-33.
- (7) *Pause* between two individual sounds 34; between two vowels 35; in the pause 30; at the end of the half of a verse 37; in *gāthās* 38; in *sāman* 39.
- (9) The length of a short vowel 40; definition of *aṇu* 41; standard of a long vowel 43; of *vṛddha* 44; in *vaiśvarya* 45.
- (10) Definition of *akṣara* 46; a consonant also is *akṣara* 47-48; a short vowel is equal to a long one, if followed by conjunct consonants 49; a long vowel is called *guru* 50.
- (11) Accentuation 51-60.

iii

- (1) Prescription of *ekaśruti* after a circumflex 61; there is only one main accent (*udātta*) in a *pada* 62; *padas* are the basis of *saṃhitā* 63; euphonic alteration takes place in the *padas* 64; 65 there is only one main accent

Under the head of the conversion of *Pada* text into the *Samhitā*, the *Prātiśākhya*s differ only on minor points, or in the treatment of special cases, pertaining to the text, with which each of them has to deal.

These are the subjects, which every *Prātiśākhya* must tackle, and these are the only ones that are found in our treatise. In these matters our *Prātiśākhya* bears a close affinity towards the CĀ. and Whitney has rightly observed the close relationship between the two. Both the treatises make extensive use of the *gaṇas* in the construction of their rules. The three *Prātiśākhya*s, in order to show the precise ken of a particular *sandhi*, register long series of examples, while these two *Prātiśākhya*s catch hold of the minute principle underlying them all, and with its help, cover in one rule, what takes so much space in others. It is this, which has enabled them, while including so much, to be at the same time, so much the briefest. These, and the like things approximate them to the character of the general Sanskrit grammar, as principally and finally represented by Pāṇini.

Whether these peculiarities, will help in any way, to determine the chronological relation of our treatise to the other *Prātiśākhya*s, is very doubtful. The discussions held by Burnell, on this point, have yielded nothing positive. Those were based, more or less, upon the assumption, that the appearance in a *Prātiśākhya*, of a phase of grammatical treatment, or its phraseology, is an evidence of its later composition. But the fallacious nature of this argument was long ago shown by Whitney, and it carries, indeed, absolutely no weight, so far as our treatise is concerned, in which, composed as it is, by an *ācārya*, who was himself a great grammarian, the introduction of such characteristics was quite unavoidable.

Other *Prātiśākhya*s, including, of course, CĀ., treat the construction of *pada* text, *krama* text, and sundry other

things¹. The SV. has no *Krama* text ; there may have been supplementary treatise on the SV. *Pada* text, and tradition actually ascribes such a one to the author of the RT. himself.

The construction of *Krama* text is not touched upon in TPr., and the portions of RPr. and CA. which concern it, may be later accretions in the text. The construction of the *Pada* text, receives still more scanty notice, being entirely passed over in the TPr., and represented in the VPr. only by a few scattering rules, relating to the special cases, analogous with those, found in the earlier chapters of the CA. The VPr. alone, treats the subject at large. Of matters, that are more or less, akin to the substance of the *Prātiśākyas*, yet omissible without detriment to their completeness as *Prātiśākyas*, Whitney has given a detailed comparison, and the same need not be recounted here.

It is, thus, seen that the *Rktaṇtra* does not materially differ in its range of subjects from the other treatises of its class. That it often oversteps the limits of the subject, which it is treating, or of the sphere of such a work, as we claim it to be, or in which it contemplates euphonic combinations for words, that are not found in the SV., has been shown at large in notes. I have also shown in details in the notes, that this treatise, like the CA., is less comprehensive than the RPr. I would, however, refer to the phenomenon of the elision of *a* after *e* and *o*, which I particularly reserved for this place :—

In the Benfeyin text of the SV. this *sandhi* may be tabulated as follows :—

A. <i>a</i> retained after <i>e</i> or <i>o</i>	463
B. <i>a</i> elided after <i>e</i> or <i>o</i>	145
	<hr/>
Total	608

1. For details see Whitney, TPr. 429 ff.; Luders, *Vyāsaśikṣā* 23 ff.; Raṅgācārya and Shāma Sastri, TPr. Int. p. 35 ff. As for the *Krama* pāṭha in TPr. cp Luders, *Vyāsaśikṣā* p. 35 ff.; Whitney, TPr. p. 429.

For (a) cf. 1161, 1162, 1172, 1175, 1177, 1197, 1199, 1200 (3), 1206, 1207, 1213, 1221 1224 and 1228.

For (b) cf. I. 7, 49 84, 88, 97, 98, 132, 146, 219, 233, 239, 246, 250, 263, 272, 279, 302, 304, 305, 314, 326, 342, 351, 352, 371, 402, 408, 411, 412, 413, 414, 425, 466, 478, 503, 510, 519, 521, 523 542 (2), 548, 555, 563, 584; II. 2, 9, 27, 30, 43 (2), 55, 58, 103, 114, 126, 138 148, 163, 182, 221, 226, 232, 243, 271, 276, 281, 298, 318, 329, 332, 341, 344, 352, 353, 380, 382, 415, 450, 451. 463, 501, 541, 547, 549, 568, 569, 599, 603 (2), 605, 609, 617, 622, 625, 630, 645, 662, 692, 699, 700, 723, 769, 773, 774, 783. 788, 791 (2) 792, 805 (2) 827, 839, 888, 894, 902, 919, 920, 922, 930, 949, 955, 958, 972, 997, 1044, 1065, 1071, 1077, 1090, 1106 1108, 1134, 1155, 1156, 1177, 1180, 1195, 1202, 1208 (2), 1215, 1224 and 1225.

It will be clear from the above-table that the common custom with regard to this *sandhi* in our *Saṃhitā* is to retain *a*; the retention being to the omission as 3½-1. In the interior of a *pāda*, it is practically always retained, excepting of course, passages, where *a* is followed by *v* (not joined with consonants that make it liable to doubling), in which case the omission is inevitable, so much so, that, while in the RV. 7. 32. 27 we read 'mā śivāso avakramuḥ' noted as a counter example on RPr. II. 40, the text in the SV. has 'mā śivāso' vakramuḥ' (II. 105); thus showing that the tendency of omitting *a* before *v*, which had stray exceptions in the RV., became a universal law in the SV. This kind of elision occurs 19 times in SV., though in all the passages the metre requires retention of *a*. In SV. I. 584; II. 318, 447, 622 the *a* is elided, not because it is followed by *v*, but because here it stands at the beginning of a *pāda*. in which situation omission is certain, barring, of course, a few cases noted in 77 and 82.

According to Whitney's counting the proportion of omissions to retentions in such a situation in the AV. (cf.

CA. II. 54) is 5 to 1 ; and in the R̥gveda it is still larger¹; and there may be very few instances in the earlier portions² of that text, where the custom of omission of *a* at the beginning of a pāda is not followed. The practice is scrupulously observed in SV; and our treatise notes only I. 450 'citro agni-rmarutaḥ', where the *a*, standing at the beginning of a pāda, is not elided.

As for the instances, where *a* standing in the interior of a pāda is elided, it notes (a) SV. I. 466 = RV. 2. 22. 4, noted by RPr. II. 42; (b) SV. I. 519 = RV. 9. 107. 6 not noted by Uvaṭa, but covered by RPr. II. 37. But here comes one difficulty, and it is this, that, if we interpret, the word "nyūne" (RT. S. 76) in the way, we have already done, this rule (RT. 78) becomes superfluous, because in both cases the metre requires omission, as in 'pādo 'sya' (ĀrS. 34, 35), and if we understand by the word only "antaḥpādam" and no more, then we have no provision in our treatise for several omissions. Leaving aside SV. I. 413, 414, 425; II 1090, 1108, which seem of one and the same metre, and where *a* stands at the beginning of the second or third pāda, we take SV. II. 773, which reads :—

"te asya santu ketavo' mṛtyavo,' dābhyāso januṣī ubhe anu = RV. 9. 70. 3.

1. (a) In the RV. it is elided in about 75 percent, in the AV. in about 66 percent of its occurrences. In the RV. it must be pronounced in 99 percent, in the AV. and the metrical parts of the YV. in about 80 percent of its occurrences. Cp. Macdonell, Vedic Gr. for Students p. 23.

(b) The few instances (70 out of 4500) of the elision of *a* in the RV. are the forerunners of the invariable practice of post Vedic Sanskrit. Cp. Macdonell, Vedic Gr. p. 66. The frequent elision of the *a* in the written text compared with its almost invariable retention in the original text of the RV. indicates a period of transition between the latter and the total elision of the post Vedic period.

2. Cp. Arnold, (Vedic Metre) who divides the collection into five layers. Against this cp. Keith, JRAS, 1906 pp. 486-90; 1912 pp. 726-9; the Rel. and Phil. of the Veda, Vol I pp. 3-4.

It is a triṣṭubh stanza, the commonest in the RV., consisting of four verses of eleven syllables, divided into two hemistichs; and as the *a* of "amṛtyavo" does not stand at the beginning of a pāda, it should not be elided in RV. according to RPr. II. 35 and in SV. according to 76. But while RPr. II. 37 (Uvaṭa does not note this example there) provides for the usage in RV., our treatise leaves it entirely unnoticed. Similar is "ye no amho'tipiprati" II. 700 = RV. 7. 66. 5 (noted by RPr. II. 42) and "saṃkrandano' nimiṣa ekavītraḥ" II. 1202 = RV. 10. 103. 1 (RPr. II. 41). Then, there is II. 462, which is incomplete and reads "pravo'rcopa°". The full *mantra* must be anything but "pra vo mahe matayo yantu viṣṇave" I. 462; and "pra vo mahe mahe vṛdhe" I. 328 = II. 1146. It is not "pra vo mahe mandamānāyāndhaso" RV. 10. 50. 1, because here we have "upa", while the third pāda in RV. runs "indrasya yasya samukhaṃ." At any rate, the *a* in "pravo'rcopa" is not a pādādi one, and its elision is not noted by our treatise. Again SV. II. 1224 runs:—

andhā amitṛā bhavataśīrṣāṇo' haya iva ।

teṣāṃ vo agnīnunnānāmindro hantu varaṃ varaṃ ॥

The stanza is wanting in RV., but is found in AV. in the following form:—

mūḍhā amitṛāscaratā śīrṣāṇa ivāhayaḥ ।

teṣāṃ vo agnīmūḍhānāmindro hantu varaṃ varaṃ ॥

Well, if the reading of the text be correct, the example is not noted by our treatise. Then, there is SV. II. 1225, which runs:—

yo naḥ svo 'raṇo yaśca niṣṭyo jighāṃsati ॥

This occurs in the RV. (VI. 75. 19) with *a*:—

yo naḥ svo araṇo yaśca° ॥

"svo'raṇo" has been noted by Śaurisūnu in his *Rktantra-saṅgraha*; and this leaves for us no option but to assume that the example is not noted by our *Prātiśākhya*.

With regard to this phenomenon, the RPr. seems thorough, and as far as I have been able to examine the text of the RV., I have found that the Prātiśākhya covers almost all the cases of retention and omission. The following examples are not noted by Pāṇini, but are covered by the RPr. :—

yo'ti 8. 2. 34 = RPr. II. 47; dipsavo'da° 7. 104. 12 = 37; yo'dhvanah 1. 71. 9 = 47; manaso'dhi 7. 33. 11-47; no'dhi 8. 96. 20 = 46. samkrandano'nimiṣah 10. 103. 1 = 41; yo'nayat 7 = 18. 7 = 47; agne'pa° 7. 1. 7 = 47; agne'bhi° 1. 71. 11 = 42; gave 'śva° 8. 30. 4 = 37; abodhayo' him 1. 103. 7 = 37 and so on. Cp. Benfey, SV. Einl. XXXI.

Thus, there are, to be sure, here and there, points, in the text of the SV. which are not covered by the rules of our treatise, but we have reason only to wonder, that in executing so immense and intricate a task, as that undertaken by our treatise, which has strictly boycotted the device of enumerating individual examples, so frequently used by the RPr. VPr. and TPr., there should have been so few oversights. Such oversights have been noted by Whitney in TPr. and CA., and the same may be found in the VPr., if a thorough examination of the same is carried out. The only Prātiśākhya which seems free from this defect is RPr., which from the point of view of dignified style, and the mastery of the material with which it deals, occupies undoubtedly the *first rank* in the Prātiśākhya literature. The results of such a testing with regard to the RV. and RPr. will be found scattered in the notes on the RT., and they need not be recapitulated here. As an example I would however, refer here to the phenomenon of lengthening of the final vowels in the RV., which has been treated in the VII and VIII chapters of the RPr., and which, upon a minute examination, has been found entirely free from all oversights. I append herewith, the full list of the cases of lengthening in the RV., putting against each example, the rule of the Prātiśākhya, which covers it :—

1. Cp. Whitney, TPr. p. 426 and CA. 580-581.

XI

The Commentary.

Turning now to the special consideration of the commentary on the text we may note the following points:—

1. It is extremely curt and concise and is written virtually in a sūtra style. At places, it leaves us entirely at the mercy of guess and conjecture. Cp. 73, 76, 168, 246 and 280, where the commentator, in some respects, is more obscure and concise than the text¹.

1. Cp. notes on these sūtras. On 116 he says 'trirakrāntagrahapāt.' Here "trih" means trivāram=three times. Similar is "trirdvih" on 280. It was only by a stroke of good fortune that I hit at the right meaning of these mystic utterances.

2. The text has not come down to him as perfectly authoritative and sacred and he rightly questions the validity of some sūtras¹, prescribes vārtikas², and finally provides for its deficiencies³.

3. He makes extensive use of the adhikāras and this shows that he knew the tradition of the Sāmavedic grammar exceptionally well. These adhikāras are of two kinds, i.e. adhyāhāras, where the thing is not said in the text, but has to be implied, as in 1. 133, 116, 146, and 236, and the adhikāras, which are supplied by the text, as in 20, 22, 28, 46, 54, 56, 59, 61, 67, 86, 96, 107, 109, 110. 115, 146, 185, 237, 238, 242, 243, (2), 244, (2) 247, 255, 264, 281, 282 and 284.

4. He seems to be well acquainted with the Gaṇapāṭha of Pāṇini. Cp. 128 with note.

5. Here and there he oversteps the limits of a Pratiśākhya. Cp. 225 where he cites examples from Sāmavedic literature and then draws one from RV. and another from Aitaraya brāhmaṇa.

6. In citing examples he uses the following methods:—

- (i) He cites the opening of the verses, though the real example lies somewhere on in the stanza. Cp. note on 279.
- (ii) He names the melodies. Cp. 112, 113, 150, 162, 181, 260, 283, 284.
- (iii) He names the verses. Cp. note on 1.
- (iv) He cites the neighbouring word in a verse. Cp. 76, 116.
- (v) At places he gives the half of a word as an example. Cp. 148.

1. Cp. 157 and 280.

2. Cp. 143, 229, 243 245

3. Cp. 159, 226, 256, 238, 272.

7. At places the commentary seems incomplete. 141, 150 and 239. The last portion of the commentary these sūtras seems to be lacking in something. That there another, and possibly a larger recension of the commentary indicated by the Ms. B. on the 116, where the extra reading not found in Burnell, has been given in the footnotes. This fact is confirmed by the author of the gloss on the Vivṛti¹, and on the rule 56, clearly draws from a recension of the commentary, larger than that available to us.

XII

Who was the author of the Commentary ?

For determining the personality of the commentator, we have no data whatever, except that the author of the gloss Pāṇinīyaśikṣā once quotes from the commentary in the name of Audavraji², which is clearly wrong, as has been already shown.

About his place we know absolutely nothing and for the period we have only references, which though too few and indefinite to yield any unchallengable result need to be mentioned here. Our commentator cites on the rule 90 Nakulamukha cārya, who is unfortunately nowhere mentioned in Sanskrit literature, nor in any Worterbuch or list of Mss., and he is the only authority whom our commentator cites at that two only once.

But there is a ray of hope. Simon³ has shown that Upādhyāyājātaśātru, the commentator on Puṣpasūtra, lived about 950 A. D., and we know from his work that he utilized the ancient commentary of Bāhukācārya or Bāhuka bhāṣakāra⁴, who must have been a fairly ancient scholar. This

1. Cp. Rktaṇṭravivṛti on rule 56.

2. "Audavrajirapi 'sparśavargasya sparśagrahaṇe ca jñeyam" p. 11. it with RT. 13.

3. Simon, PpS. p. 499.

4. Simon, PpS. p. 498.

Bahūka, on PpS. 7. 288 quotes from our commentary¹ and this makes so much certain, that our commentator is older than Bahūka and may have flourished about the beginning of the Christian era.

One thing more. Our commentator cites exmples from the two Ārcikas, the two Gānas, Mahānāmniś, the two Śrauta-sūtras, the Brāhamaṇas, but nowhere from the later Gānas i.e. the Ūha and Ūhya gānas, which are supposed "pauruṣeya." This may be significant, but we cannot infer any statable result from this.

XIII.

Can we improve the text of the SV. with the help of the Prātiśākhya ?

The question is of the utmost importance, but the RT. and the Commentary offer little help in this matter². Śaurisūnu, the author of Laghurktantrasaṅgraha, who is more exhaustive than either, registers some cases, where the text of Benfey is at variance. I shall concern myself here only with one rule, which prescribes the omission of visarjanīya, when followed by *s* in conjunction with a consonant. Śaurisūnu registers the following examples of this rule :—

Śaurisūnu	SV.	Benfey.
vaca stuṣe	I. 87	The same
viśa stavetātithiḥ	I. 85	do
parā duṣvapnyam	I. 141	do
sakhāya stoma	I. 164	do
ya sma śrutavarman	I. 89.	do
jagataḥ swardr̥ṣam	I. 233	jagataḥ swardr̥ṣam

1. It runs "atra hi" gatiscāntasthāmāpadyate (cp. RT. 110) iti yakārā-pattiḥ | "raṁadhye" (RT. 159) iti lopah punaranena vacanena bhogapakaram bhavatiti eṣām bāhūka bhāṣyakāreṇa vyākhyānam krtam | asmadguravastu bruvate | " Simon has confused here the sūtras of Rt. Op. PpS. p. 676 n. 2.

2. Cp. however, "udag nyag vā" Benfey SV. I. 279, while the rule 173 and the Commentary require "udaṇ nyag vā,"

ā bhara svarvāṇ	I. 254	ā bharah svarvāṇ
vaca stotram	I. 255	vacaḥ stotram
bodhā na stomam	I. 313	The same.
mataya svaryuvaḥ ¹	I. 375	matayaḥ svaryuvaḥ.
vīra stavate	I. 385	The same
sakhāya stomyam	I. 387	do
tamu va stuṣe	I. 410	do
sacetasa svasare	I. 457	sacetasaḥ svasare
svādhyā svarvidah	I. 508	svādhyāḥ svarvidah
gomata stotr̥bhyo	II. 179	The same
indava svarvidah	II. 566	indavaḥ svarvidah
eṣa sya dhārayā	II. 584	The same
naki svaśva	II. 300	nakiḥ svaśva
pr̥thu svaruḥ	II. 687	pr̥thuḥ svaruḥ
hi ṣṭha svaḥ patī	II. 351	hi ṣṭhaḥ svaḥ patī
yukta stotr̥bhyah	II. 435	The same
pavamāna svardṛśam	II. 134	pavamānaḥ svadh- varaḥ in II. 611
rītyāpa svarvidah	II. 676	rītyāpaḥ svarvidah.
ya snīhitīṣu ²	II. 728	yaḥ snīhitīṣu
maghona sma	II. 1030	maghonaḥ sma
uṣasa svā 3 rgāḥ	II. 1225	uṣasaḥ svā 3 rgāḥ
mā na starabhimātaye	II. 770	The same
svādīya svādunā	II. 835	svādīyaḥ svādunā
rādha stuvate	II. 836	The same
svādo svādīyah	II. 834	svādoḥ svādīyah
revata stotā	II. 1157	The same
balavijñāya sthaviraḥ	II. 1206	balavijñāyah stha- viraḥ

1. The Mss. A. and B. both read "matayarvidah" (= mataya svarvidah) which is not found in the SV. It however, occurs in RV. 10. 43. 1. which reads :—

"accā ma indram matayaḥ svarvidah", for which SV. has :—

"accā va indram mataya svaryuvaḥ."

2. Mark "snihiteṣu" in A. and B., where Benfey has "snihitīṣu."

yo na svo'raṇo	II. 1225	The same
arepasa svādhyā svar- vidah (2)	II. 451	arepasah svādhyah svarvidah

It will be clear from the above-shown table that, out of 37 times, Benfey observes the rule of the *Sāmavedic* grammar only 17 times and violates it 20 times, without showing any reason whatsoever. Other anomalies¹ may be found upon a minute examination of the text; and the same will be treated in detail in the introduction of the *Laghuṛktantrasaṅgraha* and *Sāmasaptalakṣaṇa*, the publication of which may necessitate a fresh edition of the *Sāmaveda*.

¹ Cp also "pari nah" Benfey SV. II 247 and 560, where *Laghuṛktantrasaṅgraha* and VPr III. 88 (*pari na iti śākaṭāyanah*) require "pari nah" Cp RV. 8. 47 5; 9. 54, 5, 9 64, 18 etc, JS. and my note on RT. 274

NOTES

P. L.

- 1—2 वार्- Speech Speech is a series of sounds caused by expelling air from the lungs through differently shaped positions of the throat and mouth

वायुं प्रयतिम्. Air is the origin of sound. Cf. RPr XIII, 13 with Uvata's comm, VPr 1 7 9, TPr II 2, Pāṇinīyaśikṣā 6, Weber, Ind Stud IV, pp 350 351 For the fact that air is the origin of sound cf. Pagot, Human Speech pp 4 11
द्वारो नाद Cf. VPr 1 7

- 1—4 स श्वसिति Cf PŚiksā 9

जिह्वप्रणयमायस्य. The tongue plays most important part in articulation It is a muscular organ, constant in volume, but highly and very rapidly variable in form

- 1—5 Cf त्रयोहुरीदा with Uvata's note Besides, position, there are four other determining elements which cause the differentiation of articulate sounds viz, omission, closure, disposition of producing organ, and the quantity Cf TPr XXIII, 2

P L

- 1—6 The omission of Upadhānīya seems accidental

- 1—7 यं यं विम्बदेशं यस्मिन् यस्मिन् विम्बदेशे तत्रु निषिच्यते Locative preferable.

- 2—1 वरानां व्यक्तिर्भवति. According to the grammarians and the Mīmāṃsākas the sound—Sphota is eternal Our organs do not properly produce it, but their action brings it to the cognizance of the senses, as the action of digging brings water to light. Cf. Tribhāṣyaratna on TPr, II 1. See also Uvata on RPr, XIII, 14 According to Bhartṛhari the individual sounds create an impression in the human mind, which is thus able to perceive the word Spota the really indivisible word. Cf Vākya padīya 1 85 86, Kaiyaṣa on Pāṇini 1. 1. 73, Kaṇḍabhaṭṭa, Vaiyākaranabhūṣaṇasāra, Māṇana mītra, Sphoṭasiddhi

- 2—5 Samānākṣara is the name of simple vowels and Sandhyakṣara that of diphthongs In TPr, I 2 the nine Samānākṣaras intended are a ā

a3; i ī i3; u ū u3. The *r* and *l* vowels are denied the quality of simplicity or homogeneity though their structure as composed of heterogeneous elements is not set forth. RPr. XIII. 34, 35; VPr. IV. 145; and CA. I. 37-39 describe the formation of *r* and *l*, while our treatise does not. RPr. I. I; VPr. I. 44 include *r* *l* among the Samānākṣaras and CA. as pointed out by Whitney seems to recognise the same classification.

2—6 The diphthongs are vowel sounds, which though not simple and homogeneous, yet form but a single syllable, and are treated as if they were simple sounds. RPr. XIII. 39 cites Śākatāyana as holding that *a* forms half of each and *i* and *u* the remaining half. RPr. XIII. 40 states that *e* *o* on account of the fusion of two elements have sound in which the two elements are not distinct. According to RPr. XIII. 38 the Sandhyakṣaras have double position. The VPr. I. 73 specifies only *ai* and *au* as made up of two elements and directs them (IV. 14) to be treated as simple sounds. एकवर्णौ=एकप्रयत्ननिर्वर्त्यौ Uva-ta. See also TPr. II. 13, 14, 15, 17, 23, 26, 29. For details see Whitney, CA. I. 40.

2—7 (a) गतिः-lengthening of a stobha vowel through the incoming of an *i* or *u* (adding *i* or *u* after *ā* or *i*

after *o*). For *hā-i* or *hā-yi* (for the insertion of *y* cf. Weber, Ind. Stud. 4. 252, Wackernagel I. p. 338) see PpS. 5, 119-190: for *ho-hoyi*=*hoi* 5. 127, 169: for *hā-hā-yi* or *hā-i*. 5, 127, 129. 131-3. 140. 142. 170; for *ā-uva* *ā-uvāyi* or *ā-uvai* 5, 183, 184.

(b) In fact *ā-i* and *ā-u* are regarded as variants of *ā*; *o-i* of *o*. See Pps. 5. 119-190.

(c) A form that shows an initial *h*, is regarded as a variant of the stobha without an *h*; *hā-i* is a variant of *ā-i*, *ho-i* of *o-i*, *hup* of *up*. See also *ho-idā-oidā*. For details see Simon, PpS. p. 520; J. M. Van Der Hoogt, The Vedic Chant p. 20.

स्वरः. For the definition of vowel cf. Daniel Jones, Outline of Eng. Phon. p. 20. For lines 5-15 cp. VPr. VIII. 1-14.

2-10 अन्तस्थाः=*y*, *r*, *l*, *v*. These have this peculiarity that each has a vowel corresponding to it, viz, *i*, *r*, *l* *u*. These were named 'antastha' intermediate, standing midway (between vowels and consonants) in reference to the mode of their formation, as being neither by a complete contact, like the full mutes, nor by an open position, like the vowels. Thus "antastha" virtually accords to semivowel. For the definition of semivowel cf. Daniel Jones (Outline of Eng. Phon. pp. 25, 291) The word 'antastha' occurs in RPr. I. 9; VPr. IV. 102; CA. I. 30; Nir.

II 2, For the meaning of antastha cp. Whitney, CA I 30, Macdonell, Vedic Gr p. 40, Wackernagel, Altind. Gr. I p 197 note.

2-11 For the unusual order of akṣaras cf Uvata on RPr I, 3

2-12 अमारादिना वर्णरामाम्नायेन सहिता सन्त एते वदन्त्यात्मनामं प्राप्नुवन्तीत्ययोगवाहा .

अ इति विसर्जनीय Visarjanīya is pronounced as a voiceless breathing. This very pronunciation prevailed in the time of the Prāṭisākhya, since they describe it as an āśman, the common term for breathings and sibilants. Cf Macdonell, Vedic Gr. p 54, Wackernagel, Altind. Gr I pp 259 260 For its place of articulation see note on 2. The term visarjya in the meaning of Visarjanīya does not occur in the Prāṭisākhya and Pāṇini ऋइति पऋइति जिह्वामूलीय (formed at the root of the tongue) and उपध्मानीय (onbreathing) the two voiceless breathings, had both separate characters in the alphabets of the earlier centuries A D, but for nearly a thousand years they are obsolete. This may be the reason why our Prāṭisākhya does not prescribe any rule for these. See Barnell, Elements of South Ind. Pal 2nd ed Plate XXIV. They are, however, employed in Kāśmīrian Śaradā mss.

2-13 हुमिति हु इति नासिक्य seems correct. Nasikya is a name of the nasal insertion between h and

the following nasal Cf VPr. VIII 13 and my note on नासिक्या यमानुस्वारनासिक्या (RT. 12)

The Yamas are transitional sounds, assumed to intervene between non nasal and following nasal, as a kind of nasal counterpart of the non nasal, and therefore called its yama or twin. For the explanation of Yama Cf Whitney CA I 99.

The theory of Yama is in a way similar to that theory according to which a *t* is introduced between *a* and *s*. For Yama cf CA I 99, TPr XXI 12, 13, VPr IV. 160 RPr is more explicit on this point. After stating (I 48) that the Yamas are nose sounds it says (VI. 29) that the non nasal mutes, before following nasals, become their own twins. The Yama is then stated (VI 32) to be similar to its original. There is an audible utterance (VI 33) in the mouth of the same quality with the Yama, but the office of the suffixed sound does not differ from that of its original (VI 34). Our treatise (pūrvagunaḥ) seems to follow RPr in this. The exact number of Yamas is yet unsettled, but they are generally believed to be twenty. For the terms kum khum etc cf Whitney CA I 99. As for the syllabication of the Yamas the TPr, XXI 8 declares them to belong to the succeeding syllable, while according to the

VPr. 1. 103 they belong to the preceding syllable. Both views were phonetically possible. For details cf. Siddheśvara, *Critical Studies in the Phonetic Observations of Indian Grammarians* pp. 79-81.

2-14 अथानुस्वारौ. अनुस्वार and अनुनासिक (=rakta 114) both are meant.

(a) Anusvāra is a nasal addition to the previous vowel, i.e. an āgama, (cf. 185 and Bhaṭṭoji on Pāṇini VIII. 3. 4), while Anunāsika is a nasalisation of that vowel, i.e. the raṅga. For Raṅga cp. S. Varma, *Critical Studies* etc. p. 150.

(b) RPr., VPr., TPr., Rt. and Pāṇini admit the existence of both the Anusvāra and Anunāsika, that is they acknowledge the existence of two different phenomena, i.e. (1) the nasal addition to the vowel and (2) the nasalisation of the vowel. The CA, on the other hand, admits only the latter. Cf. Whitney, CA. I 26; Macdonell, *Vedic Gr.* p. 53. Wackernagel, *Altind. Gr. I.* p. 256. The statement of S. Varma that Whitney's view about CA. is wrong, is unwarranted. His statement (*Critical Studies* p. 148) that Bhaṭṭoji regards Anusvāra as a pure nasalisation is also wrong. Cf. 'anusvārāgamah' Bhaṭṭoji on p. VIII. 3. 4.

Different theories about Anusvāra :—

There are three different theories about Anusvāra.

(1) Anusvāra is nothing but a pervading nasalisation of the preceding vowel. This is held by CA. (see Whitney on CA. I. 26) and partially by TPr. (cf. TPr. V. 31; V. 11; XV. 1; XXII. 14 with Whitney's note). That this was also the view of Siddhāntakumudikāra (S. Varma. p. 148) is wrong, because he expressly declares it as an āgama (=insertion of something extraneous and not as a mere nasalisation.

(2) Anusvāra is a nasal addition to the preceding vowel; it contains both the vocalic and consonantal elements or according to RPr. (1. 5, 22) Anusvāra is either a vowel or a consonant. Uvāṭa's explanation that it was equivalent to saying that Anusvāra was neither a vowel nor a consonant, though apparently negative is yet suggestive and may mean that it was a resonant vocalic nasal as Bergaign has put it. Cf. Wackernagel, *Altind. Gr. I.* p. 256 note.

The second view is held by RPr. 1. 22; VPr. IV. 148-149 (which gives detailed directions as to the quantity belonging to each element); TPr. (excepting the above-quoted sūtras) RT. 23, 185; Pāṇini and Bhaṭṭoji etc.

(3) The Anusvāra is entirely a consonant and is to be pronounced like half *g*. This is held by "certain phonetic treatises of the

Taittiriya school, the Vaidikābharaṇa, (on TPr. II. 30) the Śarvasammataśikṣā and the Yajurvedhūṣaṇa". S. Varma, p. 151.

In fact Anusvāra contained both the elements i. e. vocalic and consonantal (RPr. I. 5, 22). "During the period of preclassical and classical Sanskrit, the consonantal element of it was more predominant, while in Pāli and Prakrit the Anusvāra verged more towards the vocalic side." (S. Varma p. 154). In Sanskrit the scope of Anusvāra is very much limited, while in Pāli and Prakrit, it may stand before a vowel, consonant and even a pause.

For a comprehensive statement of the teachings about nasal sounds, see Roth, Lutt. und Gesch. des Veda pp. 64-82, for the difference between Anusvāra and Anunāsika cf. Bopp, Lehergeb. 352 f. Macdonell, Vedic Gr. p. 53, Wachernagel, Altind. Gr. I. p. 256; for the fact that there was no real difference between the actual pronunciation of Anusvāra and Anunāsika cf. Whitney, TPr. II. 30, JAOS. 10 p. LXXXVI f. for the three theories about Anusvāra, cf. S. Varma, Critical Studies. pp. 148-155; for the syllabication of Anusvāra see my note on RT. 23, for Raṅga cf. Weber, Ind. Stud. 4. 270, 9. 38, Kielhorn, Ind. Ant. 141. A.

- 2-15 ह्रस्व and दीर्घ अनु० is meant. Cf. YvŚ. 63 65, 134-142; PārŚ. 30 35. Read my statement on 2. 14

according to this. अनु. is a vowel as well as a consonant. Cf. RPr. I 5.

- 2-16 वर्ण इति पूर्वः कस्य. Cf. TPr. I. 16; VPr. I. 37 No other Prāśikhya proscribes this usage.

अध्वनमवारपूर्वात्. पूर्वदिकारात् (B) seems correct. Cf. akāro vyañjanānām. TPr. I. 21. which allows us to call a consonant not only as proscribed in 'varṇaḥ kārottaro' by a name formed by adding kāra with a interposed, but also by one formed with a alone.

- 3-1 रिति०. Read एकात् Cf. TPr. I. 19; VPr. I. 39.

सृष्टं वरणम्. Cf. CA. I. 29; RPr. XIII. 9.

दुस्पृष्टमन्तरायानाम्. RPr. XIII. 10 also calls it 'duspr̥ṣṭam' imperfectly in contact. See CA. I. 30 with Whitney's note.

- 3-2 विवृतं स्वरो. According to CA. I. 31 the position of the organ is neither very close nor very open. According to TPr. II. 44, 45 the spirants, in their order, are uttered in the positions of the mutes, but with the middle part of the producing organ opened. RPr. XIII. 12 declares the vowels, Anusvāra and the spirants, as produced without contact, and with the organ stationary. The class of spirants is composed of visarjanīya, jihvāmūlīya, upadhīmānīya and ś ś s h.

विवृततरमकारैः. Cf. CA. I. 34, 35, with Whitney's note.

3—3 संवृतो घोषवान्=voiced: that which is produced with the accompaniment of a laryngeal hum. अघोषः=unvoiced: that which is merely breathed. The thing is as follows. The vocal cards situated in the throat act in much the same manner as the lips of the mouth. They may be kept wide apart, they may be closed entirely, or they may be held closely together so that they vibrate, when air passes between them. When they are held wide apart (i. e. when the glottis is open) and air passes between them, the sound produced is called breath. But when they are kept nearer and air is forced between them, so that they vibrate, the sound generated is termed voice. Speech sounds contain either breath or voice. Those which contain breath are called breathed or voiceless sounds and those which contain voice are termed voiced sounds. (Daniel Jones, pp. 20-21.) Thus in the surd class it is mere breath, simple unintonated air, in the sonant class it is breath made sonant by the vocal cards on its passage through the throat and thus converted into sound. Cf. Śvāso ghoṣaṣvanupradānaḥ | Nādo ghoṣavat-svareṣu || CA. I. 12, 13. The same thing is stated in RPr. XIII. 4, 5. and TPr. II. 8, 10. The VPr. gives no corresponding definition. It does not use the term 'aghoṣa' and 'ghoṣavat' but adopts the arbitrary designations

jit and *mut* for the surds and *dhi* for the sonants. See VPr. I. 50, 53.

Anupradāna=anupradyate nena varṇaḥ (wherever with is given forth an articulate sound. नादानुप्रदानाः स्वरघोषवन्तः. Cf. TPr. (II. 8) which means that in vowels and sonant consonants, the emission is sound. It is the emitted material, whether tone, breath or the intermediate *h* sound. See RPr. XIII. 2; TPr. II. 9, CA. I. 12, 13.

स्वासोऽघोषायाम्. In surd consonants the emission is breath. cf. TPr. II. 10.

3—4 तनीयान् Cf. TPr. II. 11.

(a) तनीयान् प्रथमानाम् In simple surd mutes (i. e. *k*, *c*, *t*, *p*) the emission of breath is less. Cf. TPr. II. 11.

(b) उभौ हचतुर्थानाम्. Cf. Uvāta on RPr. XIII. 2, XIII. 6. See also TPr. II. 4-6, which mean that the *h* sound is produced in a method intermediate between closed and opened. These are the two Prātiśākhya which recognise a third kind of articulated material, besides tone and breath. RPr. XIII. 2 derives this material from a combination of the two others, rather than their mean. Whitney thinks that this distinction is forced and futile. Cf. his notes on CA. I. 13; TPr. II. 6.

(c) संनिवेशोऽन्यः. I have given the punctuation adopted by the mss.

But to make the sense of the passage clear we should punctuate: विष्टोऽघोपाणाम् । नादानुप्रदानाः स्वर-घोपवन्तः । श्वासोऽघोपाणाम् । तनीयान् प्रथमानाम् । उभौ हचतुर्थीनाम् । संनि-वेशोऽन्यः प्रत्याहारार्थः । यणोऽनु-यन्धो व्यञ्जनम् । याव० पराणाम् । उद्देश= showing letters in common order. उपदेश= showing them in a particular order.

3-5 यावत्तिथः—पराणाम्० Cf. Pāṇini I. 1. 71. But we do not find any pratyāhāra in Rktaṇtra. This shows that originally this प्रपाठक formed part of some ancient व्याकरण, but later on was adopted by the compilers of our text as an introduction to the text.

3-6-7 This was the order of letters adopted by आदिमजि and शाकटायन for their pratyāhāras. Note the difference between this order and that of पाणिनि and his followers. For a brief statement on the order of letters in the Prātiśākhya cf. पार्षदश्रुति on the first Sūtra of RPr. and M. D. Shastri. Int. to the RPr. p. 16.

3-10 अकारघोपाणाम्. Cf. आहुघोपं घोपव-तामकारमेकेऽनुस्वारमनुनासिकानाम् RPr. XIII. 15, which means that the voice in *g, j, ḍ, d, b* is due to the sound of *a*.

हकारस्तु घोपवताम्. Cf. घोपिणां घोपि-णैव RPr. XIII. 17, which means that *h* forms the second half of the voiced aspirates *i, e, gh, jh, ḍh, dh,*

bh. This is supported by the evidence of words like *hita* from $\sqrt{dhā}$ *jaghāna* from \sqrt{han} and *tad-dhi* for *tad+hi*. Similarly *jihvāmūlīya* and *upadhmānīya*, the two voiceless breathings are regarded to form the second half of the voiceless aspirates i.e. *lh* and *ph*. Cf. Macdonell, Vedic Gr. p. 50. 55, Whitney, TPr. II. 47.

3-11 Is not clear to me.

3-15 मद्रराशिः Cf. VPr. VIII. 15. पतञ्जलि 1. 1. 2: 132.

1 This rule is meant to cover all sorts of sandhis found in the SV. But here our treatise is making short shift of a subject which occupies long passages of other Prātiśākhya and has cost their authors a vast deal of labour. This is a clear admission of the unwillingness to cope with the intricacies of Vedic grammar. Let us now examine examples given by the commentator. सहर्षभाः Rule 85 is counteracted. अनापत्तिः requires सह ऋषभाः and B. actually reads सह ऋषभाः but cf. the comm. on 101. गो ऋजीकम् Pragghyasañjñā. Cf. RPr. II. 74. गव्यू-तिम्. Cf. गोयूती छन्दस्युपसंख्यानम् on Pāṇini VI. 1. 79. उपर्वुषः, सवर्दुघाम्, (sabās) do not come under 116. Cf. RPr. I. 80, 103; Benfey, SV. Einl. XLII. सन्नजम्. 183 is counteracted. Cf. RPr. IV. 23; Pāṇini VIII. 3. 25. ऋतीपहम्. Cf. 238; RPr. IX. 27, 28; Padap. ऋती । सहम् । (Benfey, SV. LX). तुविकृमिम्.

ह्रस्वाभावः. Cf. SV. II. 79. प्रतीव्यम्. (प्रति । व्यम्) cf. the comm. on 258. परीणसि. RPr. IX. 10; ऋतावृधः, तुम्रियावृधम् RPr. IX. 11. 23. ऋतावसो RPr. IX. 1. दूरात्. Padap. दुः । आत् on SV. I. 219. दूरे. Padap. दुः । ए, but see दूः । ए on SV. I. 53; Benfey, SV. lix. चर्षणीधृतम् is covered by 238 and is actually cited by the commentator. Cf. RPr. IX. 8. श्रुतकृत्. I do not know which sūtra is counteracted here. 247 is out of question, because *a* of श्रुत is not anudatta. दुष्प्वन्यम्. एत्त्व (213) is counteracted. षत्व is provided, because in the matter of षत्व and एत्त्व *dus* is not *upasarga*, cf. दुरः षत्वएत्त्वयोरुपसर्गत्वप्रतिषेधो वक्तव्यः on Pāṇini VIII. 4. 16, and so 279 is not applicable here. In the RV. षत्व is provided by RPr. V. 1, and एत्त्व is refused by V. 47. See also Pāṇini VIII. 3. 111. In परीणसि, दुरोणयुः, स्वर्णरम्, गिर्वणः, *n* is provided, because these are not *ekapada* like गिरीणाम् and so are not covered by 272. But this difficulty does not arise in RPr. V. 40 (ऋकाररेफकारा नकारं समानपदेऽवगृह्ये नमन्ति । अन्तःपदस्थमककारपूर्वा अपि संध्याः ॥). For प्रणेतः, परीणसि cf. RPr. V. 56. नृमणाः. Cf. Pāṇini VIII. 4. 26, for वृत्रहणा VIII. 4. 11. In गोषाता, अनुष्वधम् etc. षत्व is provided, because the same are not covered by 276–286. For गोषा cf.

Pāṇini VIII. 3. 108. सुष्टुतिम् is covered by 279, hence its mention is superfluous. Cf. RPr. V. 12; Pāṇini VIII. 3. 65. In चृषन्ना-चृषाता षत्व is provided. They are however covered by RPr. V. 1. For lengthening in चृषाहम् cf. RPr. IX. 47. आनुषक् seems superfluous. Cf. 279. इत् सुम् (=इत्सुम्तो) has nothing to do with षत्व and 'हविष्मद्भिः' in the fourth pāda is covered by 283. In पुरुष्टुत cerebralisation takes place. (Pāṇini VIII. 3. 65) In विष्टाः (RPr. V. 12), निषत्तम् (Pāṇini VIII. 3. 66), विष्क्, आनुष्टुभस्य, (VIII. 3. 65), विष्कभिते (VIII. 3. 77), सुष्टुतः, अतिषाहः (not covered by VIII. 3. 70) षत्व is provided. For नेष्टाम्. cf. RPr. V. 22. ऋतीषहम्. Cf. Pāṇini VIII. 3. 109. दिक्षु सदा 281 is counteracted. इन्द्राग्नी, इन्द्रपानः are not *ekapada*, hence their mention is superfluous. In इन्द्रपानः RPr. V. 43 counteracts V. 40. See also Pāṇini VIII. 4. 9–10. the mention of सोमसोमे, सुतेसुते, हृदिस्पृशम्, गोसखा seems superfluous, because they do not come under 276–286. For सोमसोमे सुतेसुते in the RV. cf. RPr. V. 28. गोसखा. Cf. गोषखा in RV. 8. 14. 1, but गोसखा in RV. V. 37. 4 cited by RPr. V. 27. हृदिस्पृशम्, पुरुस्पृहम्. Cf. RPr. V. 23 which counteracts V. 21.

2 Our commentator nowhere includes protracted vowels. The same sounds

are defined as *kanthya* by RPr. I 38, 39. CA I 19 The VPr. I 71 states them to be formed in *kantha* but by the middle of jaw as organ. The TPr. II, 46 declares only *h* and *visarjanīya* as produced by *kantha* and then says (II 47, 48) that some hold that *h* has the same position as the beginning of the following vowel, and *visarjanīya* has the same position as the end of the preceding vowel. This statement is noteworthy in as much as it is the peculiarity of the aspiration that it is an emission of unintonated breath through the same position of the mouth organs by which the following intonated sound is produced. This also hints at the phonetic value of the *visarjanīya*, showing it to be a mere uncharacterized breathing, a final *h*. Cf Whitney, TPr. II 47, CA I. 19.

- 3 Cf. RPr. I. 40 which notices that some call *h* and *visarjanīya* chest sounds. Cf. Pāṇinīya Śikṣā 16
- 4 It is peculiar that the commentary does not include *jihvāmūliya* in the list, while it names *upadhmaṇīya* in 9. The correct reading seems जिह्वामूलीया जिह्वामूलस्थाना CA I 20 includes *r* vowels, the guttural mutes, the *jihvāmūliya* spirant and the vowel *l*. The same are stated by RPr. I. 41 to constitute the class of *jihvamūliya*. The VPr states the same with the exception of *l* to be formed at the base of the tongue (I 65) by the base of the jaw (I 83). The TPr II,

35, 44 includes in the series only the guttural mutes and spirant, but reverses the relation of position and organ. As for the *l* vowel the VPr I. 69 and Pāṇinīya Śikṣā make it dental Cf. Macdonell, Vedic Gr. P. 25

ॠ ॡ The vowel *r* is pronounced as *ri* (Wackernagel, Altind. Gr. p. 31) and this pronunciation is old is shown by the confusion of the two sounds in inscriptions and mss. (Benfey, SV. Linl XLIV, Oertel, Synt. of Cases etc. I. P. 241) as well as the reproduction of *r* by *ri* in the Tibetan script. Macdonell, Vedic Gr. p. 8, Wackernagel, Altind. Gr. I p. 28. But *r* was originally pronounced as vocalic *r*. The RPr. XIII 34, VPr IV. 146, CA I 37, 71 describe it as containing *r* which according to the RPr. (XIII 34) is in the middle.

ॢ. Like *r* this vowel also was originally a vocalic *l*. For details see Bhattoji, Śabdakaustubha I 1. 2 62, Wackernagel, Altind. Gr. I p. 31

- 5 Our treatise does not include *ai* in the series, while other Pratiśakhya do Cf. CA. I. 21, RPr. I. 42. They are described by the VPr. (I 66) as formed upon the palate by the middle of the tongue. The TPr. II 36 makes the same definition of the *e* series and *ś*, but holds (II 40) that *y* is formed upon the palate by the middle and end of the tongue. TPr. does not include any vowel in the class

For the two distinct series of palatals and their detailed treatment see Macdonell, Vedic Gr. P. 26-34; Wackernagel, Altind. Gr. I. pp. 138-164. For the description of *e* diphthong see Mac. Vedic Gr. p. 9; Wackernagel, Altind. Gr. I. p. 35-39. For the meaning of diphthong and its pronunciation see Daniel Jones, An Outline of Eng. etc. pp. 57-59.

6 Cf. CA. 1. 22; RPr. 1. 43; TPr. 11. 37. 44; VPr. 1. 67, 78; and TPr. 11. 37. The cerebrals seem of Austric origin. Cf. A. C. Woolner's paper on it.

7 Cf. CA. 1. 24., VPr. 1. 69 adds (1, 1, 13) to the class which it defines (1. 76) as formed at the teeth by the tip of the tongue. According to RPr. 1. 44, 45 the class is composed of *l*, *s*, *r*, besides the *t* series and is called dantamūliya. The TPr. declares the same letters, except *r*, as formed dantamūleṣu, the *t* series and *s* by the tip of the tongue (11. 38, 44) and *l* by the middle of the tongue lip. II. 42. According to Whitney this description is more accurate, since the contact by which dentals are produced is not upon the teeth themselves, but just at their base or behind them. Cf. CA. 1. 24. Our treatise does not include *l* in the list. See also Macdonell, Vedic Gr. p. 35; Wackernagel, Altind. Gr. I pp. 177-179.

8 Cf. CA. 1. 28. and the commentary. Prātiśākhya are at variance with reference to this sound. The

RPr. 1. 45 declares *r* with other dentals as dantamūliya, but adds (1. 46) that some hold it to be *varṣya* gingival. The VPr. declares it as produced at the roots of the teeth (1. 68) by the tip of the tongue (1. 77); the TPr. 11. 41. by the tip and middle of the tongue at a point close behind the roots of the teeth. The Pāṇinīya Śikṣā (17) alone declares it to be mūrdhanya. Thus all the Prātiśākhya ignore its relationship with cerebral mutes and with *r*. But according to the euphonic system *r* is cerebral, and can hardly be supposed to have been uttered otherwise than with the tip of the tongue reverted into the dome of the palate, to the cerebral position. Cf. Whitney, CA. 1. 28.

9 CA. 1. 25, and RPr. I. 47 agree with our treatise. The VPr. 1. 70. also declares the same sounds as produced upon the lip (1. 70) and by the lip, but adds (1. 71) that in the utterance of *v* the tips of the teeth are employed. With reference to *v* the TPr. 11. 43 makes the same specification. For details see Whitney, CA. 1. 25. See Macdonell, Vedic Gr. p. 37; Wackernagel, Altind. Gr. I. pp. 181-184.

12 For Yamas see note on 2 and the important statement of Bhaṭṭoji in Śabdak. 1. 1. 4: 143. 144. By Anuśvāra our treatise takes both ह्रस्व and दीर्घ. The word nāsikya has not been satisfactorily explained by the commentators of the Prāti-

śakhyas, so much so that on RPr I 26 we do not even know the correct reading before 'इति नासिक्य' M D Shastri accepts the reading 'इति नासिक्य' and gives the following variants in footnotes —
 १ हु इति वा नासिक्य (२) ऊ इति नासिक्य (३) ँ इति नासिक्य (४) इति नासिक्य corrected to ङ ज ण न म इति नासिक्या The commentator of VPr does not explain the term on I 74 Not knowing the real meaning of नासिक्य the commentator of CA has committed a blunder on I 26

The real meaning of नासिक्य however seems to be the *insertion* (called *nasikya*) after *h* and before a following nasal Cf CA I 100 TPr XXI 14 The RPr I 48 and VPr I 74, 80 describe its mode of pronunciation and VIII 13 (हु इति नासिक्य) speaks of it again among the constituents of the spoken alphabet Our treatise (2 13) हुमित्यनुनासिक may there fore be emended to हु इति नासिक्य

For the difference between a *yama* and the *nasikya* of Whitney on CA I 100

RPr I 48 precisely agrees with our treatise The VPr I 74 describes the same sounds as produced in the nose and states (1 80) that their place and organ of production is the same adding further (I 82) that the *Yamas* are uttered with the root of the nose

13 Cf TPr I 27, VPr I 64

14 Cf TPr I 14, RPr I 12

16 Cf RPr 1, 13, CA I 10, VPr has nothing analogous and does not employ the terms *śosman* and *anusman* The term *usman* literally heat, hot vapour, steam, designates in the grammatical language all those sounds which are produced by a rush of unintonated breath through an open position of the mouth organs, or whose utterance has a certain similarity to the escape of steam through a pipe Cf Whitney, CA I 10

18 For corresponding rules cf RPr I 63, TPr XV 6 and Panini VIII 4 57 which closely resembles the rule of RPr and teaches the same thing by one Sutra for which our treatise has two (18 19) The same fact may be noted in Sutras 106 157 for which Panini has only one VI 1 132

The operation of the rule was perhaps general in *bhasa* as well as in the Veda But in classical Sanskrit it has since long become obsolete, though theoretically its existence has ever been admitted and Bhattoji actually turns the fifty four forms of *samśkārtā* into 108 by applying the rule (VIII

57) to them The phenomena is however common in Prakrit, particularly in Pali Cf Kuhn Beitrage 58 63, Muller, Jainpr 37

In Vedas this is often met with in *pluta* Cf *vindati* 3 m RV 10 146 1, *mama* 3 m TS 7 4 20, *vi*

veśā3 m VS. 23. 49; babbhūvā3 m. AV. 10. 2. 28; tapatī3 m. AB. 6. 35. 4.

In the RV. we find *a* and *ā* nasalised (RPr. II. 67) in words which are not in actual pause, but at a particular *virāma* in the *pāda* and occur invariably before a word beginning with a vowel (see note on 71). For details see Wackernagel, Altind. Gr. I. p. 302. The statement of Whitney that "the operation of the rule is confined to *pāda text* only" (TPr. XV. 6) is baseless and wrong.

- 19 The scope of this Sūtra is covered by RPr. I. 63 and TPr. XV. 6.
- 20 A consonant in pause belongs to the preceding vowel. The equivalent rules of the other treatises are RPr. XVIII. 33; TPr. XXI. 3; VPr. I. 101. The observation is on the whole sound. The final consonants in Sanskrit were implosive, so that they eventually disappeared in Pāli and Prakrit. With so much laxity in their articulation they were not likely to be independent syllables. Cf. Siddheśvara, Critical Studies etc. p. 63. It is to be noted that the treatment of syllabic division is meager in our treatise.
- 21 (a) The name *abhinidhāna* is applied to the mute which arises from doubling and is inserted before a mute. The author of Tribhāṣyaratna on TPr. XIV. 9 explains the word by *abhinidhāyate āropayate iti* which is set down against, and does not take notice of the doctrine of *abhi-*

nidhāna as a peculiar and imperfect utterance of certain letters in certain situations, which plays so prominent a part in the phonetic systems of the RPr. and CA. We may, however, bearing that doctrine in mind, conjecture with some plausibility that the word here not only signifies an *insertion*, but designates also a peculiar quality of the inserted letter. For the meaning of the word cf. Whitney TPr. XIV. 9; CA. I. 43; for a detailed discussion on *abhinidhāna* cf. S. Varma, Critical Studies, pp. 137-147.

(b) In words like *arkkam*, the consonant following the *r* or the *h* is doubled, and the former of the two, which is regarded as the one that owes its existence to the *krama* or duplication is to be reckoned as belonging to the preceding syllable. Cf. CA. I. 58; VPr. I. 104. The TPr. XXI. 5 teaches that a consonant not combined immediately with a vowel belongs to the preceding syllable. This would leave only the final member of any group to be attached to the following vowel. RPr. I. 26 is meant for a case in which the consonant following the *r* is itself succeeded by another. For details see Siddheśvara on syllabication of *r* plus double *plosive*. Critical Studies etc. pp. 69-71; Wackernagel, Altind. Gr. I. p. 278.

- 22 It is a general rule that the first member of a consonant group will

belong to the preceding vowel. Thus *muḷta* will be divided as *muḷ-ta* and not *mu-ḷta*. The fact that Sanskrit had predominant tendency to this syllabic division is shown by the doubling which the initials of Sanskrit consonant-groups undergo. The most general rule of doubling is that the first member of a consonant group, if preceded by a vowel, is doubled (RT. 269). For corresponding rules of other treatises see TPr. XXI. 4; CA. I. 56; VPr. I. 103; and RPr. XVIII. 35 and I. 25, which allows it to be counted either with the preceding or following syllable. For details see Whitney, CA. I. 56 and TPr. XXI. 4.

- 23 Cf. RPr. I. 25; XVIII. 34; CA. I. 53; TPr. XXI. 6. The question of the syllabication of the *anuvāra* is closely bound up with the question of its phonetic value, regarding which, however, there was no agreement among the ancient grammarians. Some held it to be a pervading nasalization of the preceding vowel; others, a nasal addition to the preceding vowel. The former view is adopted by CA. which acknowledges only nasal consonants and nasal vowels and entirely ignores any such constituent of the alphabet as the *anuvāra*. In this case the question of its syllabication was simple, the nasalized vowel itself forming a complete syllable as in *lakṣam*. The RPr. I. 5 and VPr.

declare *anuvāra* as nasal appendage to the vowel; the latter (VPr. IV. 147-8) gives directions as to the quantity belonging to each element. In this case, when the *anuvāra* was not a pure nasalized vowel, but contained in a more or less degree, a consonantal element, it was open to question whether it belonged to the preceding or the succeeding vowel; hence the necessity of the above rule, according to which the *anuvāra* belongs to the preceding vowel. The TPr. takes no distinct and consistent ground upon the question, whether the *anuvāra* consists in a nasalization of the vowel or in a nasal consonantal element following the vowel. It however takes prevailingly the view of the RPr. but lets the otherwise appear here and there. For instance in TPr. XXI. 6 *anuvāra* appears with the distinct value of a consonantal element following the vowel, but not as a full consonant. See also TPr. X. 11; XV. 1-3. Thus we have seen that, although the authors of the *Prāśākhya*s differed as to the phonetic value of the *anuvāra*, yet they were unanimous in declaring it to belong to the preceding vowel. For details of the syllabication of the *anuvāra* cf. Siddhesvara, Critical Studies etc. pp. 81-83. Our treatise differentiates between *anuvāra* and *raṅga* and obviously regards *anuvāra* as a consonantal element (see 185).

For the dual *anusvārau* cf.—

ह्रस्वादये भवेदीर्घो दीर्घादये भवेत्लघुः ।

संयोगे च परे ह्रस्वः सिंहासि निदर्शनम् ॥

अनुस्वारो द्विमात्रः स्याद्वर्णव्यञ्जनोदये ।

ह्रस्वो वा यदि वा दीर्घ देवानां हृदये तथा ॥

YajñavŚ. 63-65, I38-142; PārŚ. 30-35.

24 The first portion of the rule is included in 20. The negative here implies a direct reversal of 20. Cf.:-

यवौ तु रेफसंयुक्तौ रेफ आद्यो भवेद्यदि ।

पूर्वाङ्गं तद् विजानीयात्सूर्ये पूर्वे निदर्शनम् ॥

यवौ तु रेफसंयुक्तौ विरते च भवेद्यदि ।

पराङ्गं तद् विजानीयात्तरो ह्येते लक्षणम् ॥

25 The positive side of the rule is included in 20. It rather denotes a denial of adjunction of the second *sparsā* to the preceding vowel, and hence implies adjunction to the one that follows, since the consonant cannot stand by itself. Thus the division in *sakhyam* (*sakkhya*) would be *sak-khyam* and so on. Cf. TPr. XXI. 7.

26 Cf. RPr. 1. 23; CA. 1. 55; TPr. XXI. 2; VPr. 1. 100. This general rule is equivalently stated by all Prātiśākyas. The matter of syllabication seems of pretty pure theory. The only practical bearing it can have must be in determining whether such and such a consonant shall receive one or another accent, as being that of the preceding or of the following vowel. Cf. Whitney, CA. 1. 55.

27 Cf. RPr. 1. 37; CA. 1. 49; VPr. 1. 48. TPr. offers nothing corresponding.

28 RPr. I. 34; TPr. I. 37; VPr. I. 59, agree in assigning half a *mora* as the length of a consonant. CA. I. 60, however, assigns one *mora* as the length of a consonant. Our treatise makes an option between the two.

31-33 The idea underlying the grouping of sounds into short, long and ultra-long was said to be duration. Cf. P. Śikṣā 11. From the point of view of duration human speech was divided into three kinds: i. e. *quick*, *intermediate* and *slow*. (See RPr. XIII. 46. 49. TPr. XXIII. 20). The quantity of sound in *intermediate* speech was one third more than in *quick* speech, the ratio being 9 : 12; the quantity in *slow* speech was one third more than in *intermediate* speech, the ratio being 12 : 16. Cf. RPr. XIII. 48 with Uvaṭa's note. But authorities differ on the exact ratio of quantity between the three *ṛttis*. Thus while our treatise declares the proportion 3 : 4 : 5, Uvaṭa (RPr. XIII. 48) mentions some authorities holding the proportion 16 : 20 : 25.

Thus Kaiyaṭ on Patañjali 1. 1. 9: 517 says:—

द्रुतं श्लोकमृचं वोच्चारयति वक्त्रि
नाडिकाया यस्या नव पलानि स्रवन्ति
तस्या एव मध्यमायां वृत्तौ द्वादश पलानि
स्रवन्ति । नवानां त्रिभागस्त्रीणि पलाणि
तदधिकानि नव द्वादश संपद्यन्ते । विलम्बि-
तायां तु वृत्तौ षोडश पलानि स्रवन्ति ।

For the three *ṛttis* cf. Kātyāyana V. 4, 5 on Pāṇini I. 1. 70

and V 1—5 on Paṇini 1 4 109 with Patañjali on it For the conception of *vr̥tti* in modern phonetics see Sievers, *Phonetic* 639 p 231 For details see Wackernagel, *Altind Gr I* p, 280

Grammarians proscribed the use of these *vr̥ttis* under different conditions According to RPr, XIII 49, *quick* speech should be used in Vedic recitals, *intermediate* in business and *slow* during instruction

When the question of determining the standard of quantity arose the *intermediate* speech was selected as the basis, because presumably it represented ordinary conversation For details see Siddheśvara, *Critical Studies* etc p 172

- 34 The pause between two individual sounds had a duration of very infinitesimal time Cf Vyāsaśikṣa, 'vīramo varṇayor madhye pyanu kalopyaśamyute which attributes a quarter of a *mora* to the hiatus between two 'individual sounds Kalanirṇayaśikṣa contests this view Cf Siddheśvara, *Critical Studies*, etc p 186

Anu the minimum standard of quantity was called *anu*, which could not be perceived by the senses Cf 'indriyaviṣayo yosa vanurityucyate budhaiḥ Śambhuś The Lomaśśikṣa (ŚS 462) compares the *anu* to a particle reflecting the sun's rays *suryaśmī pratikṣa kanikā yatra dr̥syate* |

anostu tat pramanam syan matra tu caturanavat|| Next to

this comes *paramānu* which is just perceptible (cf Vyāsaśikṣā, 'mā trādhama yaktamatra kam') See also VPr I 61 (*paramānavardhamātra*) Next to *paramānu* comes *mātra*. The quantity of a *mora* was compared by Vyāsa śikṣa to a snap of finger, by the Nārada Ś to a twinkling of the eye by same authorities to a flash of lightning, and by the RPr to a note of the woodcock Cf S Varma, *Critical Studies* etc p 177

'Rgvīramah padavirāmo vivṛtti virāmah samānapadavivṛttivīramastrimātro dvimatra ekamātrordhamātra ityānupurvayena'|| TPr XXII 13 Cf also YvŚ 11, 12

- 37 (a) The *verse* pause is of three *moras*, that is, the quantity of the pause at the end of a verse is of three *moras* 'ubhā vajasya sātye huve van | Our treatise (37) seems to declare the quantity of this pause only two *moras*
- 36 (b) The *pada* pause is of two *moras*, of the pause of two *moras* in *Pada* text, between the *padas* the example is 'ise tvā, ūrje-tva'. Our treatise declares only one *mora* As for the *atagraha* pause it seems of two *moras* according to the TPr while RPr (I 28) and VPr (V 1) declare it to be of one *mora* This well accords with our treatise (36)
- 35 (c) Pause for hiatus is of one *mora* 'sa idhanah, ta enam, ta asmat' Our treatise (35) declares only half *mora* between the two vowels, be they short or long This accords with RPr II 4 which

prescribes half a *mora* for vivṛtti(= svarāntaram). Uvāṭa is more specific on this point. He says :—

‘tatrāyaṃ vivṛttervibhāgastrī-prakāraḥ | ubhayato hrasvā pāda-mātrākālā | pra-rbhubhyaḥ. (RV. 4. 33. 1) | ekato dīrghārdhamātrākālā | nū itthā (I. 132. 4) | ubhayato dīrghā pādonamātrākālā | tā im vardhanti (I. 155. 3) | But cf. the peculiar statement of Kaiyaṭa, 1. 1. 4: 201 which seems the basis of the following statement of Bhaṭṭoji—‘yattu prātiśākhyāntaramardhamātrovagrahaḥ iti tatttu sarvatra saṃhitāyāmardhamātrākālasya sattvāt tatotirikto’ rdhamātrākālo’ vagrahestityevamparamataḥ prātiśākhyayoravirodhaḥ’ Ś. Kaustubha 1. 1. 4: 139. He is wilfully overlooking here the sharp differences that existed between the Prātiśākhya, and in fact it was these differences that led to the composition of so many Prātiśākhya (= pratiśakhaṃ bhavam).

(d) Pause for hiatus in the interior of a word is of half *mora*. ‘pra-ugam’. The commentator quotes a couple of verses on TPr. XXII. 13 laying down four sub-divisions of the pause of hiatus, and assigning them different quantities: that between a short and long vowel is *vatsānusṛti*, and is one *mora* long; that between a long and following short is *vatsānusārīṇī*, of the same length; between two short vowels, ‘*pāka-vatī*, three quarters of a *mora*; between two long vowels, *pipīlikā*,

a quarter *mora* only. Compare it with Uvāṭa’s remarks on RPr. II. 4, quoted by Ś. Varma in Critical Studies, p. 186.

As regards the nature of hiatus, the commentary on Vyāsa śikṣā, ‘virāmaḥ tūṣṇīmabhūtaḥ kālaḥ syāt’, defines it as a ‘time of silence. But this goes against the Indian theory of continuity of sounds so strongly maintained by Patañjali (on P. 1. 4. 109) and others. Nor there is any proof to presume that the hiatus was accompanied by a glottal stop. By hiatus then the ancient grammarians may have meant a glide between one sound and another, and this is in a way confirmed by RPr. II. 4 which assigns only a quarter of a *mora* (time of a *svara-bhakti*) to the hiatus. For details see S. Varma, Critical Studies. pp. 185-187.

39 Bhakti = division of a *sāman*. See Lāṭy, VI. 1. 14; Drāhy. III. 4. 12; Simon PpS. 522.

The chants of a *sāman* are in a mode or modes, and, therefore, could only be sung in unison. At the sacrifices, the Sāma-veda priests whose business it is to perform the musical part, do not sing in unison except the *nidhana* or finale which consists usually of one, seldom of two syllables. The rest of the chant is divided into sections of which the first is :—

(I) Himkāra: the syllable *hum*, (which so often occurs in the *Sāman*, was called originally, as the Brāhmaṇas prove,

'himkāra' Bur. Ārṣejabr. In troduction XLVII) is sung by all priests (Sāyana, SV. p. 54) or by three singers (Sāyana on PVB. II. 1. 1.)

- (II) Prastāva It is sung by the Prastotr. It is dealt with in general part (PVB I. 3-13) and in a special one (1, 34-35).
- (III) Udgītha It is sung by Udgātr.
- (IV) Pratihāra. It is sung by Pratihartṛ. It is dealt with in general part (PVB. 1. 36-1 62) and in a special one (1, 63-2, 81).
- (V) Upadrava. It is sung by Udgatr.
- (VI) Nidhana or finale is sung by Prastotr, Udgātr and Pratihartṛ. For the various kinds of nidhanas see Sāy. on PVB. X. 10. 1. Nidhana is dealt with in a general part (PVB 2, 82-110) and in a special one (2 111-120).
- (VII) Pranava The syllable Om.

The real Bhaktis are five i.e. prastāva, udgītha, pratihāra, upadrava, and nidhana. For the theory of Bhakti according to the explanation in the Pañcavidha sūtra cf. The Vedic Chant pp 58-70 and Simon PpS 522. See also B. Faddegon, Ritualistic Dadaism, Acta Orientalia V. 1226. p 185

which makes u ū and ā 3 the standard of short, long and ultra long vowels. RPr. XIII 50 attempts to fix the length of the short, long and ultra long vowels by comparing them with the cries of certain birds, a fact implied in Pāpini 1. 2. 27. Cf. 'akṣkutarute akāra ekadvitṛimātratva prasiddh erakārādayonoktāh' Nāges' ŚŚ on this sūtra. The idea underlying the grouping of sounds into short, long and ultra long was supposed to be duration. Cf. ŚŚ. 379.

- 41 Svaritavinata It should be noted that the Gānas are not accented in the ordinary sense of the word, or like the other Vedas, but that the marks which form such a prominent feature in the text are actually musical notes.

They are seven and their names differ. Sāmavidhānabrāhmaṇa (I. 1 8 5) gives *Kruṣṭa*, *prathama*, *dvitīya*, *trītiya*, *caturtha*, *pañcama*, and *ṣaṣṭha* or *antya*. These correspond to the *ṣadja*, *ṛṣabha*, *gāndhāra*, *madhyama*, *pañcama*, *dhaivata* and *niṣāda* of usual Indian music, but in reverse order, i.e. the first note of the Hindu music is the fourth of the Sāma priests and the scale ascends the reverse of the scale of the last. In S. India the names of these Prakṛti Notes are *prathama*, *dvitīya*, *trītiya*, *caturtha*, *mandra* (5th, cf. Burnell's note in Arbr. XLIII) *anusvārya* (6th) and *atisvārya* (7th). Besides these there are seven others which indicate constantly

- 40 Cf. RPr I. 20, CA I 59, VPr. I. 55, 56, and TPr. I. 33 which makes r and l, the standard of a short vowel and Pānini 1. 2. 27

recurring groups of notes. These are :—

- (1) *Preṅkha*: which adds two *moras* to the preceding syllable and ends with the second *svara*. It is marked 2̄. For the conformity and discrepancy between the *Pūrvagāna* and the *Uttaragāna* with reference to the use of the sign 2̄, see *Vedic Chant*, pp. 44-47.

- (2) *Namana*: it consists of the first three notes (i.e., one, two and three).

'*praṇatam tat svaritacaturthādīmandrāntam*' (Comm. on *Shpbr.* II, p. 20) indicates that there is a difference between *namana* and *praṇata*.

- (3) *Karṣaṇa*: see note on 46.

- (4) *Vinata*: is marked by *vi* or *s* and consists of 1 and 2; where *Vinata* occurs in the *Grāma-geyagāna preṅkha* is put in the *Ūha*. For the significance of *vinata*, cf. *Vedic Chant* pp. 45-46; *Simon PpS.* 522.

- (5) *Atyutkrama*: 4565. This *vikṛti* is an embellishment.

- (6) *Samprasāraṇa*: 2345. This also is an embellishment.

- (7) *Abhigīta*: this consists in a repetition of the note with a short *a*; it appears to be marked in the *Bibliotheca Indica*, ed. by 7. See *Bur. Arbr.* XLLV.

Svarita: *mandrasvara*. Cf. *N.* on *PpS.* 1. 2 '*svaritaśabdēna man-*

drasvara ucyaṭe; on 8, 232 '*svaritasvarāntam* = *mandrasvarāntam*. But the Comm. on *Shpbr.* II p. 20. *vinatam tatsvaritacaturthādīmandrāntam* shows that *svarita* is the third. See also *Whitney* on *TPr.* XXIII, 16. For *vinata*, *praṇata*, and *abhigīta* see the comm. on *Shpbr.* II, p. 20 :—

Ārcikasamhitāyām sarvatrāvināmitāni punarapraṇāmitāni akṣarāṇi paṭhitāni, atra gānavidhau kvacit kvacidvināmitāni praṇāmitāni ca geyāni | vināmita śabdena vinatam praṇāmitaśabdena praṇatam | vinatam prathamādīdvitīyāntam praṇatam tat svaritacaturthādīmandrāntam | abhigītam dvitīyādiprathamāntam tathā vinatapraṇatayorante' rdhamātrā nicēna svareṇa bhavatyucce'pyardhā dīrghē hrasve'rdham||

(b) For the *Sāman* tones and sounds of animals see *NārŚ.* which connects the music with the sounds of animals. It runs :—

śaḍjaṃ vadati mayūro gāvo,

rambhanti cārṣabham |

ajāvike tu gāndhārau,

krauñco vadati madhyamam ||

puṣpasādhārāṇe kālē,

kokilā vakti pañcamam |

aśvastu dhaivatam vakti,

niṣādam vakti kuñjarah ||

ŚS. p. 407; also *Samgītaratnākara* 1. 3, 48. Here the author of the *Śikṣā* is perhaps analysing the microcosmos viz. the common sounds of animals, with the microcosmos viz. the tones of the human gamut. For details cf. *Simon*

PpS. Einl; S. Varma, Critical Studies, Chapter X (The Nature of Accent).

(c) Sāman tones and the accentuation of the spoken language.—

Burnell in the Introduction to his Arbr. (XLII) does not see any appreciable connection between the Sāman tones and the accent. Simon on the other hand, is inclined to believe that there was a clear connection between the two (PpS. 524). The Indian commentators put together the *svaras* of the Chandogas and the accent of the spoken word. Cf. Uvata on RPr. XIII, 44; the Comm. on PpS. 1, 2: *svaritaśabdēna mandra śvara ucyate*, on 8, 232 *svaritasvarāntam* = *mandrasvarāntam*, on 8, 232 *udāttaśābdēdhe svarah*. See also the four ślokas from Āryanyaka stobha quoted by Bur. in his Introduction to Shpbr. XIX. The Author of the Vedic Chant (39-41) has instituted a comparative study of (a) monomial stobhas consisting of two syllables (b) the polysyllabic monomial stobhas and (c) stobhas which consist of phrases, and has arrived at the conclusion that "there is in principle a connection between the word accent and melodic movement of the SV."

42 Cf. RPr. I, 27.

43 There is no discordance among the Prātiśākhya upon this point. Cf. RPr. I, 29, CA. I, 61; VPr. I, 57; TPr. I, 35. Ajātaśatru also declares two mātrās for dirgha.

44 Note the use of *vrddham*. Our treatise nowhere uses the term *pluta*. See RPr. I, 30; CA. I, 62; VPr. I, 58; TPr. I, 36. Ajātaśatru says that a *vrddha* syllable = 3 mātrās. For details see Bur. Shpbr. XX. In the chant there was an emphasis on *vrddha* syllable.

45 For *vaśvarya* cf. Vīrti on 53:—*'vaśvaryaṇi coccānīcāmśayorma-dhyo sphuta śabdādubhayasādhāraṇam na svarāntaram'* etc.

46 A vowel is a syllable. Cf. VPr. I, 99; RPr. XVIII, 32 which states explicitly that a vowel, whether pure or combined with *anuvāra* or combined with consonants, is a syllable. See also RPr. I, 19 that both the short and the long vowels are syllables. On the Vārtika '*varṇam vāṇiḥ pūrvasūtre*' Patañjali states '*athavā pūrvasūtre varṇasyākṣaramiti sañjñā kṛiyate*' MBh. 1. 1. 2 131. Kaiyata glosses it with *pūrvasūtre | vyākaranāntare* '*varṇā alṣarānīti*' *vacanāt*. *varṇā alṣarānī* is not found in RPr. XVIII, 32; VPr. I, 99; CA. I, 93 and our treatise 46. But we know from Bhaṭṭāra Harichandra that the Aindra grāmāra used the term *varṇa* instead of *alṣara* and that this grāmāra opened with the sūtra "*atha varṇasamūhah*." Cf. his Nyāsavyaṅkyā, Sūtrasthānam (Caraka, p. 58 just published) which runs,—

'*kāstreṣvapi 'atha varṇasamūhah'*
iti Aindra—*vyākaranasya | 'athāto*
dharmaṃ vyākhyāsyāmah' iti

Vaiṣeṣikadarśanasya ca' and so on. I suspect here that Kātyāyana, Patañjali, Kaiyaṭa and their followers are referring here to Aindra Vyākaraṇasūtra and we may not be very far from the mark if we assume that *pūrvāsūtre* here stands for *prathamāsūtre*.

Both the RPr. and the VPr. place this rule at the head of the rules for syllabication. Cf. Uvaṭa on RPr. I. 22:—

evam aṣṭau samānākṣarāṇi (1. 1) ityādinā varṇasamāmnāyamanukramya tataḥ 'sarvaḥ śeṣo vyañjanāni (1. 6) ityādinā vyañjanagatāḥ sañjñāḥ kṛtvā anantaram—ojaḥ-svarāṇām (1. 17) ityādinākṣaragatāḥ sañjñāḥ kṛtvā adhunākṣaravyañjanasamnikarṣe kim kasyāṅgamityetan-nirūpaṇāyāha 'anusvāro vyañjanam cākṣarāṅgam, iti|| Our treatise on the other hand has already shown the rules (see also CA. I. 55-58) for syllabication probably because it thinks that the difficulty about syllabication arises with regard to the consonants and *anusvāra* alone and not with regard to the *akṣaras* i. e. the vowels. One difference more in RPr. and our treatise. After defining *hrasva* by 1. 17 and *dirgha* by 1. 18 the RPr. defines *akṣara* and then states:—

gurūṇi dīrghāṇi, (20) tathetare-śām samyogānusvāraparāṇi yāni (21) | Note also the order in RPr. XVIII. 32-44. In this order the ultra-long vowels and ḷ are not

mentioned and hence they can only be implied as Uvaṭa does on RPr. I. 19. But our treatise does away with this difficulty by including the definition of *pluta* in 44. CA. 1. 93 (*svaro' kṣaram*) also does not serve the purpose of an introduction to the rules for syllabication, but according to Whitney may be regarded as a virtual precept that the accentuation, which in latter rules is taught (cf. Uvaṭa on RPr. I. 19 tantrāntare etc.), extends its sway over the whole syllable, or on the other hand, that the accents which are declared to belong to syllables, affect specially the vowels. This explanation of Whitney is not peculiar to CA. alone, but it applies to other Prātiśākhyaś as well. Cf. *ta ucyaṇte kṣarāśrayāḥ* RPr. 3. 1-2, (Uvaṭa on I. 19) and our treatise 46 which will just open the treatment of accentuation in (51) the 7th. daśaka, and this is hinted at by our Commentator who says:—

kṛte varṇopadeśa sāmānya (in the 1st. Prap.) prthaktvenā (40-45) kṣaraparibhāṣayā (46) nvartho dharmo' kṣarajñāne (omit virāma) akṣaraparimāṇasambandhāt. tatrogdghātanighātau and so on.

In akṣaraparimāṇa, parimāṇa = *kalā* cf. Whitney on TPr. XXIII. 2. *dvisvaraḥ parva*, the melody between the *danḍas* (a bar indicating *virāma* is called a *parvan*. The lengths of the *parvan* are widely divergent. Cf. the Comm. on Shpbr. II. p. 15 which runs:—

'yato gānavidhau kutracid
 okāḥṣarāvasānam, yathā—'agna ā
 yahi v' ityasyāmrei (1, 1) giya
 māno sāmni sāmārambho | dya-
 kṣarāvasānam parva yathā—'o-
 gnā : | tathā 'udutyaṃ jātaveda
 sam' (1, 31) ityasyām giyamāno
 sāmni 'jā' śabde okāḥṣarāvasānam
 parva | atraiva sāmārambho trya-
 kṣarāvasānam ca | and so on
 According to Burnell the bar of
 division (=parvan) marks the
 notes to be sung with one breath.
 For details see Vedic Chant pp.
 43-50.

Udghāta—uccibhāva. Cf 'mātrā
 lakṣane trividha udghāto
 'vyadāmat a u r c a u h o'
 prabhṛtini | vyadāto yā
 —i | matau huvā—i |
 reau ho |

Nighāta—sinking of a tone. 'ni
 hanyate nice bhavati'
 PpS X. 46, 'nihanyate
 mandrasvaram bhavati' ||
 Abhyudghāta is opposed
 to udghāta. Cf. Simon,
 PpS p. 520.

Pratyutkramah the moving for-
 ward of a note to a higher note,
pratyutkrāmat uccasvaro bhavati
 N on PpS. 5 74, *pratyutkrāntah*
ūrdhvam gatah VI 45 It is of
 eight kinds —

- 1 From the sixth to the fifth
 note $\overset{5}{rā} 6 5 6 n$
- 2 From fifth to the fourth :
 $\overset{5}{au} 4 rā.$
3. From fourth to the third
 $\overset{4}{ta} 3 m,$

- 4 From third to the second
 $\overset{3}{hī} 2 3 4 \overset{5}{ṣi}.$
5. From second to the first
 $\overset{2}{ho} 1 i | \overset{2r}{gno} \overset{1}{rā} |$
6. From fifth to the third
 $\overset{5r}{pā} | \overset{3r}{āvnā} \overset{2r}{|}$
- 7 From fifth to the second .
 $\overset{5}{prjā} \overset{2}{2}.$
- 8 From third to the first :
 $\overset{3}{punā} \overset{2}{3} 1.$

For details see Simon, PpS
 p. 521.

- (a) The numbers 1-6 indi-
 cate the pitches of a down-
 ward series of tones. The
 tones 1-3 are high com-
 pared with the tones 4-6.
- (b) Replacing the pitch 1 by
 2 in a melody is called
nīcatra (Simon, PpS. 614)
- (c) The numbers over the
 syllables are the *Prakṛti*
 tones i.e. the essential
 tones of the melody,
 those in the letters are
 the *Vikṛti tones* i.e. orna-
 mental tones
- (d) Where there is a group
 of notes and a number
 over each one, these up-
 per numbers give the
 length in matras, e.g.
 $\overset{1}{vā} \overset{1}{2} \overset{1}{3} \overset{1}{4} \overset{1}{5}.$
- (e) The length of the note
 depends on the vowel,
 and not on the length
 of the syllable according

to prosody; thus in *citra*
the first note is short.
The last note in each
parvan is always *vṛddha*.
Bur. Arbr. XLIV.

Abhigītā : 'dvitīyādih prathamāntyam | abhigīte ardhamātrā dvitīye prathamē adhyardhā | stomam rudrāya pinvo arkaiḥ (1.156) | stomam rudrā (ā abhi) | pā-invo (o abhi) | '

N. on PpS. 5. 32 and 281. See also the Comm. on Shpbr. (p. 20).

According to the above the *abhigīta* tone consists of two tones. It shows the union of the second tone with the first tone in the same syllable, of which the second tone is worth half a *mātrā*, the first tone having an additional half *mātrā* (*adhyardhā* = $1\frac{1}{2}$ Jñānendra on Pāṇini V. 1. 28; Bur. Shpbr. XIX). For details see Simon, PpS. 517, 592.

Vṛddhiḥ : emphasis. See note on 68.

Karṣaṇa : extending or prolonging down the scale. It is occasionally applied to the fifth note indicating that it is drawn or produced beyond the *mandra*. Cf.

'krṣyate karṣaṇam bhavati' N. on PpS. V. 810. This is either up the scale marked ∨ or down marked ∧ and includes all the notes between those marked. See Arbr. XLIII.

Karṣaṇa is of five kinds —

1. The *karṣaṇa* upto the second tone: $\overset{1}{bā}$ 2 rhiṣo.

2. The *karṣaṇa* upto the third tone: $\overset{2}{vā}$ 3.

3. The *karṣaṇa* upto the fourth: ā 2 3 4.

4. The *karṣaṇa* upto the fifth: $\overset{1}{śatā}$ śru 2 3 4 5 ta 6 5 6 1.

The Comm. on Shpbr. p. 19 runs:—

pañca svarāḥ karṣaṇalakṣitāḥ | karṣaṇalakṣaṇam Chandogapariśiṣṭe udāhṛtam | pañcavidham karṣaṇam ādvitīyakarṣaṇam ātrīyakarṣaṇam ācatrthakarṣaṇam āmandrakarṣaṇam mandraścātisvāryātkṛṣyata iti | ya eva svarāḥ prathamādārabhya (te) sa eva ātisvāryātkṛṣyate samyak svarāḥ | yathā vāsiṣṭhe (1. 269) śa tā śru 2 3 4 5 tā 6 5 6 1.

See also Simon, PpS. 519; Vedic Chant. p. 44.

Aṣṭākṣareṇa: the *Bṛhat* and *Ra-thantara* are cattle, (the first) eight syllables of the first verse he (the *Prastotr*) takes as *prastāva*. See note on 39. See Caland, PVB. p. 149.

Dvyākṣareṇa: the first two syllables of the last two verses he takes as *prastāva*. See Caland.

Daśākṣareṇa: they make (chant) in the middle a finale of ten syllables. For *nidhana* see note on 39. See Caland, PVB. p. 175.

47-48 Cf. RPr. XVIII. 32 and the note on 46.

49 Cf. RPr. XVIII. 38, 39.

50 Cf. RPr. XVIII. 41.

ACCENTUATION.

51 The subject of accentuation is treated in our treatise in a meagre way. What is given is just sufficient to construct the *Samhitā* from the *Paḍa text*. For a detailed treatment of the accentuation in *Sāman* cf. the first two *Prapāthkas* and the first six *Daśakas* of *Sāmātāntra*. In the following treatment of accentuation I have copiously drawn from Whitney. For the detailed treatment of the accentuation in the *SV.* cf. *Ṛktaṇtra-vivṛti*.

Our treatise does not define the three terms *udātta*, *anudātta* and *svarita*. The *CA.* I, 13, the *VPr.* I, 108, 109, *TPr.* I, 38, 39, and *Pāṇini* 1. 2, 29-30 precisely agree in their description of the *udātta* and *anudātta* accents; the *RPr.* III, 1 is more profound. As for the *svarita* they all virtually agree in spirit, though not in form: the *TPr.* I, 40 and *Pāṇini* 1. 2, 31 call it a *samāhāra*-combination of acute and grave; the *VPr.* I, 110 states that a syllable possessing both the other tones is *svarita*. The *RPr.* III, 2 says that a syllable is *svarita* into which the two other tones enter together, *CA.* I, 16 agrees with this definition. The three *Skt.* accents *udātta*, *anudātta* and *svarita* precisely correspond in phonetic character with acute, grave, and circumflex.

52 That is, when two simple vowels or a vowel and a diphthong, coalesce and form a single vowel or diphthong, in case either of the two was acute, the resulting syllable is acute. The rule is a general one and suffers exceptions which form the subject of rules (57-58), namely that *é* and *ó*, when they absorb a following *a* become *è* and *ò* and that *i i* become *ī*. The corresponding rules of the other treatises are *RP.* III 6; *VPr.* IV, 131; *TPr.* X, 10 and XI, 10; *CA.* 111, 66.

53 *Scarita* is nothing but a combination of *udātta* and *anudātta*, and its first half mora which is *udātta* is called *svarita*, the rest being *pracaya* of the *Chandogas*. Cf:—

अत ऊर्ध्वं प्रवक्ष्यामि ह्यधिकं तु स्वरत्रयम् ।
उदात्तश्चानुदात्तश्च तृतीयः प्रचयस्वरः ॥

NāradiŚ, I.

This will be clear from the following *Vivṛti* on *Ṛktaṇtra* which is available in parts only. It reads,—

अथाद्यार्धमात्राया एवोदात्तत्वं स्वरितं चाह “आद्यार्धमात्रा स्वरिति मिति” तस्य श्रुतिः । “आद्यार्धमात्रोत्संज्ञा भवति तत्स्वरितं नामेति” । वर्णस्यार्धमात्रा उत्संज्ञा भवति । उदित्यनुवर्तते उदात्तमुदिति-विधानात् । आद्यार्धमात्रा उदात्ता भवतीत्यर्थः । उदात्ताद्यार्धमात्रा स्वरितम् इति वचनात् आद्यार्धमात्रोदात्तांश एव स्वरितं नाम । नामशब्दस्य प्रसिद्धार्थत्वात् । यत् स्वरित-

For a partial correspondence, cf.
VPr. I. 126; TPr. I. 41; RPr. III.
4; CA. 1. 17; Pāṇini 1. 2. 32.
These treatises are unanimous in
declaring that the *ardhamātrā*
(=half a mora) of a *svarita* is
udātta, or to be more explicit,
the succeeding low tone starts

higher than even the preceding high accent, a phenomena, the like of which has been noted in Sechuana, an African language by Prof Daniel Jones (Sechuana Reader p 37) The wording of the rules is clear and the mention of *matra* makes it quite patent that the authors here imply only half a *mora* and not the half syllable But the commentators on these treatises have tried to explain *ardha matra* by half the syllable (1 0 in short *svarita* $\frac{1}{2}$ *mora* is *udatta* and $\frac{1}{2}$ *anudatta*, in long 1 *mora* *udatta* and 1 *anudatta*, in ultra-long $1\frac{1}{2}$ *mora* *udatta* and $1\frac{1}{2}$ *anudatta*) Now, if the authors of the corresponding rules really intended to convey the sense, these commentators put upon them, we would have had *āditordhamudattam* instead of *matrārdhamudattam* in CA, *svarārdham* instead of *svarardhamatram* in VPr, *yāadardham* instead of *yāadardham hrasvaya* in TPr and above all Panini who believed in —

*ardhamatralāghavena putrotsa
vam manyante vaṛyakarāṇaḥ* would never have used the word 'hrasvam' in 1 2 32 (cf Pat 'ardhahrasva śabdo' rdhamatrarūdhaḥ', and Harī —

'pramanameva hrasvada,
vanupattam pratīyate' |

VakyaP II 309 10)

—where Kaśīkakara (cf 1 2 32) and Bhaṭṭojī (cf SK, Manorama, and ŚabdaK on 1 2 32) following

the commentators on Pratiśākyas assert that in Panini 1 2 32, the word *hrasva* is redundant and *ardha-hrasva* means half the syllable

RPr III 4 'tasyodattatarodattadardhamatrarardhameva va' clearly lays down an option between half a *mora* and the half of a syllable, but even so clear a construction as this, has been wilfully mishandled by no less an authority than Bhaṭṭojī who following his own Śākhā says 'ardham veti dirghābhī prīyam' and the ŚR glosses it with 'etau pakṣau vaikalpikāvityapāsataḥ | va sabdastu pādapuranāyeti bodhyam' | But this is simply absurd will be shown by a quotation from Svarastaka, a ms work in the Library of Mysore (1024) which confirms the fact of option between the two views It runs —

svaritasyaiva purvardha,

mapare tu maṇiṣinaḥ |

abhiṣvāryaiva purvardham,

niyacchantyeva compitam ||

and so on For a similar farfetched statement of Kāyāta and Bhaṭṭojī cf my note on 35

In fact, these niceties seem to have been a matter of pretty pure theory, and there were certain Śākhās (cf Vajasaneyi) who took the half of the *svarita* syllable as *udatta* and the other half as *anudatta* but this view is not supported by the wording of the Pratiśākyas

For the observation that the

first half mora of the svarita was higher than the high accent, cf. S. Varma, Critical Studies pp. 161-162 ; for a detailed discussion on the relation of accent with musical notes, cf. Burnell, Arbr. XLI-XLVIII.

- 55 This is the rule prescribing the *enclitic svarita* i. e. a svarita arising in an unaccented syllable which is preceded by an acute, and not again immediately followed by an acute or circumflex. The RPr. III. 9, 10, and CA. III. 62-63 subdivide the enclitic circumflex into two forms: the *tairovyāñjana*, where the circumflexed syllable is separated from the acute by one or more consonants and the *pāḍavṛtta* (the RPr. calls it *vaiṛvṛtta*) where a hiatus intervenes. The VPr. I. 117-119 and the TPr. XX. 6, 7 teach the same thing. But the former distinguishes under the *tairovyāñjana* a subform *tairovirāma* (having a pause between) as occurring when the acute is parted from its enclitic circumflex not only by consonants but by the *avagraha*, or pause which separates the two parts of a compound word. Thus in *prajāvat* the enclitic accent of *vat* would be the *tairovirāma*, while in *prājanām* that of *nām* would be the *tairovyāñjana* simply. The *tairovirāma*, then would occur only in the *Pada text*. The TPr. does not note this pada-accent, but allows the name *tairovyāñjana* only to a circumflex which follows

an acute in the same word : if the acute syllable is a final, and the circumflex an initial, the latter is to be denominated *pratihata* XX. 3 : thus in *tatra*, the enclitic svarita of *tra* would be *tairovyāñjana*, in *tat te* that of *te* would be *pratihata*. The practical importance of these numerous subdivisions of an enclitic accent seem of little importance and our treatise does not notice them. But Nāradaśikṣā agrees with VPr. when it states :—

udāttapūrvam yatkiñcit,
chandasi svaritaṃ bhavet |
eṣa sarvabahuśvāras,
tairovyāñjanamucyate ||
avagrahāt paraṃ yatra,
svaritaṃ syādanantaram |
tirovirāmaṃ taṃ vidyāt,
udātto yadyavagrahaḥ ||
svare cet svaritaṃ yatra,
vivṛtā yatra sanhitā |
etat pādāntavṛttasya,
lakṣaṇaṃ śāstracoditaṃ ||

- 56 This svarita is called *kṣaipra*. The term comes from *kṣipra* “quick, hasty” and marks the sandhi as one in which there is a gain of time, or a hastened, abbreviated utterance of the semivocalized vowel. All the treatises viz. RPr. III. 7; VPr. IV. 47; TPr. X. 16; CA. III. 58 state that in such a case, when the former element of the compound is acute and the latter grave, the resulting syllable is circumflex, and all-RPr. III. 10; VPr. I. 115; TPr. XX. 1. CA.

III 58—apply to the circumflex, thus arising, the name of the combination, *ksaipra* Naradasikṣā also teaches the same thing It runs —

1 u varnau yadodattau,
apadyete yavau kvacit |
anudatte pratyaye nityam,
vidyat ksaiprasya laksanam ||

The *jatya svarita* precisely corresponds in origin and in quality with the *ksaipra* "The meaning of the term *jatya* is natural, original, primitive The circumflex syllables to which it is applied are those which have that accent in their own right and always independently of the combinations of the sentence' (Whitney) It is distinct from the enclitic, in as much as it is preceded by an unaccented vowel or having no predecessor, while the former invariably succeeds an acute This arises from the accented *i* or *u* after a conjunction of consonants ending with *y* or *v*, 'that is to say, no syllable in Sanskrit has an independent circumflex accent except as it results from the conversion of an original accented *i* or *u*, short or long, into its corresponding semi-vowel *y* or *v* before a following dissimilar vowel' Whitney

Thus *kanyā* represents an earlier *kanīa*, *svār* an earlier *su ar* and the like The *jatya svarita* then corresponds in origin and in quality with the *ksaipra* and differs from it only in period, arising in connection with the combination

of syllables into words, rather than of words into a sentence For the definition of *jatya svarita*, cf RPr III 4, VPr I-111, TPr XX 2, CA III 57 and Naradasikṣā which reads —

sayakaram savam vapi,
aksaram svaritam bhavet |
na codattam purastasya,
jatyasvarah sa ucyate ||

See TPr, XX 2, which reads —
"sayakaravakaram tvakṣaram ya
tra svaryate sthite pade' nudatta
purve' purve va nitya ityeva janī
yāt

57 This is *praśliṣṭa* or *praśleṣas varita* The RPr II 7 gives this name to all those cases of combination in which two vowels, or a vowel and diphthong, are combined together into a single vowel or diphthong A *svarita* accent arising in connection with such a combination is, by all the other treatises, called *praśliṣṭa* The RPr III 8 says that a single teacher Māṇḍuka held that the *praśliṣṭa svarita* arose in all cases of a *praśleṣa* combination, where the former element was acute and the latter grave, and it is well known that the Śatapathabr follows this rule of accentuation throughout Panini VIII 2 6 also permits it, whenever the unaccented latter element is the initial of a word But this *svarita* is not at all of so frequent an occurrence as the general acceptance of this rule would show it to be, because all the *Pratīśāhnyas*

agree in prescribing that a combination into which enters an udātta vowel is itself udātta (see 53), the acute element raising the grave to its own pitch. All however allow the exception which forms the subject of the rule (58) and all but the TPr. allow also that, which is treated in this precept. Cf. Nāradaśikṣā:—

ikāraṃ yatra paśyeyuḥ,
ikāreṇaiva saṃyutam |
udāttamanudāttena,
praśliṣṭaṃ taṃ nibhodhata ||

If the vowel *ī* and *i*, both short, are fused together into a long vowel, this vowel has the praśliṣṭa svarita. The illustrations cited by the commentator accord to this. For further discussion on the subject, see Whitney, CA. III. 56.

58 'udāttamāpadyate' does obviously mean *svaritamāpadyate*. Svarita is implied, because there is no mention of udātta in the previous sūtra. Cf. note on 53.

This is an *abhinihita* svarita. The RPr. II. 13 calls the absorption of initial *a* into preceding final *e* and *o* the *abhinihita* sandhi, while the VPr. I. 114 and CA. III. 55 apply this title to the resulting circumflex. The TPr. XX. 4 has for the same accent, the slightly different name *abhinihata*.

The VPr. IV. 59 and TPr. XII. 9 give rules for the occurrence of the *abhinihita* circumflex in connection with those for the absorption of initial *a*, and define and name the accent in l. 114.

and XX. 4 respectively, when treating the general subject of accent. The RPr. deals with both matters together, first prescribing the *svarita* in III. 7, and then giving it its distinctive appellation in III. 10. The Nāradaśikṣā defines *abhinihita* thus:—

e-o-ābhyāmudāttābhyām,
akāro nihitaśca yaḥ |
akāraṃ yatra lumpanti,
tamabhinihitam viduḥ ||

60 In the commentary read 'uccānuccasandhiṣūcca eva kāryaḥ'.

61 A grave following a circumflex has the tone of acute. All the other treatises RPr. III. 11; VPr. IV. 138; 139; TPr. XXI. 10; CA. III. 71 lay down the same principle, saying also distinctly what must be taken as implied in our sūtra (and the CA. III. 71) that not only the single grave syllable which immediately follows the circumflex receives the acute utterance, but those also, which may succeed it, until the proximity of an acute or circumflex (a rule not stated in our treatise, but occurring in every other treatise; cf. RPr. III. 12; VPr. IV. 140; TPr. XXI. 11; CA. III. 74) causes the voice to sink to the proper anudātta tone. The RPr. and TPr. use the term *pracaya* = accumulation, indefinitely extended number or series" in describing this accent.

It may be interesting here to note the rule of rise and fall of the voice in connection with the consecution of the accents, a sub-

ject fully treated by all other Prātisākhya except that of ours. A syllable may be uttered in the three tones i.e. anudātta, the low or grave which belongs to an unaccented syllable, udātta, the high or acute, which is the proper tone of an accented syllable, and the svarita, circumflex, which combines in it a higher and a lower pitch within the limits of the same syllable, and always results, as an independent accent, from the fusion of two originally separate elements, of which the one was acute and the other grave. A great complication however arises by the rule that an originally grave syllable, when it follows an acute, receives an enclitic circumflex. that is to say, the voice, when once raised to the pitch of acute, does not ordinarily come down with a leap to the level of the grave, but makes its descent in the course of the next following syllable. We should

thus say *a mi tran*. To this there is an exception, that the syllable which would otherwise receive an enclitic svarita remains grave, if an acute or circumflex comes next after it, the theory being that the voice prepares itself for rising to the acute pitch by sinking before it. Cf. RPr. III 9, VPr. IV. 135, TPr. XIV. 31, CA III. 70

There is yet another complication, and it is this that the unaccented syllables which follow a circumflex, although grave in value,

are yet pronounced at the pitch of acute. This grave accent with the tone of acute is called *pracaya*-accumulation Cf. RPr. III. 11, TPr. XXI 10. Now the RPr. III. 23 declares that the first portion of a circumflex should be uttered not at acute pitch, but with a yet higher tone, and its latter portion at acute pitch. Cf. TPr. I. 41-42 also. This being the case, it is quite natural to suppose that the following grave syllables should run on at the same level, i.e. the acute pitch. But the grave, which next precedes an acute or circumflex is not of acute tone, but maintains its original character. Cf. RPr. III. 12, VPr. IV. 140, TPr. XXI. 11, CA III 74. This is in brief the way of the rise and fall of the tone in the pronunciation of the consecutive accents. For details see Whitney, CA. III. 65

63 In *Pada text* each word stands separate, and a Prātisākhya gives rules for its conversion into the euphonically combined text. According to this precept the *pada text* seems fundamental and may be taken as the foundation of the Samhitā text. Cf. RPr. II 1, TPr. V 2, Yaska, Nir. 1. 6, 1.

64 Euphonic alteration takes place in the *padas*

66 Cf. Pāṇini II 4 71 In the comm. put a fullstop after 'gāpasamāsaḥ' instead of after *iti*. With regard to the *gāpa*, cf. 'dadhiḥpayaādi gāna' on Pāṇini II. 4 14. which runs. 'brahmaprajāpati, śivavaiśṛavanau'

(vaiśvānarau Bur.), skandaviśākhau, parivrāṭkausīkau etc. See note on 128. In the comm. put a full-stop after 'bahuvacanam.' For 'kaundinya' cf. Pāṇini II. 4. 70, and for the plural in *vanaspati*, cf. P. II. 4. 12. In the sentence compound 'vyapekṣā sāmārthya' is implied.

- 67 Aitareya Āraṇyaka III. 1. 5 gives three definitions of Saṃhitā: (1) Saṃhitā is the interval between two syllables. This is indefinite, because it does not show the nature of interval and it suggests that the syllables in juxtaposition were independent units. (2) Saṃhitā is the interval by which the accent or the quantity of two syllables is distinguished. This includes accent and quantity and is a more satisfactory definition. (3) Saṃhitā is a pronunciation of two syllables which are neither entirely separated nor united. This suggests a sound view of syllabication and is practically correct. See S. Varma, Critical Studies. p. 108. See Yāska, Nir. 1. 6. 1; TPr. XXIV. 1-4; Pāṇini 1. 4. 109 with Patañjali (= paraḥ prakṛṣṭo yaḥ saṃnikarṣaḥ saṃśleṣaḥ parasparaṇa svarānāṃ svarārūdhānāṃ vyañjanānāṃ sā saṃhitā =) the union of separate words in euphonic combination. The second Prapāṭhaka (note that the first is a later addition) of our treatise, coupled with the first six rules of the third, has disposed of all matters of general

phonetic theory, and laid down such rules as apply to words in their independent form, and it now enters upon what is the chief function of a Prātiśākhya i.e. the registering of those changes, which occur when the padas of disjoined text are put together in the form of Saṃhitā. This rule is an *adhikāra* applied to all what follows in the succeeding chapters. Other treatises have equivalent headings; cf. RPr. II. 1; VPr. III. 1; TPr. V. 1; CA. II. 1.

- 68 (a) Cf. Pāṇini VI. 1. 125. The commentator cites *miṇā avyam*, *bharā indra*, *dhārayā āpaḥ* as examples, but in all these we find sandhi in the SV. of Benfey; JS. of Caland and the text of Stevenson, and the commentator himself gives *dhārayāpaḥ* as a counterexample on 71. Moreover, we find examples, where the *pluta* undergoes euphonic alteration; cf. *tvā 3 sya I. 129, 165, II. 271; kvā 3 sya I. 142; tvā 3 dya I. 295*. In five situations the *a* standing at the beginning of a pāda is elided after a *pluta* vowel. Cf. *vr̥dhe 3' smān I. 239; II. 769* (JS. has *vr̥dhe 3 asmān*); *gr̥ṇāno 3' bhi. II. 774; gr̥he 3' mṛtam II. 1195; ayudhyo 3' smākam II. 1208; hito 3' bhi. II. 279*. Sandhi takes place when *apluta* is followed by a *pluta*, cf. *apsvā 3 ntarā I. 512; abhyr̥ 3 tasya I. 556; āyatyū 3 chantī II. 101; hyā 3 űga II. 288, 860; abhyā 3 r̥ṣan II. 408; devatyā 3 madam*

II. 508, śagdhū 3 ṣu II. 927, śargdhū 3 graḍhanā II 1204. The exact ken of this sūtra may therefore be found somewhere else.

(b) *Dirghatva* and *vrddhi* syllables with a short vowel count for a short tone, those with a long vowel count for a long tone. For the sake of musical composition short vowels are often lengthened. Sometimes a long vowel is replaced by a short vowel Cf PpS. VI 70-108. Besides the short and long tones there are the increased or emphasized tones, the *vrddhas*. According to Burnell the last note of a *parvan* is always emphasized and, in fact, there is always found a lengthening of vowel or *āyibhāva* (*āyibhāva* or *āibhāva* is the change from *i*, *ī* or *e* into *āyī* or *āī*, in the same way there is *ārbhāva* with the change from *r* into *ār* PpS. VI 109-152) o g SV 1 1 ^{3 1 2} *vītāyo* changes into ¹ *vī*-² *itoyā* ² *ī* Which syllables undergo this kind of *vrddhi* is taught in PpS V 1-118, and herein perhaps lies the solution of the difficulty mentioned above. In *itoyā* ² *ī* sandhi does not take place, because the *ā* of *itoyā* is *vrddha* = emphasized, lengthened. There is no special notation for *vrddha*.

The sign *r* over the syllable means a *dirgha* syllable, which according to Burnell is 'prolonged beyond the usual length, but apparently does not lose its character

of a long syllable. The *dirgha* can be clearly distinguished from the *vrddha* syllable. For details, see Vedic Chant p. 43. For *vrddha* in 44 cf. Lomaśi śikṣā in ŚS. p. 456 and S Varma. Critical Studies p. 180.

69 Cf RPr II 56, VPr. IV. 87, TPr. IX 16, 17, CA III. 36, Pānini I. 1. 14

70 Cf RPr. I 70, VPr. I. 94, CA. I 80, Pānini I. 1 15, Macdonell, Vedic Gr. p. 67, Wackernagel, Altind. Gr I. p. 326 note

71 Cf RPr II 61 with Uvaṭa on it. The commentator cites here 'kādā vaso stotram haryata ā āva' I. 228. as an example. But we read in RV 10. 105. 1 *haryata āva* noted by Uvaṭa on RPr. II 74. Add to the list of examples 'carhṣadā upo nu I. 196 (wanting in RV.), sacī udjat II. 102 noted by RPr. II 60. But our treatise does not seem to cover *pibā imam* I. 191 where *ā* does not stand at the beginning of a *pāda*, but cf. 253, in which *bā-1* is expressly given. *śraddhā* it RV 7. 32 14 has been noted by RPr II. 59, but the same stanza occurs in SV. with *śraddhā* *hi* to I 280. Note also *joṣamā indra* II 1140 registered by RPr II. 61. RPr. II. 66 provides for *evā agnīm* RV. 5 6. 10. In the SV. we find sandhi in such situations. Cf *oṣāmṣṭāya* II. 716. Other examples noted by RPr II. 68-66 are not found in our *Samhitā* and hence they are not noted by the commentator. RPr. II 67,

Pāṇini VI. 1. 126 prescribe nasalisation for such uncontracted ā, but this is singularly absent in our Saṃhitā. Hiatus without nasalisation is seen in TS. III. 1. 11. 5 and MS. I. 4. 12: 60. 14. Cf. Wackernagel, Altind. Gr. I. p. 315; Oldenberg, RV. I. 469.

72 This is an exception to 69. For a corresponding rule, cf. Pāṇini VIII. 3. 33. In the comm. read *kiṃ vāvapanam*, cf. Böhtlingk on P. VIII. 3. 33.

73 Exception to 74.

74 For corresponding rules cf. RPr. I. 71 (*rodasīme* RV. 7. 82. 2 noted by RPr. II. 72 is not noted by RT.); Vpr. I. 93; CA. I. 75, 76; TPr. IV. 11, 15; Pāṇini 1. 1. 11. The dual *ī* or *ū* never change to *y* or *v* nor is the former ever prosodically shortened, though the latter sometimes is. The dual *ī* may remain even before *i*, e. g. *harī iva*, but the contraction is written in *upadhīva* etc. noted in 75. Cf. Macdonell, Vedic Gr. p. 65; Wackernagel, Altind. Gr. I. p. 321. But there is no provision for *somo gaurī adhi śritaḥ* SV. II. 546 in our treatise, while others note it, cf. RPr. I. 72; CA. I. 74; Pāṇini 1. 1. 19.

In TPr. IV. 1 the term *pragraha* = separated, implies that the vowel so designated is exempt from *sandhi*, while other treatises find it necessary to teach by a specific rule that the vowels declared to be *pragrhya* are not subject to euphonic alteration. Cf. RPr. II. 51; VPr.

IV. 87; CA. III. 33; Pāṇini VI. 1. 125. Our treatise does not even mention the term *pragrhya* and declares that such and such vowels do not undergo *sandhi*.

75 *Upadhīva* and *pradhīva* are not found in SV. but are met with in RV. 2. 39. 4. *Dampatīva* occurs in RV. 2. 39. 2. Clearly the rule is a later addition to our treatise. For corresponding rules cf. RPr. II. 55, 72. Pāṇini does not provide for such cases, while the *Vṛttikāra* does; cf. *Kāśikā* on Pāṇini 1. 1. 11, but he has been refuted by Kaiyaṭa who forms these examples not with *iva* but with *va*, the by-form of *iva*. Cf. Kaiyaṭa on *Paṭasjāli* 1. 1. 11; Bhaṭṭoji, *ŚabdaK.* on Pāṇini 1. 1. 11; and Jñānendra on SK. Acsandhi; Macdonell, Vedic Gr. p. 65. n 12; 66. n. 9.

76 In the *sūtra* *ayavāve* = *a + e + o + au + e* (= locative of *a*). *Nyūne* = *antaḥ pādam*. Cf. RPr. II 35; Pāṇini VI. 1. 114. The word also implies that *sandhi* is negated in those situations only, where the metre requires retention of *a*; in other places the *a* is elided, though it may stand in the middle of a *pāda*. Cf. *pādo' syehābhavat* ArS. 34 : *pādo' sya* 35. This clearly confirms the view of Whitney who says "if there is any rule or system of rules, determining the very various phenomena—which I cannot but seriously doubt—I have been unable to discover any trace of it" CA. III. 54. In the commentary

navapare is brought down from 75 Cf Panini *avyaparo* VI 1 114, RPr 'yakaradyakṣaram param vakārādyapi ā bhavot' II, 35, VPr IV 73, though in another sense, of course RPr II 49 prescribes *praṅghyasañjñā*, and of all the examples cited on it SV has only one 'parāvato atho' SV II 252-RV 9 39 5 On RPr II 50, *pāntamā voandhasah* RV 8 92 1 tallies with SV I 165=II 63 Compare also VPr IV 82 84, CA. III 54, Panini VI 1 115, Benfey, SV Enl XXXI

In the commentary 'trirahrān tagrahanāt' means trih—i.e. such examples are only three (a) *śāso avratam*, only once in I 298 (b) *śāso avyo* (twice, I 529, 532, in II 601 529 is repeated) See note on 280 'Akrānta grahanāt may mean, *v* not joined with consonants that make it liable to *krama* =doubling (i.e. *y, r*) the *a* of *avyo*, and *avratam* is therefore not elided

CA prescribe only two rules II 53, 54, with regard to this sandhi and thus make short shift of a subject which occupies long passages of the other *Pratīśākhya*s (cf RPr II 35 50, VPr IV 61 85, TPr XI 1—XII, 8, Panini VI 1 115-121) and has cost their authors a vast deal of labour According to Whitney there is not in the whole work another so discreditable confession of unwillingness or inability to cope with the difficulties of an intricate subject For details about this sandhi in AV cf

Whitney, CA III 54

79 Cf *go agrayā* RV 9 71 8 In the commentary we may read *go aśvam | go ajinam | go ajinikam |* Read *ajinikam* in 80-81

80 The scope of 79 80, and 81 is covered by one sūtra of Panini, cf VI 1 122 Note its bearing on the age of our treatise

81 According to Patañjali and other commentators Panini has not recorded *gavaśvam* etc He on the other hand prescribes (VI 1 123) *avan ādeśa*, thereby forming *gavā gram*, *gavājnam* etc The original sandhi of the compound *go agra* must have been *gava_ora* Cf Wackernagel, Altind Gr I p 325, Macdonell, Vedic Gr p 66 n 7

82 The exact scope of this sūtra is not known Two explanations may be offered (a) Sandhi does not take place if *te* is followed by *a* as in *te a_ono* I 38 But as this is covered by 74 the commentator seems to take the sūtra 'niyamārtham' i.e. *a* is not elided after *te* alone, and that it may be omitted after *te* etc, as is done in *yajātam te 'nyat* I 75 etc But in SV we invariably find the retention of *a* after this *te* and there are a host of other examples where *a* is not elided after *te, tre* etc Cf I, 53 58, 230, 279 324, 419, 439, 529, 531, 533, 547, II 75, 85, 88, 89, 100, 103, 108, 173, 181, 222, 836, 237 252, 262, 365, 367, 370, 372, 373, 439, 587, 601, 612 627, 629, 640 974, 996 998 1094, 1095, 1169

It may be argued here on the authority of Patañjali (=nanu ca bhośchandogānām sātyamugrirāṇāyanīyā ardhamekāramardhamokāram cādhiyate sujāte eśvasūnṛte adhvaryo odribhiḥ sutam, śukram te enyat etc. 1. 1. 2: 99) that a half *e* and *o* arise in such situations, and that after them *a* is omitted, a fact borne out by Nāgeśa, who says on the above quoted line :— 'sujāte e aśvetyakāralekhastu prāmādikah.' Cf. the Comm. on VPr. I. 94 against it. But the suggestion falls to the ground, when we note that this phenomenon was confined to the Śākhās of Sātyamugri and Rāṇāyanīyas alone, who according to the statement of Bhaṭṭoji (yadyapi chandogānām madhye sātyamugri-rāṇāyanīyā ardhamekāramardhamokāram cādhiyate sujāte e aśvasūnṛte iti antaḥ pādasthasyāvyaparasya tadīyaprātiśākhye' rdhamekāramardhamokāram ca vidadhāti tathāpi prātiśākhyā samākhyā-balādeva sarvaśākhāsādhāraṇe' smin śāstre tasya na grahaṇam, ŚabdaK. 1. 1. 2: 55) definitely noted it in their Prātiśākhyā (not available now) which must have been different from our treatise, which shows no trace of such a thing, and which the Carapa-Vyūha clearly ascribes to the Kauthumas.

(B) The second explanation may be that the sūtra is not meant for *abhinihita sandhi* alone and that like RPr. I. 73; VPr. I. 96; TPr. IV. 10, and Pāṇini 1. 1. 13, (Mac.

Vedic Gr. p. 66; Wackernagel, Altind. Gr. I. p. 325) it prescribes *pragrhyatva* for *tve*, not only before *a* but before other vowels as well. Cf. the Comm. on VPr. I. 96; TPr. IV. 10-11. *tve* iddhūyate haviḥ RV. I. 26. 6 noted by RPr. I. 73 occurs in SV. II. 966, besides *tve* iṣaḥ II. 1171, occurring 10 times in SV. but only twice before vowels. If we accept this explanation we can easily count for such cases, otherwise not. But two difficulties move against this guess : (1) The context is not in its favour. (2) Why to provide for *tve* alone, when we also have *asme indo svābhuvam* II. 511 (the word occurring 13 times in the Saṃhitā)?

83 The RPr. II. 34, 35; VPr. IV. 61; CA. III. 53; and Pāṇini VI. 1. 109 treat the *abhinihita sandhi* as a union of *a* with the preceding diphthong or its absorption by the latter. Our treatise on the other hand prescribes an actual loss or omission of the *a*, a fact in which it agrees with TPr. XI. 1. The elided *a* is to be very often read, as the evidence of the metre shows. The sandhi of *e* and *o* before *a* was originally the same as before other vowels. Cf. Macdonell, Vedic Gr. p. 66; Wackernagel, Altind. Gr. I. p. 324.

The stanzas on which RPr. II. 37-40, 44, 46 and 48 are based are not found in SV., hence there is no rule for them in our treatise. We find however (1) *saṃkrandano'*

- nimisab SV II 1203=RV 10, 103 1, not noted by our treatise, but registered by RPr II 41, (2) amhotipipratī II 700=RV 7 66 5 overlooked in RT, but noted in RPr 42, (3) nrto'pavo I 466=RV 2 22 4 noted by 78 and RPr 42, (4) yavase visyan II 748=RV 7 3 2, covered by 76 and RPr 43, (5) mahi trina mavo'stu 10 185 1 (RPr 45)—mahī trina mavarastu I 192, [6] yo adhyetyrsibhih II 647—RV 9 67 32 overlooked in R1 but covered by RPr 47
- 85 gayata rtāvne is not found in RV In abhyī 3 tasya (I 566 .bhyr. Stevenson, Benfey, SV XXIV) sandhi takes place, because r here does not stand at the beginning of a pada, and so it is in mrñjantyrśigana II 236 and yasyrhvaḥh II 938 But how to provide for (a) abhi rtasya dohana II 52, where also r does not stand at the beginning of a pada, (pīpratī, rtam II 946=RV 4 56 7 being covered by 74), (b) adhyetyrsibhih II 646, asyrjīsi II 759 where it ought to have counteracted 109 I would rather have this sūtra, like the following one, restricted to the words ending in a or a alone, and would guess the solution for abhi rtasya in 68 And the fact that this sūtra is meant to cover cases similar to those mentioned in RPr II 35, 64 corroborates my view
- 86 Cf RPr II 62 In such situations a or a is nasalised in the RV Cf

RPr II 67, ugra₂ olah 8 103 3 (wanting in SV) purustuta₂ eko (wanting in SV) bhara₂ ojo 8, 98 10, savaya₂ evā 1 113 1 Nasalisation does not take place in SV and the last two examples are read here bhara₂ ojo I 415 savayaivā II 1102 See Benfey, SV Einl XXXI, Wackernagel, Altind Gr I 314 Add visva ojasā I 372 in the comm The sūtra, like 85 is restricted to the words ending in a or a, otherwise in bhinattojasa (SV I 297) 109 will be counteracted

- 87 The examples cited by the commentator are not found in any veda They are certainly Vedic and are drawn from some lost work In SV I 62 anekhasam stands at the end of the stanza, hence it has no bearing on sandhi Similar cases are dealt with in RPr II 64, 65 Examples like patha indra I 453 are not covered by 71 and the commentator could have easily cited them here, but we do not know if these were included in the Śakan dhvadīgana which was certainly different from the gana referred to in sakandhavadīsu pararupam vā cyam' a vartika on Panini VI 1 94 providing pararupa (quite the contrary to our sūtra) in śakandhu, karkandhu etc

Note the form of the sūtra We would rather have saka andhukā dīnam

- 88 For corresponding rule, see RPr II 74 But what about bhuvanīni vyase II 307=viṛase RV 9 86

37. Note naki indra I. 203 = naki-rindra RV. 4. 30. 1; the latter being common.

89 This is to counteract 181.

93 The punctuation in the commentary may be emended to:-

uhhāvekam | (TPr. X. 1) vikārah sasthanah (91-92)-ityuktam |

The contraction was not so very common at the time, when Samhitās were composed. This is shown by the fact that at several places the metre requires hiatus. Cf. (a + a) stavetātithih 1. 85; devāyāgnaye 118; indrāśvam 240; brahmārcata 257; siñcādhva. 385; aśvādri. 398; devāja. 419; pavasvāndhasā 470; sutasyāndhasah 500; sunvānāyāndhasah 555; somāndhasā II. 327; prāśya 1118; nārvā 1127. ā + a in I. 70; 420; II. 663, 963, 1079, 1215, 1224. Indrāgni forms four syllables in I 281; II. 203, 204, 341, 342, 343, but three syllables in II. 9, 10, 266, 267. 268, 423, 424, 425, 923, 924. 925, 926, 1046, 1055, ā + ā in II. 964; i + i in II. 541, 774, 977; u + u in II. 724 For details see, Benfey, SV. Einl. L.

The rule is general in *loka* and *Veda*. For corresponding sūtras, cf. RPr. II. 15, 17; VPr. IV. 51; TPr. X. 2; CA. III. 42, and Pāṇini VI. 1. 101. Note the examples tvām (tva | am) and sūryasya (su | ūryasya). The *Padatext* divides sūrya only once at this place. For a detailed discussion on SVPp. and RVPp. cf. Benfey, SV. Einl. LVII—LX.

94 Nāmin. All vowels except *a* and *ā* are called nāmin, because they

tend to produce the *nati* or conversion of a following *s* into *ṣ*. RPr. I. 65; 66, 76; CA. II. 29 have the same term, while VPr. IV. 34, 46 etc. use bhāvin in its place. Cf. Bhaṭṭoji, ŚabdaK. 1. 1. 2: 64. The use of *astha* for *a*, *ā* *ā* 3 is noteworthy and so is *ustha* in 281. *Sandhya* = sandhija. Cf. Uvaṭa on RPr. I. 2, “akārasya ikāreṇa ukāreṇa ekāreṇa okāreṇa ca saha sandhau yānyakṣarāṇi niṣpadyante” and this is exactly the view of our treatise in ‘iti sandhyakṣarāṇi’ p. 2. But here in 94 and 95 it uses *sandhya* for *ec* and *dvivarna* for *aic* of Pāṇini. Cf. Bhaṭṭoji ŚabdaK. 1.1.2: 58 “śliṣyamāṇa varṇadvayasadrśāvayavatvāt sandhīyamānamakṣaram sandhyakṣaramityanvarthā pūrvacārya siddhā ecām sañjnā.” The term *dvivarna* may be yogarūḍhi for *yuj* (second and fourth in RPr. XIII. 39 cf. Uvaṭa on I. 3] and may signify that *ai* and *au* are composed of two varṇas i.e. *a* *i* *u* and both these elements are equal, being one *mora* each, a view singularly attributed to Śākatāyana. Cf. RPr. XIII. 39; Kālanirṇayaśikṣā 6; Patañjali on Pāṇini VIII. 2. 106; S. Varma, Critical Studies, p. 180

Indra is cited by Uvaṭa on RPr. II. 16. But in Naigeyaśākhā Benfey has noted *aindrām* in SV. I. 129; 459. Cf. SV. Einl. XXXII. In I. 377 *aindrām* is not *ā*—*indrām*, but means *Indra sambandhi*.

In *kveṇyatha* 1. 271; *vīrāyendāve* 360, *brahmendrāya* 390; *pavamā-*

nāyendave II. 1, *prendra* 89, some *ndrāya* 313, *nendra* 1051, *pretā* 1216, *predḍho* 371, *paprāthosā* I. 379 etc, metre requires hiatus. Cf. Benfey, SV. Einl L For corresponding rules, cf. RPr. II. 16, 17, VPr. IV. 53, 54, TPr X 4, 5, CA. III. 44, 45, and Pāṇini VI 1. 87.

In a few cases *e* is first changed to *ay* by 111, *y* is omitted by 159, and then *a* is joined with the following *i* by 24. Such instances are recorded by RPr II 70, where *meha nāsti* RV. 5 39 1 corresponds to our 'ma iha nāsti' I. 345. Cf Nir IV 1. 4, where Scold in vain tries to see a closer relationship between the SV and Nir Cf The Nirukta p 14. This irregular sandhi is frequently met with in Naige yadaivatam which has dvitīyen draḥ 1. 6 1 1. 7, tṛtīyendraḥ 1 6 1. 1. 3 See Benfey, SV Einl XXXIII

is applied to Bhāṣā and Veda alike, which is wrong, because 76, and 77 are not applicable to Bhāṣā. The sūtra obviously is an addition, made probably at the time, when our treatise underwent its final redaction. For corresponding rules, cf svādīreriṇoh|aksādūbinyā-mupasamkhyānam || the two vārtikas on Pāṇini VI. 1. 89. See also VPr IV. 58, where the commentator cites turya ūhi | turyauhi | VS 18. 27.

97 For partial correspondence of RPr. II. 72 (which notes praisayuh = pra + isayuh. Macdonell, Vedic Gr. p 64) and 'prāduhodhaudhyesai-gyesu' a vārtika on Pāṇini VI. 1 89 with Bhattoji's note — "yastu isa uṇche yaśca isa gatihimsādarśa nesu tayordirghopadhatvat iṣaḥ iṣyah tatradgune preṣaḥ presyah." This will make the difference between our treatise and the vārtika quite clear

95 For corresponding rules, cf. RPr II. 18, 19, VPr IV. 57, TPr. X. 6, CA. III 50, 51, and Pāṇini VI. 1. 88 In the commentary 'dvivar nam varnamapadyate' is the correct reading 'asthopadham prakrtam' seems better Though the contraction is written, the original vowels must sometimes be restored. Cf. *prastu* I 56, *naitasāḥ* II, 43, *pratinasyaukaso* II. 94, *sutasyatyasāḥ* II. 1118. See Benfey, SV. Einl. L, Macdonell, Vedic Gr p. 54.

98 For similar rules, cf. RPr. II. 71 (Macdonell, Vedic Gr. p. 64), VPr. IV 55 56, TPr. X. 14, and Pāṇini VI 1 94. VPr. IV. 56, 'ajatyajore keṣam' provides for sahojah etc (but note the SVPp saḥah | jah on II. 1206) which is covered here by 99 In our treatise the phenomenon is restricted to *upasargas*, but in CA III 52, TPr X. 14 its scope has been extended to words like śakalya and so on

96 Note the use of bhāṣāyām. This implies that (like Pāṇini) the rest

99 Cf. Pāṇini VI. 1 95 and 'otvoṣṭh ayoh samāse va' a vārtika on P. VI. 1 94. Our treatise goes further

and declares pararūpa to the compounds in general.

101 For corresponding rules, cf. CA. III. 46 (and 47 which is an exception to 48); TPr. X. 8; Pāṇini VI. 1. 87; 1. 1. 51. All prescribe the *sandhi* in a like manner. RPr. II. 32 and VPr. IV. 49, however treat it very differently, merely prescribing that both *a* and *ā* become *α* before *r*, without requiring the conversion of the latter into *r*, a fact stated by our treatise in 102 and by Pāṇini in VI. 1. 128.

102 101 covers RPr. II. 32 and VPr. 49, but implies *rabhāva* (guṇa) as well, while 102 negatives the same in the opinion of some i. e. the authors of RPr. and VPr. and others, who follow them in that matter. Thus it seems to provide for *yatha ṛnam* RV. 8. 47. 17; *yatha ṛtavaḥ* 10. 11. 5; *yatha ṛtuśo* 10. 98. 10; 2. 24. 13; 2. 28. 5 and so on, and also makes provision for *mahna ṛte* SV. II. 1137, if we construe *eke* as *pūjārtham*. The commentator on ŚSS. XII. 13. 5 makes an interesting statement, which may throw some light on the difference between the R̥gvedaśākhās. On 'na ṛte śrāntasya sakhyāya devāḥ' RV. 4. 33. 11, he says 'apadruto nāma sandhir bāśkalānām prasiddhaḥ tasyo-dāharanam'. Are we to understand from it, that the followers of other śākhās did not admit this sandhi?

For a list of the examples like those quoted above, cf. Benfey. SV. Einl. XXXII. RPr. II. 64 is an

exception to II. 32. For the corresponding rule in Pāṇini cf. VI. I. 128

103 VPr. IV. 59 provides for *aprktas* only. No corresponding rule is found in RPr; CA; TPr. and Pāṇini. But see 'ṛte ca tṛtiyāsamāse' a vārtika, on which Bhaṭṭoji cites *sukhena ṛtaḥ=sukhārtaḥ* SK. *Acsandhi*.

104 Exception to 101.

105 For corresponding rules of other treatises see CA. III. 48; TPr. X. 9; Pāṇini VI. I. 91 (*vā supyāpiśaleḥ* 92) and VPr. IV. 59 which however restricts the operation of the rule to the preposition *ā* alone. The TS. extends this contraction to prepositions ending in *α*, *upārc-chati*; see Whitney, CA. III. 47; TPr. III. 9. In the post vedic language this contraction was extended to all prepositions ending in *ā*. Cf. Macdonell, Vedic Gr. p. 64. n. 2.

106 Cp. "pravatsatarakambalavasanārṇad-aśānāmṛṇe" avārtika on Pāṇini VI. 1. 89.

Note its bearing on the date of the composition of our treatise.

107 Cf. Pāṇini VI. 1. 77.

108 An exception to 107. Cf. Pāṇini VI. 1. 127. The declaration of *hra-ṣva* implies *pragrhya sañjñā*. Cf. *patañjali* on P. VI. 1. 127.

109 For corresponding rules, cf. RPr. II. 21; VPr. IV. 46; CA. III. 39, and Pāṇini VI. 1. 77. The TPr. X. 15, however restricts the conversion into a semivowel to *i*, *ī* and *u*—a restriction, which might have been made by all, since final *ū* is

always *praghyā* and final *ṛ* nowhere in the Vedas comes to stand before an initial vowel Cf Whitney, CA III 39, Macdonell, Vedic Gr p 65 n 4 The fact seems to have been noted by the authors of our treatise who separately formed *sūtra* 107, which is obviously meant for usages seen in *Bhāṣa* alone Were it not so, the order of the *sūtras* would have been — *asvantaśtham* 107, *ṛṇeko* 108, and there would have accrued a clear saving of one *sūtra* We may also note here the close resemblance between our treatise and *Śabdānuśāsana* of the Jaina Śāka tāyana, who lived in the time of Amoghavarṣa I, and wrote his work about Śāka 789 The *sūtras* are as follows —

RT	ŚA	Panini
रसुखमखे	अखे I 73	इका यणचि 6 1 77
हखमेके	हखोवापदे 74	इकोऽसवर्णे शाकल्यस्य
अन्त स्थाम्	ऋत्यक 75	हखश्च 127 ऋत्यक 128

It is clear from the above, that the author of *Śabdānuśāsana* was well familiar with the terminology of our treatise, and that while adopting some terms from *Ri* or from some other ancient common source, he in the matter of systematisation closely followed Panini

In the commentary *RPr* II 32 is covered by *asve* (107) *hrasva-meke* is to cover Panini VI 1 128, which provides optional *praghyā*

iva for *abodhi* *agnih* etc In the comm read 'svarayorityadhikārah | vyabhiṇṇāra itī cod vikarah sathāna ityuktam,' *sathānah* of *RPr* II 21 is covered by 92 of our treatise

The word *antastha* designates *yan* of Pānini and its use in feminine gender (cf *antasthām svam RPr* II 21) may be significant Does it not hint at the important fact that Indian Grammarians, regarded *semivowels* not as essentially different from *v*, *u* etc but merely a by-form of the same (*antasthā vṛtti*), a form with which they had very often an interchange (as in the *samprasaraṇa* form of the vowel gradation) ? And the fact that in reality there was no interchange between the so called strong and weak forms and that both of them existed side by side even in Indo European times, seems to have been hinted at by Yaska, who, while discussing the ways of deriving words incidentally remarks "tadyatra svarādanan tarantasthantardhatu bhavati tad *dviprakṛti*nam *sthānam* itī pradīśanti" *Nir* II 1 2 Can we not infer from '*dviprakṛti*nam' that both ¹ *iyāja*, and *iṣṭā*, and *vāsati* and *uś māsi* are original forms ?

- 110 (a) The corresponding rule in Panini seems 'tavyoryavacī sam hitayam VIII 2 108, which counteracts VI 1 101 in *agnā* 3 *yin* *dram*, and VI 1 127 in *agnā* 3 *yāsa*, a fact corroborated by *Kāśika* which runs —

kintu yaṇā bhavatiha na siddham,
 yvāvidutoryadayam vidadhīti |
 tau ca mama svarasandhiṣu siddham,
 śākaladīrghavidhī tu nivartyau ||
 ik ca yadā bhavati plutapūrvah,
 tasya yaṇam vidadhātyapavādyam |
 tena tayośca na śākaladīrgho,
 yaṇsvaraśādhanaṁeva tu hetuḥ ||
 Like, hāu | ātra; hāu | āñja, we
 have to assume some vowel in 'syā-
 gnāi' and 'in āi', as is clear from
 'svarayorityadhikārah'.

(b) *gatiḥ*: i. e. adding *i* or *u*
 after *ā*, or *i* after *o*. About the defi-
 nition of *gati* see Simon, PpS. 520;
 for *ai* and *āyī* see Simon, PpS. Einl.
 p. 527, note 2, (the *āi*-*bhāva* is
 dealt with in PpS. III. 1—4, 242).
 In between the *ā* and a vowel, a *y*,
 or a like sound is inserted in the
gānas of SV. Cf. Weber, Ind. Stud.
 IV. 252; Oldenberg. RV. I, 457
 ff; Bloomfield on KS. 74, 19. 135.
 9. The *y* before *i*, *ī* and *e* is phoneti-
 cal; such a phenomenon is recorded
 in Pāli, where *y* and *v* are inserted
 before *i* and *e*. For details, cf. Wack-
 ernagel, Altind. Gr. I, p. 338 note.

111 Cf. CA. III. 40; VPr. IV. 47; TPr.
 IX. 11, 15, and Pāṇini VI. 1. 78.
 RPr. II. 25, 28, 31 however con-
 vert *ai* and *au* directly into *ā* and
e and *o* directly into *a*, adding that
 after the *ā* and *a* which come from
o and *au* a *v* is inserted, except
 before a labial vowel. See Macdo-
 nell, Vedic Gr. p. 67; Wackernagel,
 Altind. Gr. I. p. 326 (274). In the
 examples cited by the commen-
 tator, the reading of B. is preferable.

y is dropped by 159 according to
 Naigī, while according to other
 teachers it may remain. Benfey's
 SV. supports the reading of B.

112 Our treatise converts a *n* to *visar-*
janīya, when it is preceded by
 any long vowel, be it *ā*, *ī*, *ū* or *ṛ*.
 The *visarjanīya* when preceded
 by *ā*, becomes *y* by 117, only to be
 dropped by 158; but when prece-
 ded by other long vowels, it is redu-
 ced to *r* by 115, and an *anuvāra*, a
 consonantal element, is inserted by
 185 between the vowel and the *r*.
 The process here is then as follows:—
paridhīn + *ati* = *paridhīṇ* + *ati* (112) =
paridhīr + *ati* (115) = *paridhīr-*
ati (158). This process exactly
 agrees with that of the CA. accord-
 ing to which the process in *upaba-*
ddhā + *iha* would be like this; *upa-*
baddhān + *iha* = *upabaddhāḥ* + *iha*
 (CA. II. 27) = *upabaddhāḥ* + *iha*
 (nasalisation of the preceding vowel
 by 1. 67) = *upabaddhāy* + *iha* (II.
 41) = *upabaddhā* + *iha* (II. 21).
 This is an example of a *n* preceded
 by a long *ā*. But in examples like
ṛtū + *rutsrjate* where *n* is preceded
 by a vowel other than *ā*, the CA.
 makes some difference. Instead of
 following the reasonable process of
 changing *n* into *visarjanīya* and
 leaving it for rule II. 42 to change
 the latter into *r*, it directly
 converts the *n* into *r* by II. 29.
 The RPr. IV. 69, 70, 71 also change
n into *r* and then prescribe nasali-
 sation of the preceding vowel by
 IV. 80. Whitney's remark about

sādyah krena, sadyah kroma in LŚS. 130 VIII, 3, 1, 3) kāmśkān, sarpisku ndikā, dhanuṣkapālam (cf. Bhattoji SK. on P. VIII, 3 45) yajuspātram, ayaskāntah, tamaskāndah, ayaskāndaḥ, medaspindah, bhāskarah, (P. III, 2, 21) ahaskarah.

kautaskutādi —

kautaskutah, kaskah, putrādiny-
āsputrah, śiraspadam, adhaspadam
(P. VIII 3 47) ayaspātram (VIII
3 46 49) payaskāmah (VIII
3, 46), ayaspindah (medaspindah
in kaskādi), pitusputrah (the word
does not occur in RV, SV. and
AV. cf. RPr. 59, 61 Bhattoji has
pituh putrah on VI, 2, 133, and
hotuh putrah in kaskādi) śunaspu-
trah, śunaspātīḥ (in the interior
of a pāda, covered by 147, Pānini
covers this by VIII, 3 53) śunas
karnah, common to both.

The above comparison will show
that the ganas of our treatise grea-
tly differed from those of Pānini,
a fact confirmed by the commenta-
tor on 66, where he reads 'śivavai-
śravanau (vaiśvanarau) skanda viśa-
khan, naradaparvatau, uśanābṛhas
patī iti ganasamāsah.' Compare this
with the 'dadhīpaya adī gana (II,
4 14) of Pānini which runs 'dad-
hīpayasī, śivavaiśravanau, skanda
viśakhan, parivrajakauśīkau, and
so on

Note the influence of Pānini
on the commentator. He also puts
kaskā at the head of the gana

129 sadyaskala is covered by Pānini
VIII 3, 48

Read in the comm. •nyevampramā
nam instead of •nyekampra. The
citations show that this sūtra cor-
responds to Pānini VIII 3 45, if so,
then the use of *sāmārthyē* is quite
the reverse of that in Pānini VIII,
3, 44, which corresponds to our 131.

131 Punctuate mithunākhyo vā bhav-
ati | paroṣmā . bhāvāḥ | api hi
tāni • | purvayoge etc. is not clear.
The word *as* occurs in 187 only,
and that sūtra has nothing to do
with this phenomenon.

132 Cf. Pānini VIII 3 44, with Tattva-
bodhinī on SK. of Bhattoji.

133 Cf. VPr III, 23, TPr VIII, 24,
CA, II, 63 and Pānini VIII, 3, 41.

134 TPr VIII, 24, CA, II, 63 and
Pānini VIII, 3 41.

135 No corresponding rule is found in
the Prātiśākhya, but cf. Pānini
VIII 3 41 In the comm read
'kasmādasukho ? duṣkhamidam
śakatam' (kham - chidram) See

3 40

142 Pānini VIII, 3, 40. In the comm
read 'puraskrtamnam | niriyati

- taṃ | Cf. 'Madrāḥ karaṃ vina-
yante-niryātayanti'. Böhtlink on
Pāṇini I. 3. 36. śvabhiruryā- is
doubtful. I would prefer 'śvabhi-
rbhūyātarūpāḥ (-hhūmau yātaṃ
rūpaṃ śariraṃ yeṣāṃ).
- 143 RPr. IV. 43; VPr. III. 62; CA.
II. 65 and Pāṇini VIII. 3. 50.
- 144 This is to deny *s* in examples like
sādhaḥ kṛ- SV. I. 217.
- 146 RPr. IV. 44, 45, 56; VPr. III. 26, 31;
TPr. VIII. 28; CA. II. 66, 67 and
Pāṇini VIII. 3. 51, 53. I do not
know why the commentator has
included 'pituṣpari' [RPr. IV. 64]
among the counterexamples, where
'divaḥ pari' II. 534 may safely be
placed. For the practice of writ-
ing *visargas* before *ṣ* and *s* cf.
Benfey, SV. Einl. XLVI.
- 147 Cf. RPr. IV. 42, 46, 48, 49, 53;
VPr. III. 28, 35, 36; TPr. VIII.
27, CA. II. 70-74 and Pāṇini
VIII. 3. 53. somaspati II. 224 is
correct, according to our treatise,
but cf. somaḥ patiḥ RV. 9. 101.
6 (so noted by RPr. IV. 51).
viśvataḥ prthuh I. 393-II. 595
is correct according to RT. [cf.
divaḥ prthuh as a counterexample
on TPr. VIII. 28; Pāṇini VIII.
3. 51 Böhtlink] but cf. viśvatas
prthuh RV. 8. 98. 4 specially
noted by RPr. 53, 57; VPr. III.
27; CA. II. 78, and Pāṇini VIII.
3. 49; and such are divasprthivyāḥ
9. 31. 2 and vilitasprthuh 2. 21. 4,
not found in SV. and similar is
divasprṣṭhe on Pāṇini VIII. 3.
53. pituṣpitā is correct in SV.
- II. 745 and RV. 6. 16. 35 [RPr.
IV. 64] but how pituh pitā in AV.
18. 2. 49; 3. 46. 59 [cf. Whitney
on CA. II. 73] and manuḥ pitā I.
355 [where RV. has *ṣ* and which
is so noted by RPr. IV. 64] svaḥ
patiḥ II. 882; and svaḥ patī II.
351-RV. svarpatī in 9. 19. 2. In
RV. we find yaspatiḥ in 5. 51. 12
but yaḥ patiḥ in 10. 85. 39; pū-
rvaspatiḥ in 10. 48. 1 but pūr-
vyaḥ patiḥ in 1. 153. 4 which are
noted by RPr. IV. 51.
- 148 This is to avoid *s* in cases like
bandhuh pāvakah.
- 149 Cf. RPr. IV. 55; TPr. VIII. 29;
VPr. III. 25; CA. II. 80 and Pāṇini
VIII. 3. 53.
- 151 Before mutes immediately follo-
wed by *s* or *ṣ* final *s* regularly
becomes visarjanīya. In RV. occa-
sionally the sibilant disappears. Cf.
Macdonell. Vedic Gr. p. 71.
- For corresponding rules cf.
RPr. IV. 31. TPr. IX. 3, and
Pāṇini VIII. 3. 35. See also Bha-
ṭṭoji on P. VIII. 3. 37. Cf. priyaḥ
kṣapaḥ II. 1176.
- 152 Cf. CA. II. 25. Pāṇini VIII. 3. 6.
According to Whitney CA. II. 25
is an interpolation, but mark the
order of this and the following
sūtra in CA. and our treatise.
- 153 Cf. CA. II. 27. Virtually a sibilant
is inserted before the mute of the
same class with the latter, and the
n itself is replaced by the nasalisati-
on of the preceding vowel (see 185.)
Cf. CA. III. 133-36. The TPr. V.
20 gives a general rule for the

insertion of the sibilant before *c* and *V* 21 gives all the cases in which it does not take place. The insertion before *t* is noted in *V* 14 and all the cases of its occurrence are counted. The *1Pr* IV 74 registers all those words before which the sibilant is added, as well as before *c* as before *t*, *IV* 76. See Pāṇini VIII 3 7. In the *RV*, this insertion occurs only when the sibilant is etymologically justified that is in the nom. sing. and acc. pl. masc. almost exclusively though not invariably before *ca* (cf 154) and *cid*. The origin of the insertion of a sibilant is historical. Formerly the insertion of a sibilant before *c* and *t* was made after a word which was entitled by origin to a final *s*. Cf Macdonell, *Ved Gr* § 69, Wackernagel, *Altind Gr* I p 333 and the note on p 332, Lanman 516 A note. But in course of time the true character of the inserted *s* was forgotten and its sphere of occurrence being considerably extended, it came to be applied to cases, to which it did not historically belong. Thus in the other *Samhitās* the inserted sibilant becomes commoner, occurring even where it is not etymologically justified, that is in the 3 pl. impf., and the voc. and loc. of *n* stems. There are no examples of the inserted sibilant before *ch* in the *Samhitās*. In the post Vedic language a sibilant is invariably inserted after *n* before

all voiceless palatals, cerebrals and dentals. Cf Whitney on *CA* II 27, Bopp *Comparative Gr.* I 468, 478-479 'bhavāṁṣṭikā' of the commentary may be corrected to 'bhavāṁṣṭikato'. Cf the commentary on *CA* II 27.

Like *CA* II 27 the precept of our treatise also looks more like a rule of general grammar rather than that of a particular grammar or a *Prātisākhya*. This fact should be noted every now and then in our treatise, and this actually explains the name *Riktantra vyākharanam* of this *Prātisākhya*.

154 *Re* = the *yoni* of the *sāman*, and not the *Rigveda Sāman* form. *o* *setuṣāma* and *śukriyasamāpana* etc. are excluded. After *śukriya* we expect some counterexample.

155 Cf Pāṇini VIII 3 12. Examples quoted by the commentator do not occur in *SV*. No corresponding rule is found in other *Prātisākhyas*.

156 *budeśasasya* is a misprint. Read *lubedśasasya*. Cf *1Pr* II, 80, *VPr* III 15-17, *1Pr* V 15, *CA* II 57, and Pāṇini VI 1 132, 133. Pāṇini reduces *R* 156 and 157 into one *sūtra* 'otattadoḥ sukpo l oranaṣ samāse hal' VI 1 138 and is thus a decided improvement on our treatise.

157 Cf *1Pr* V 16. Pāṇini (*akoranana samāse*) VI 1 132. No corresponding rule is found in other *Prātisākhyas*.

158 Read 'mahā' *h* *saḥ* in the commentary. Cf *CA* II 55, *VPr* IV 38,

TPr. IX. 9. CA. VPr. and TPr. do not change a visarjanīya into *y* before consonants. They all drop it straight. Our treatise on the other hand, changes a visarjanīya, preceded by *a*, *ā* (cf. 117), alike before vowels and consonants. The RPr. IV. 24 declares that the visarjanīya, along with its preceding vowel, passes into *ā*, which is another way of saying the same thing.

159-160 The sūtra requires 'hā ātra' in the comm. Cf. CA. II. 21; VPr. IV. 125. TPr. X. 19-23 cite many discordant opinions on the subject. According to it *y* and *v* are dropped, when preceded by *a* and *ā*: Ukhya maintains contrary: Sāṅkṛitya denies the loss of *v*: Mācā-kīya allowing the loss of both, when followed by *u* or *o*: Vātsapara holds that they are not lost altogether, but only imperfectly pronounced (cf. 161). The treatment of final diphthongs in the RPr. does not include the exhibition of a final semivowel which is required to be lost, and hence there is no such a precept in RPr. See Pāṇini VIII. 3. 19.

161 Cf. CA. (II. 24) leśavṛttiradhisparśaṃ Śākatāyanah, where the word leśa means diminution, the word occurring in the same meaning in TPr. X. 19-23 which declares that Vātsapara holds not the omission but the leśa of final *y* and *v* after *a* and *ā* and the commentary there explains leśa by *lupta vaduc-cāranam*—an utterance of them as if

they were omitted. In the RPr. leśa is once found in the chapter treating of faulty pronunciation (XIV. 17), where leśa is glossed by Uvāta with 'prayatnaśaithilyena.' Pāṇini VIII. 3. 18 attributes to Śākatāyana the same doctrine as regards the pronunciation of final *y* and *v*. P. vyorlaghuprayatnatarah Śākatāyanasya is glossed by Bhaṭṭoji with 'yasyocārane jihvāgro-pāgra madhyamūlānām śaithilyam jāyate. Śākatāyana then is to be understood as holding, like Vātsapara that the final semivowels are not to be omitted altogether, but uttered with a slighter effort; the partial contact (īṣatsprṣtamantasthānām) which is the characteristic of them not being completely made. The followers of Pāṇini restrict Śākatāyana's doctrine to *y* and *v* when preceded by *bho bhago agho* and *a* (cf. Tattva-bodhinī on SK.), but the VPr. IV. 127 refers to him as exempting only the word *asau* from the treatment prescribed for *y* and *v* in every other case, which treatment however it does not declare to be attenuation but omission.

The statement 'ardham vā' does not attribute the phenomenon to a particular grammarian but as a view of the authors of this treatise. Does it not indicate that the treatise is composed by the followers of Śākatāyana, who adopted this view as their own, and, hence did not think it necessary to attribute

it to Śakatayana by name ?

- 162 See note on 161 In SV II 144 St reads *ya rtavrdhavrtaśya*, while Benfey has *yavrtavrdhavrtaśya* Cf *mitravarunavrtavrdhavrtaśprā* RV 1 2 8, *yavrtavrdhavrtaśya* RV 1 23 5 Cf Benfey, SV Einl XXIV But we must be very cautious in fixing the text of the Vedas on the basis of this kind of comparison, because a particular reading may belong to a particular śakha and may not be acceptable to others For example here the reading with *v* which is correct according to 163, may be acceptable (in the SV) to the followers of Nāigeya śakha and may not be liked by others, who agree with 160, and Benfey's SV is anything but the text of the Nāigeyas See also SV II 198, where St reads 'varunā rta' which Benfey emends to *varunavrtā* on the ground of RV 1 2 8
- 163 *v* is not omitted before *otu* in the opinion of Nāigī (aprapta) as well as others (160)
- 164 Cf 'avyaktanukarnasyata itū' Panini VI 1 98
- 165 Cf 'namreditasyantyasya tu va' P VI 1 99 *patatpataditi* or *patatpateti* from *patatpata + iti* Note that the sphere of Panini V 4 57 with the two *vartikas* (i.e. *dacī vivakṣite dve bahulam, nityamamredite dacī vaktavyam*) is different from that of our sūtra
- 166 See note on 128 Cf Panini VI 3 109, where Bhattoji quotes — *bhavedvarnagamaddhamsah*,

simho varnaviparyayat |
gūdhotma varnavikrter,
varnanasat prsodaram ||

- 167 Cf CA II 18 VPr IV 98 marks the loss of *s* from the root, *stambh*, but omits all mention of *stha* The TPr V 14 includes such cases in a more general rule, that *s* is dropped, when preceded by *ud* and followed by a consonant See Panini VIII 4 61
- 168 The commentator offers little help in the exposition of the sūtra, the exact scope of which can only be inferred from a critical comparison with CA III 30, VPr, IV 110, and TPr XIV 23, and in a way from Panini VIII 4 50 Let us take CA which prescribes doubling by 'samyogadīḥ svarat (III 24 = 269) and then by 'sasthane ca' (30 = 168) negatives it in the case of a consonant which is followed by another of the same class Similarly TPr XIV 1 (*svarapurvam vyañjanam dvivarnam vyañjana param = 269*) prescribes doubling of the first of conjunct consonants and then says 'savarnasavargiṣṭiparah' (23 = 168), that a letter followed by one homogeneous with itself or one of the same mute series, is not duplicated When read in the light of the above quoted rules of the two Pratisakhya, our sūtra 'tulye (tulye sthane lupyate) can be easily reduced to this much, that a letter is not doubled by 269, when followed by its savarna which is another way of saying the

same thing. Thus in 'vahanti' I. 25.31 *n* is not doubled; *iṣantokāya* (= *iṣam* + to 180) *n*; in *imāsta s* (obtained by 269 which is not restricted to 'hrasvātparaḥ' 263, cf. *vedyam* in the comm. of 169; VPr IV. 102 prescribes the doubling of *t* in such cases, while our treatise does not); in *indra n*, (the omission of *y* cannot be meant); and in *yāvāhuḥ sayujā* (= *huḥ* + *sa* 177) *s*. In the counter example 'surūpa id gomān' *ḍ*, occasioned by the doubling (269) may be omitted, but not the original *ḍ*, which is here not followed by its *savarṇa* letter. We must note here that the *savarṇa* in TPr. XIV. 23 applies only to an identical letter, and to the nasal semivowels into which *n* and *m* are converted before *y*, *l* and *v* by TPr. V. 26. 28=181. Thus while TPr. denies doubling of *v̄* in 'devav vahanti', our treatise (169) makes it optional. That the above mentioned is the ken of this precept is hinted at by the comm. who says 'punah punah prasaṅgaśca' (= again doubling by 269 and again omission by 168).

169 In the sūtra, *rāt=svarāt:sthā=antasthā; ajare-ajapare* (- re - pare, as *rādi-parādi* in 26). This sūtra is meant [1] to make 168 optional before semivowels and [2] to dany the same before letters that are followed by *ac*. Cf. 'anaci ca' VIII. 4. 47. According to this the *c* of *accha* I. 523 should not be omitted [cf. VPr. IV. 25]. But Benfey adopts 'achā' every where, which may indi-

cate the absurdity of blindly following the mss., which were very often copied and recopied by ignorant scribes. That a careful editor of the *Samhitās* ought to disregard as of no authority or consequence, the variations or the unanimity of his mss. upon such points, and to adopt uniformly the reading prescribed by the *Prātiśākhya*s was suggested by Whitney on TPr. V. 24. Our sūtra would then restrict the ken of 168 to forms like *indraḥ*, *rāṣṭram*, *bhrāṣṭram*, *candraḥ*, and these are the very examples quoted on Pāṇini VIII. 4. 50 'triprabhṛtiṣu Śākatāyanasya' which means that according to Śākatāyana no duplication takes place in a group of three or more letters. And it is a pity that Burnell without making a thorough study of the text remarked in his introduction to RT. (p. XI) 'but of all his distinct and peculiar opinions there is no clear trace in the text'.

170 For corresponding rules, cf. RPr. IV. 29; CA. II. 19; VPr. IV. 35; TPr. VIII. 16; Pāṇini VII. 3. 14; Wackernagel, *Altind. Gr.* I p. 325; Macdonell, *Vedic Gr.* p. 72. Stevenson reads 'yuktā barhi ra' cf. Benfey on it, in SV. Einl. XXVI. When *r* is dropped, the final vowel is lengthened by RPr. IV. 29; VPr. IV. 35; TPr. VIII. 17; CA. III. 20 (which is a bit deficient, Whitney) and Pāṇini VI. 3. III; and since our treatise does not give such a rule, the commentator prescribes a *vārtika* 'rapūrvayośca dīr.

- ghatvam,' For other vārtikas, cf. the comm on 226, 236, 243, 245 etc
- 171 For similar rules, cf. RPr VI. 2, TPr. XIX 5, VPr. IV. 108, CA. I 94, and Pāṇini VIII 4 33, 55.
- 172 Cf. VPr. IV. 119, CA II. 4, and Pāṇini VIII 4 55 Final consonant is assimilated in quality to the following initial, becoming voiceless before a voiceless consonant and voiced before a voiced sound, as in in *yaltcā* RV. 1. 15 10. There is a tendency to write 'ksi pajyām' for 'kṣipajyām' (RV 4 27. 3) and 'tatra yami' for 'tattvā yāmi' in some mss For its justification see Wackernagel, Altind Gr. I. p. 327 and my note on 271 In TS 1.2 7. 1 'samyatto-samyak te' and here a final guttural has become a dental before a dental A similar example has been noted by me in Sāmāntantra, where we have *rechhlokam* for *rkṣlokam* cf note on 179. Here the assimilation has extended its sway to the place of articulation as well Cf Wackernagel, Altind. Gr. I. p 328 (277A)
- 173 The Prātisākhya's are unanimous on this point Cf RPr IV. 3, VPr. IV 121, TPr VIII 2 Pāṇini VIII 4 45 allows either the unaspirated sonant or the nasal before a nasal, while ms. usage is invariably in favour of the nasal. See Macdonell, Vedic Gr p. 67, Wackernagel, Altind. Gr I p 328 c. SV I 279 (Benfey) reads '*udag nyag ra*', while the commen-
- tator requires '*adan nyag vā*'
- 174 Cf RPr. IV. 12, 13, VPr. IV. 97, CA II 17 and Pāṇini VIII. 4. 63 TPr V. 22, 24 prescribe the change of *t* and *n* into *c* and *ñ* before *ś* and V. 34, 35 the conversion of *ś* into *ch*, when preceded by any mute excepting *m*, Vālmiki (V. 36) also excepting *p* and Pauskarsādi (V. 37) denying the changes, when *ś* is followed by a consonant and denying in this situation also the change of the preceding *n* into *ñ*. For details see Whitney CA. II 17 'magha vāñ chagdhī' according to Wackernagel the process of euphonic alteration here is a bit different He thinks that in such examples an insertion of *t* (similar to that before *s* 187) takes place before *ś*, that is '*vajrin śnathihī*' may become '*vajrin śnathihī*' or '*ñchna*' (through '*ajrimeśna*' for '*ajrint snā*') Cf Wackernagel, Altind Gr. I. p. 332 and the rule 280 a on 331, Macdonell, Vedic Gr p 69.
- 175 Cf. Pāṇini VIII. 4 63 and the vārtika 'chatamamiti vācyam' on it Read '*na naigih | ścota yata, śnathī, ślokam, śnaśati, śmaśruṇi iti pratyayah* | For *śnathihī* cf. Wackernagel, Altind Gr. I p 311 On VPr IV 96 is cited '*adityaṇ śmaśrubhīh*.' See also YvŚ 123 For *ślokam*, cf. '*rechhlokam*' on 179, which in the opinion of some will be '*rkṣlokam*' Examples for other words are not traced in SV and RV. (For such a case in RPr cf.

Uvaṭa 'vada, mṛgyamudāharaṇam' on VII. 33). For 'ścyotati' Bhaṭṭoji cites 'vākscyotati' on the vārtika quoted above.

- 176 RPr. IV. 5; VPr. IV. 122; CA. II. 7 agree with our treatise on this point. The same doctrine is attributed by the TPr. V. 38 to Plākṣi etc. TPr. V. 39-41 declare that in view of some, the *h* remains unchanged, while the Mīmāṃsakas and others hold that an aspirated sonant is inserted between the final surd and the *h*. Pāṇini VIII. 4. 62 allows the *h* either to remain unchanged or to become the sonant aspirate. See Macdonell, Vedic Gr. p. 73.
- 177 The meaning is that ūṣmā i. e. visarjanīya is converted into the spirant corresponding in position with the following letters. Thus before *c* and *ch* it becomes ś, before *t* and *th* *s*, before *ṭ* and *ṭh* ṣ, before ś, ṣ, *s* it is changed into each of these respectively; before *k* and *kh* it becomes jihvāmūliya and before *p* *ph* it is converted into upadhmānīya. Visarjanīya itself then does stand in Samhitās before a pause. CA. II 40 agrees with it; the VPr. III. 9. 12 gives as taught by Śākatāyana the doctrine of RT.—namely that visarjanīya becomes a sibilant before a sibilant and jihvāmūliya and upadhmānīya before gutturals and labials, (while according to III. 10 Śākalya leaves visarjanīya unchanged before a sibilant) and itself maintains III. 11

the visarjanīya before gutturals and labials; VPr. III. 7 prescribes its conversion into ś before *c* and *ch*, III. 8 declares the change into *s* before *t* and *th* and III. 13 rejects the visarjanīya altogether before a sibilant followed by a surd mute. TPr. IX. 2, 3 agree with our treatise. Like RT. (151) TPr. also declares that visarjanīya remains unchanged before *ks*. It then rehearses the different opinions of other teachers in IX 4, 5 and IX. I. The RPr. treats at considerable length the changes which RT. compresses into a single rule. RPr. IV. 31 completely agrees with our treatise, excepting the case of a sibilant followed by surd mute, before which the visarjanīya is to be dropped by IV. 36; IV. 33.34 permit the retention of a spirant before gutturals, labials, and unaltered sibilants. Thus we see authorities vary on the treatment of visarjanīya before surd letters, the point on which they all agree being its conversion into *s* and ś before dentals and palatals. See also Pāṇini VIII. 3. 35 which declares that visarjanīya remains unaltered before surd mutes, if they are followed by ś ṣ and *s*, and VIII. 3. 36 which allows a visarjanīya either to remain unchanged before ś ṣ, *s* or to be changed to the corresponding sibilant. See also the vārtika 'kharpare śari vā visargalopo vaktavyaḥ' which prescribes omission, retention and its alteration into sibilant. According to Whit-

ney the assimilation to a following sibilant was a more primitive mode of pronunciation than the retention of it, which has become prevalent in the later language, a fact fully borne out by old mss Cf Whitney on CA II 40 In the commentary read *jihvamuliya* before *l* in *divah* (×) *kakutpatih* and *upadhmaniya* before *p* in *patih* (×) *prthivyah*

For the treatment of final *s* before dental *t* and cerebral *t*, cf Macdonell, Vedic Gr p 70, 71, Wackernagel, Altind Gr I p 339

In the commentary 'dusvapnyam' may be read 'dussvapnyam' For the tendency of spelling *rayi syāt* (= *rayih + syat*) *śuci sma* (- *śucih + sma*), *gobhi syama* (- *gobhih + syama*) cf Benfey, SV Einl ALI

178 For corresponding rules cf RPr IV 9-11, VPr IV 95, 96 TPr V 22-24, CA II 10, 11 and Panini VIII 4 40 There seems hardly any agreement among the Vedic mss in the treatment of final *n* before consonants in general and before *c*, *ch* and *t* in particular, and there is "hardly any passage in which all the codices agree either to make or to neglect the assimilation Whitney We shall concern ourselves here mainly with the SV where *n* has been virtually superseded by anusvara -

(1) *n* before *c* is represented by anusvara in *asmam ci* II 770, *vajrim ci* I 408, RV has a variant, *vajrim citra* II 213,

yamam citra I 135 For such examples in the RV mss cf Benfey, SV Einl XXXVII.

(2) *n* before *ch* *sam chukra* I 83, *maghavam chagdhī* I 274, *vindam chisri* II 258, *śi dam chyeno* II 167, *asmam cha tru* II 1219, *rurukvam chatra* II 1227 For such cases in the RV cf Benfey, SV Einl

(3) *n* before *j* *vidharmam jana* I 385, *bhrajam jyoti* II 377, *maghavam jyok* II 1154, *gacham jāro* II 724, *arnavam jagamyah* I 340 For RV cf Benfey.

(4) *n* before *t* *ajigīṣam tam* I 372, *maghavam tubhyam* II 219, *samam tapa* II 779, *avām tmana* II 435, *śatrum tadhi* II 1227, *dasyum tanubhih* II 337 For RV cf Benfey In Panini V 4 118 Bhattoji has 'ajna' while Maha bhasya has 'anna' also Cf Böhtlingk on it

n is required to be assimilated with the following *cavarga* by RPr, VPr TPr, RT and Panini It is assimilated to the following *j* according to CA (II 11) as well But even before *j* we find anusvara Why?

There has been a great similarity between *m* and *n* in the matter of *sandhi* Barring a few stray situations (like *samrat*) *m*, when followed by a consonant was not allowed its distinct independent existence It was assimilated with the following *mute* (and *antastha*) by RPr IV 6, TPr V 27, VPr

IV. 12; CA. II. 31; RT. 180; and Pāṇini VIII. 4. 58. It was turned into *dot* before *r* and *spirants* by RPr. IV. 15; TPr. V. 29; VPr. IV. 1; CA. II. 32 and Pāṇini VIII. 3. 23. But there arose a tendency, probably for convenience sake, to show *m* by the *dot* even before *mutes* and *semivowels* noted by our treatise in 182, and by Pāṇini in VIII. 4. 58 and 59. This tendency slowly gained ground till it completely superseded the phenomenon of *parasavarṇa*.

Exactly the same thing occurred with regard to *n*. VPr. IV 2 turns *n* into anusvāra in the interior of a pāda, and a similar phenomenon is recorded by Pāṇini in VIII. 4. 24, in which CA. goes further and makes the use of anusvāra a universal usage. Cf. Whitney on II. 11; see also 34. Preceded by a long vowel and followed by a vowel or *y*, *v*, and *h*, the *n* was unanimously turned into either anusvāra or anunāsika (cf. note on 112); followed by *c*, *ch* or *t* it gave rise to *s* (153) which in turn changed it to either anusvāra or anunāsika. Thus in *sandhi* the letter *n* was, in a vast number of cases, represented by the *dot*, and no wonder if this *dot*, helped by the process of simplification, superseded *n* even before those letters, where its use was correct, and prescribed by the grammatical treatises.

Thus before *d* we find *n* represented by anusvāra in *vṛṣam dyā-*

vā I. 93; *devām deva* I. 100; *harivām dadhe* I. 223; *agmam devasya* I. 435; *vidharmam devebhyaḥ* I. 521; *nyasmim dadhra* II. 77; *kramdam devā* II. 110; *mahām devo* II. 284; *kṛṇvam diva* II. 309; *kramdam devo* II. 310; *sedham duritā* II. 666; *madhumām drapṣaḥ* II. 719; *dharmam divo* II. 802; *stabhāyam divo* II. 896; *mahām deva* II. 1110; *asṛgram deva* II. 1166. Before *dh* we find a variation in SV. I. 344; before *p*, *n* is changed to *ṣ*: by (Pāṇini VIII. 3. 10, 37; for which there is no rule in our treatise) or *ṣ*: Cf. *nṛ ṣ*: *pāhi* RV. 8. 84. 3 = *nṛ ṣ*: *pāhi* SV. II. 594, but *nṛn pāhi* in RV. I. 174. 1. For *n* before *l*, and *s* see Benfey, SV. Einl. XXXIX.

The process of simplification had gone to such an extreme by the time when the Sāmaveda mss. (on which Benfey based his edition of SV.) were written that, of assimilation, we do not find in them, even a single example, and this was probably the reason why our commentator imported 'paśyaṇjanmāni' from RV. 1. 50. 7 and it is no wonder if the scribes have not followed the practice of assimilating the *n* to the following *cavarga* even under that rule which prescribes its observance.

In the commentary adopt *bhāvān pāre* instead of *pāre*. For the euphonic combinations of final *t*, cf. Macdonell, Vedic Gr. p. 68, 69;

Wackernagel, *Altind. Gr.* I. p. 328.

- 179 There is no difference among the different authorities with regard to the combination of *t* with either *ś* or *l*, though there are differences in the mode of statement of the rules. See RPr. IV 9, 10, VPr. IV 13, 96, CA. II 13, TPr. V. 22, 25, and Pāṇini VIII. 4. 60, 63, 'ṛkślokaḥ' is doubtful. But cf. 'vāḥcheto' on P. VIII. 4 63. In the commentary of Śāmalantra once occurs *rechlo-lam*' (perhaps due to the change of the space of articulation, as *t* is found in *samyatte* for *samyak te*. Cf. Wackernagel, *Altind. Gr.* I. p. 328) For the treatment of final *n* before *l*, cf. Macdonell, *Vedic Gr* p 69.

- 180 For corresponding rules, see RPr. IV. 6, TPr. V. 27, VPr. IV. 12, CA. II. 31, and Pāṇini VIII. 4 58. The mss. and printed texts usually represent this *sandhi* by the anusvāra sign. The actual change of *m* to *n* before dentals led to some errors in the *pada text* of RV. Cf. Wackernagel, *Altind. Gr.* I. p 332, Macdonell, *Vedic Gr.* p. 68. *tvāṅkāṣṭhā* St has *tvā kāṣṭhā*, 'tristum-makāre' preferable, here *m* is not turned into anusvāra

- 181 2 CA. II 32 omits *m* before *an* *tasthā* and *ūḡman*, but this omission carries with it the nasalisation of the preceding vowels, CA II 35 however declares a nasal *l* before *l*, the RPr. IV 15 changes *m* into anusvāra before the spirants

(see 183) and *r*, but makes it before *y*, *l* and *v*, a semivowel nasalised (see IV. 7). VPr. IV. 1, 4, 10 agree with the above, but IV. 5 declares that Kāśyapa and Śākatāyana hold that *m* is dropped. The TPr. XIII. 2 proscribes the omission of *m* before the spirants and *r*, but converts it (V. 28) into the nasalised semivowel before all other semivowels. Cf. Pāṇini VIII. 4. 59. Forms like *yamyamana* and *apomlukta* show that final *m* originally remained unchanged in sandhi before *y* and *l* (Wackernagel, *Altind. Gr.* I. p. 334) and forms like *jagantān* point to its having at one time become *n* before *v* in sandhi. Macdonell, *Vedic Gr.* p. 68. Read 'krīm yīyathā' and so on in the commentary. It is to be noted that while VPr. IV. 5 declares that according to Śākatāyana the *m* is dropped, our treatise changes it to semivowel.

- 183 Cf. VPr. IV. 1, TPr. V. 29, RPr. IV. 15 and Pāṇini VIII. 3. 23. Before *r ś ṣ s* and *h* final *m* becomes *anuvāra*. From its original use before sibilants and *h* *anuvāra* came to be employed before the semivowels also. This is shown by 182. In the post Vedic language *anuvāra* came to be before mutes and nasals also. The compound 'samrat' shows that *m* originally remained unchanged in sandhi before *r*. See Wackernagel, *Altind. Gr.* I p 334, Macdonell, *Vedic Gr.* p. 68, and my note on 178

184 Cf. Pāṇini VIII, 3. 26, 27.

185 114 is meant for those cases, where the visarjaniya has been reduced to *y* only to be omitted by 158. The present precept covers those cases, where the visarjaniya is reduced to *r*. According to our treatise then, the raṅga is a nasalisation of the preceding vowels, while anusvāra is a consonantal element, which is inserted between *u* and *r* in 'ṛturanu' and the like. This distinction is also admitted by Pāṇini VIII, 3. 4. The TPr. XV. 1 prescribes the nasalisation of the preceding vowel in case of the conversion of *n* into *r*, a spirant or *y*, also when the *y* is omitted, or in case of the omission of *m*; while TPr. XV. 2 adds that some deny this and XV. 3 directs that an anusvāra is inserted in between. It should be noted that the TPr. is not perfectly decisive upon the question, whether the so-called anusvāra consists in a nasalisation of the preceding vowel or in a nasal consonantal element following the vowel. See Whitney on TPr. II. 30. For corresponding rules see RPr. IV. 80; VPr. III. 131, IV. 4, and CA. I. 67.

186 CA. II. 9; VPr. IV. 15, and TPr. V. 52 are virtually in agreement with our treatment as regards the insertion, while RPr. IV. 16 merely mentions them as enjoined by some authorities. See Pāṇini VIII, 3. 14. The insertion of these tenets after the words is a purely

physical phenomenon and is quite natural. Cf. Whitney, CA. II. 8. 9.

187 In the commentary 'sāyi' may be read 'sāye.' Cf. Böhtlingk on P. VIII, 3. 30. Before the dental sibilant final *n* remains and a transitional *t* is inserted e. g. 'mahānt samudraḥ' I. 429. In such cases the *t* is organic. From such survivals it spread to cases where it was not justified. Cp. Wackernagel, Altind. Gr. I. p. 332; Macdonell, Vedic Gr. p. 69. The mss. however do not uniformly follow this rule. Cf. Benfey, SV. Einl. XXXVIII; Burnell, Shpbr. p. XIII. In English a final *t* is very often added after *n* as in *pleasant tyrant*, *peasant*. Here the *t* is added on the analogy of the alternation often found in OE. between a singular in—*nt* and a plural in—*ns*. Just as the singular *merchant* corresponded to a plural in—*ns*, so also a singular *peasant* was formed to the plural in—*ns*. For details see O. Jespersen, A Modern English Gr. I. p. 220.

For corresponding rules, see RPr. IV. 17; TPr. V. 33; CA. II. 8, and Pāṇini VIII, 3. 30. SV. II 767 *yat-sam* (St.) may be emended to *yant-sam* Cf. Benfey, SV. Einl. XXVI.

188 Read 'ṣaṭṣvaṇṭikāyanah,' like 'pra-tyaṇṭikāyanah, udāṇaupagavaḥ' Patañjali I. 1. 2; Bhaṭṭoji, ŚabdaK. I. 1. 2: 57.

189 TPr. V. 6; VPr. V. 43; CA. IV. 58, and the vārtika (sāmpuṣkānāp to vaktavyaḥ) on Pāṇini VIII, 3. 31.

- 190 TPr. V. 7, and Pāṇini VI. 1. 135, 136.
- 191 This rule sounds peculiar. This is apparently meant to show the function of the past perfect, which does not come in the ken of a Prātiśākhya. For the insertion of *s* cf. Pāṇini VI. 1. 135.
- 192 RPr. IV. 85, 87, VPr. III. 53, Pāṇini has (VI. 1. 137-139) three sutras, while our treatise serves the same purpose with one. In the comm read 'gobhirbhangam pariśkṛtam' SV. II. 683
- 193 Pāṇini VI. 1. 148.
- 194 Pāṇini VI. 1. 157, which includes in it pāraskara, kāraskara, and rathasyā (cf. 209 a separate rule for it), kiśkah, kiśkindhā, tadbrhatoh karapatyoscoradevatayoh sutalopaśca (cf. 311) and prāttum patau gavī kartari |
- 195 Pāṇini VI. 1. 149.
- 196 No corresponding rule even in Pāṇini. He on the other hand notes 'apāccatuṣpacchakunīṣṭlōkhaṇe' VI. 1. 142 on which vārtikakāra says 'sudapī harṣādiṣṭeva vaktavyah', 'kiratorharsajivikākulāyakaṇapēsvitī vacyam' Cf. Bhattoji on it. In the comm. 'apakīratyanyat' would suit better.
- 197 Pāṇini has two sutras for it, VI. 1. 140, 141. In the comm. read 'parikhām'
- 198 Pāṇini VI. 1. 150
- 199 Pāṇini VI. 1. 143.
- 200 Pāṇini VI. 1. 146
- 201 Pāṇini VI. 1. 144. Cf. Bohtlink on it
- 202 Pāṇini VI. 1. 135. Our treatise restricts the word harīścandra to the *re*. Cf. 207.
- 203-4 Pāṇini VI. 1. 145. Pāṇini leaves the use of this word in *anūcarite* (204) unnoticed, while our treatise overlooks its use in 'sevitāsevitadoṣe'
- 205 Precisely the same rule is found in Pāṇini VI. 1. 147.
- 206 No corresponding rule is found. For *Askrāh* ..vāhasah, cf. ŚSS. VIII. 21. I 'vaśvadevīyam nivit saha pūrvāh paścābhīrūnatrimṣadavaśānā' The reading in Nividadhyāya is 'askrāh' For *askra* cf. TS. 1. 5. 8. 5, 2. 5. 8. 6, VI. 3. 8. 1.
- 207 Cf. RPr. IV. 84, VPr. III. 54, and Pāṇini VI. 1. 151, Macdonell, Vedic Gr. p. 74. Mark the SVPr. harīh | candrah, but su | candrah and puru | candrah. According to Bhattoji Pāṇini VI. 1. 151 provides for harīścandrah and suścandrah in *mantra* and VI. 1. 153 for harīścandra in *loka*. But I would rather have 151 for suścandrah and puruścandrah etc. and 153 for the two words mentioned in the sūtra
- 208 Exactly the same rule is found in Pāṇini VI. 1. 155
- 209 Cf. pāraskarādīgana on Pāṇini VI. 1. 157.
- 210 Cf. 'maskaramaskarīṇau venuparī vṛajakīyoh' Pāṇini VI. 1. 154. Jñānendra, the author of *Tattva bodhinī* says 'maskarasūbdadinī matvarthīyenestasiddhau maskarī grahanam pūrvavajaka evayam pra

yogo yathā syādityevamārtham.' Against this view cf. Kaiyata on 154, Bhaṭṭoji in his SK, remarks:-

'maskaraśabdo' vyutpannaḥ, tasya sūḍiti nipātyate' This remark is very significant, inasmuch as it indicates in a way that this sūtra and others which treat *avyutpanna* words are not Pāṇini's his own, who held that the Uṇādis are not derivative words (cf. Vārtikakāra, Patañjali, Kaiyata, Bhaṭṭoji and Nāgeśa on 3. P. 3. 1) but who, in order to make his work complete and thorough, adopted them and the sūtras like the present one, from Śākaṭāyana (Nāgeśa ŚŚ. on P. 3. 3. 1) who in his *Nairukta Vyākaraṇa* (ŚŚ on 3. 3. 1.) proposed that all words were derivative (Nir. I. 4) and did accordingly give derivations of difficult words, some of which may have been adopted by Yāska in his Nirukta. It is quite probable that in parallel passages, found in Pāṇini and Rktaṇtra, the former stands a debtor to the latter, which was perhaps (1) originally written by Audavraji, (2) was improved upon by Śākaṭāyana (3) and was finally brought to its present form by his followers. For details see introduction.

211 Cf. VPr. III. 52. *taskaraḥ tatkarō bhavatīti* Yāska, Nir. III. 3. 14. 2; and 'tadbṛhatōḥ karapatyoścōradavatayoḥ suṭ talopaśca' in *kaskādigana*.

212 The sūtra prescribes lengthening for *bhāṣā* alone. But cf. RPr.

'paryabhyapāpīti vṛtāvṛvarne' IX. 6. Pāṇini would construe *prāvṛvṛute* etc. as *pra + ā + vṛvṛute* and so on.

213 VPr. III. 125. and RPr. VII. 6.

214 Pāṇini VI. 3. 117.

215 No corresponding rule is found. The RPr. devotes three chapters (VII-IX) to the subject of the irregular prolongation of vowels. In VPr. the same subject occupies the sixth section of the third chapter (III. 95-128); and one rule in the seventh in the TPr. it occupies the third chapter, which however, inverts the form of statement adopted by other Prātiśākhya, and details the cases in which a vowel which is long in *Samhitā* must be shortened in the *pada*. The method of stating the phenomenon of prolongation adopted by different treatises is so varying that little would be gained by any detailed comparison.

216 RPr. IX. 216.

217 VPr. III. 130.

218-9 RPr. IX. 1; VPr. III. 103; CA. III. 9, and Pāṇini VI. 128-129.

220 CA. III. 10 and 'śuno dantadam-ṣṭrākarnakundavarāhapucchapadeṣu dīrgho vācyaḥ' a vārtika on Pāṇini VI. 3. 130. In the comm. read: *śva-vit | śvāvit | vit | śva-padaḥ | śvāpadaḥ | pad | śva-varahaḥ | śvāvarāhaḥ | varāha |* and so on. It was customary to repeat the word after citing its example.

221 Cf. Pāṇini VII. 3. 90 and 'āsarva-nāmnah' on it.

- 224 Cf. Pāṇini VI, 3, 137. Cf. Bhaṭṭoji on this sūtra, and Böhtlingk on II, 2, 27.
- 225 Pāṇini VI, 3, 125, 126
- 226 Pāṇini VI, 3, 47, 49. The commentator in 'Abhiṭṭamake dvikādaya' is referring to 'dyastāśh samkhyāyāmabhubhrihyāṭiyoh' VI, 3, 47.
- 227 CA, III, 2. Read in the comm. *astāpadam* | *astāpādam* | *jada* | *astāgoguktam* | *astāg-yuktam* | *go-yukta* | and so on. Cf. note on 220.
- 228 CA, III, 1, and Pāṇini VI, 3, 137. There is no *anvaya* in *turṅgāt* in the *pāṭi* text of the SV, and RV. For 'jalāpāt' cf. Böhtlingk on VI, 3, 137.
- 229 Pāṇini VI, 3, 117.
- 230 RPr, IX, 6. Pāṇini VI, 3, 116 restricts the operation to seven roots.
- 231 RPr, IX, 7, VPr, III, 106, CA, III, 12 and Pāṇini VI, 3, 122. SV, II, 466 *parināsam* St., *pari-nāsam* Benfey, SV, II 853 *pari-vṛtāh* St., but *pari-vṛtāh* in Benfey.
- 232 Pāṇini VI, 3, 122.
- 234 CA, III, 11. Pāṇini compresses this sūtra into two syllables 'dastī' VI, 3, 124, where Böhtlingk cites *nitta*, *vitā*, *paritā*. For *t* cf. Pāṇini VII, 4, 47 and Yaska, 'prattamavattamiti dhātavādī oṣa śiṣyeto' Nir II, 1.
- 235 VPr, III, 130. Note the brevity in 'ikah kaśo' Pāṇini VI, 3, 123. Mark the *anuvāra* for *n* in *pratikāśām* (= *n*) in the comm.
- 236 Cf. CA, III, 16 with Whitney's exhaustive note, VPr, III, 130, Pāṇini VI, 3, 133, RPr, VII, 12, 13, 21, 24, 27, 29, major portion of 30, greater portion of 33, 35, 36, 37, 39, 40, 46, 49, 50, 51, 80, IX, 35 are practically covered by the general rule of our treatise. It should be noted that our treatise avoids rehearsing examples and like Pāṇini proscribes a general rule which covers several situations. Note that while in SV, II, 532 St. has *jahi vītrā*, Benfey reads *jahi vītrā*. See Benfey, SV, Eini XXV.
- 237 RPr VII, 23, 26, VIII, 1, 4 are partly covered by this. See also Pāṇini VI, 3, 133, SV, II 615 *para* (St.) but *parā* in Benfey. Our treatise supports the latter.
- 238 RPr, VIII, 8. In SV, II, 190 St. has 'vītrasmā īsvardṅgo' but Benfey reads 'vītrasmā īsvardṅgo' (*īsvar* = *īsvar* of Pp) and the note on 271; Benfey, SV, Eini XXV) In SV, II, 381 St. has 'pariyanti' but Benfey 'pariyanti' which is correct according to our treatise. Cf. the comm. 'upasargo na' In II, 332, St. has 'vanāni ca' but Benfey 'vanāni ca' the latter being correct.
- 239 RPr, VII, 13, and Pāṇini VI, 3, 134. In SV, II 596 St. has 'abhihiṣatya,' but Benfey 'abhihiṣatya.' 'dantyo pratyāgo' support the latter. But why not *abhi doṣā* * *ayāsyah* 1 In fact this kind of lengthening mainly depended upon the requirements of the metre, for which see 'lengthening of final short vowels' in Arnold, Vedic metre p 145

240 RPr. VII. 43, 44, and Pāṇini VI. 3. 134.

241 RPr. VIII. 18 is covered by this.

242 VPr. III. 111, and CA. III.4. Mark that our treatise takes 'yuyotanā' as two words and the SVPr. makes *avagraha* in 'kṛnotana' etc. In SV. II. 232 St. has 'tadadya' while Benfey reads 'tadadyā'; the latter is supported by our treatise.

243 'ayamu te bhāṣyam' is a kind of vārtika. It is to be noted that while Kātyāyana uses the word vācyam in his vārtikas, our treatise has invariably bhāṣyam. In the comm. on Sāmāntantra such vārtikas are more than one hundred.

244 SV. I. 397 runs 'yuyotanā no' while the comm. requires 'yuyotana no', because here it is citing *yuyotana* as a counter-example. The word does not occur anywhere else in the SV.

245 RPr. VIII. 11 is included in this and 243. RPr. VIII. 13 is also covered by this. A portion of VIII. 14 also. Mark in the comm. 'janayat bhāṣyam.'

246 'abhi madatā vosvo arṇavam' SV. I. 242 cited as example by the commentator shows that lengthening takes place, though the *pada* is not immediately followed by a 'nakāripada.'

In the commentary. read 'ādidvandeo | In 'ādid vaṃdeta varuṇam' I. 288, it is not lengthened, because it is not followed by a sibilant.

'saptā nū ṣata' SV. I. 577; there is no *n* in this, yet this is cited by

the commentator as an example.

247 Cf. RPr. VIII. 6.

248 RPr. VIII. 10.

249 RPr. VIII. 35 is partly covered by this.

250 'imam stomamarhate jātavedase rathamiva saṃ sahemā maṇiṣayā' SV. I. 66 In this verse the lengthening takes place, because it has 'imam' in it. In 'dvirimam stomāyām' the commentary says the same thing in an obscure manner. I do not understand the significance of 'somaparvabhiḥ', because, there being no *imam* word in this ṛc, the sūtra cannot be applied to it.

257 na kevalāḥ svarasandhiḥ | ā tvetā | The commentator means that in ā tvetā there is first lengthening of ā tū and then *sandhi*; hence the sūtra is not applied to it

258 RPr. XII. 20 reads 'prābhyāparā nirduranūpāpasampariprati nyatyadhi sūdavāpi | upasargā viṃśatirarthayācakāḥ sahetarābhyām || TPr. I. 15 reads 'āprāvopābhyadhi prati pari vi nītyupasargāḥ | These ten words are but half the number which are reckoned as prepositions by the RPr., and VPr. VI. 24 and by Pāṇini I. 4. 58, 59; see *prādigana* in Pāṇini's *Grammatik* by Böhtlingk 154. The discordance is real and difficult to explain, though the commentator of TPr. suggested that only so many are recognized by the Yajurveda. See Whitney on TPr. I. 15. cit—vāk are not counted in *cādigana*. Cf. Pāṇini's *Grammatik* for

cādigana which is an ākṛtigana

262 Pāṇini VI. 4 73

263 Cf. RPr. IX, 40 VPr. III 120, and Pāṇini VI, 3 137. Cf. Bōht link on it

264 Cf. CA III. 27 which also prescribes doubling of final consonants. Our treatise does not expressly mention *padānte*, hence its scope is unrestricted and it may well apply to the words in pause as well. Indian grammarians generally do not prescribe doubling of final consonants, the only exception to this being our treatise and CA. VI. 7, VPr. IV. 116 and TPr. XIV. 15 unanimously teach that a consonant is not duplicated in pause. It should be noted that the authors of these treatises recognized the doubling only in the Samhitā pāṭha, and not in the *pada text*. This hypothesis is to some extent supported by the fact, that both the RPr. VI 14 (cf. Vṛata on it) and Pāṇini VIII 4 51 attribute to Śākala or Śākaḷya, the teacher to whom the invention of *pada text* is generally attributed, a denial of all duplication

One thing more. We have no record of such doubling in Sanskrit except in liaison, while Prakrit has dropped the final consonants instead of doubling them. If the phenomenon ever occurred, it must have been confined to a particular area, which it is difficult to locate at present

265 OA. III. 27, RPr. VI 15, VPr. IV. 106, TPr. IX. 18, 19, and Pāṇini VIII.3.32 SV. In II.289 St. reads *dadhya*apo*, while Benfey has *dadhyanapo*. See also SV. II. 515. St. *śatṛ*as*, Benfey *śatṛhas*. For reasons see Benfey, SV. Einl. XXV, XXXIV. All grammatical authorities agree that the final *n* or *ñ*, when preceded by a short vowel, and followed by any vowel are doubled. But note that, while Pāṇini and others make this doubling obligatory (*nityam*), our treatise makes it optional (= *dvaiddham*). But according to the *Parīśikṣā* and *Vyākṛṣikṣā* the final nasals, though written double, should be pronounced only once. When a consonant follows, these nasals, according to *Varnaratnadīpikā śikṣā*, like all final consonants, may be doubled, in 'āpnuvannpūriam' etc. as in *tattḥaroti*. 'But although this *śikṣā* calls them final consonants, they cannot be strictly called final, because they are followed by other consonants, and their doubling, according to *Siddhośvara*, is really a case of liaison rather than doubling proper. Likewise doubling of final *n* before vowels is also a case of liaison, for the final *n* represents in many cases an original Indo-Germanic *nt* (or *ns*), which by assimilation from the succeeding vowel became *nd*, and was finally changed into *nn*, Skt. *san* = *sonṭs*. Similarly final *n* represents *nhs*, pratyān really being *pratyānhs*.' For details see Macdonell, Vedic Gr.

- p. 68; Siddheśvara Varma, Critical Studies etc. p. 106. For various explanations of this doubling, see Wackernagel, Altind. Gr. p. 330.
- 266 For the definition of *stobha*, cf. JNMV. IX. 2. 11; Śabara on Pūrva-mīmāṃsā IX. 9. 7; Sāyaṇa, SV. I. p. 11; Vedic Chant. pp. 1-3; B. Faddegon, Ritualistic dadaism. Acta Orientalia V. 1926. 177 et. seq.
- 267 RPr. VI. 3, and Pāṇini VI. 1. 73. 'karnācchidram' may be emended to 'karnacchidram.'
- 268 RPr. VI. 13, and Pāṇini VI. 1. 74. Note 'mā cchinnoti' in the comm. and cf. 'ātrṇoti' (=ātrṇatti Yāska, Nir II. 4) in Saṃhitopaniṣadbr. III. p. 32. Pāṇini VI. 1. 76 prescribes *c* in *kālī cchāyā* also.
- 269 Cf. note on 168-169. RPr. VI. 1; VPr. IV. 100, and TPr. XIV. 1, put corresponding rules at the head of the *varnakrama* as the fundamental and most important rule. The CA. III. 28 treats it, like our treatise, in a general manner. The intricate and obscure subject of duplication in consonant groups is treated in RPr. VI. 1-14; VPr. IV. 100-107; CA. III. 26-32, and Pāṇini VIII. 4. 46-52. This is treated at a greater length by TPr. XIV. 1-28.
- The examples given by the commentator may be read 'abhipriyāni' and so on. Benfey does not give doubling, and the majority of mss. agree with him. Cf. SV. Einl.
- XLVII. Our treatise does not particularly note the treatment of a consonant group, beginning with anusvāra. The VPr. IV. 109 expressly exempts anusvāra from duplication, [while *śarah khayah* (cf. SK. on *saṃskartā*) a *vārtika* may imply its doubling in *saṃskartā*, because Patañjali has put anusvāra among the *śars*. Cf. Pat. on *hayavarat'*; and Nāgeśa ŚŚ. on *saṃskartā*] and the RPr. VI. 1 rules out anusvāra in the estimation of consonant groups, it being thought that a consonant is doubled after it in the same manner as after a vowel, a fact confirmed by Patañjali on '*hayavarat'*' and Bhaṭṭoji (anusvāra visargajihvā mūliyopadh-māññiyamānāmakāropari śarṣu ca pāṭhasyopasaṃkhyātātvenānusvāra-syāpyactvāt) SK. *Halsandhi*. According to Whitney there is no reason to doubt, that the same is to be taken as the doctrine of the TPr.; and that it takes anusvāra as the affection of the vowel, to which it is attached, at least so far as the duplication is concerned. This may equally hold good in the case of our treatise also. It has already been noted that both the TPr. and our treatise do not hold very definite views, regarding the phonetic value of the *anusvāra*.
- 270 *raṃ hrāt* = *paraṃ rephahakārāt*; *natau* has been supplied by the commentator. According to the comm. *rephahakārābhyām* we would expect in the sūtra '*rhāt*' in-

stead of *hrāt* VPr IV 101, CA, III, 31, and Pāṇini VIII 4 46 exactly agree with our treatise. The RPr. VI 4, 8 'param rephāt, na rephah' and TPr. XIV 4 're phatparam ca' deny doubling to *r* alone, and leave *h* to meet the same treatment with other spirants.

In the comm read *ājuhvāna sya, arklādīni* | 'duduhīro' seems a counter example, and is here misplaced.

271 Read examples with doubled *ṣ*. The precept seems rather an ill conceived one, since the doubling is already declared by 270. Its real function however is to deny the doubling of spirants, when they are followed by a vowel, as in *lar ṣati*, and this is exactly what other Prātisakhyas and Pāṇini do, cf. TPr XIV. 4-16, CA III 31-32, and Pāṇini VIII. 4 46 to 49. The RPr VI 10 however exempts from duplication any spirant, when followed either by a vowel or by any other spirant. For the fact that *nyama sūtras* are meant for negation, cf. Patañjali (Kielhorn, Ind Ant XVI 242) and Nāgeśa, ŚŚ *Halsandhi* on Pāṇini VIII 3 17. For the importance of Pāṇini VIII 4 50 from the point of view of our treatise, cf. note on 168. For the fact, that like our *sūtra*, the three *sūtras* of Pāṇini (VIII 4-48-50) are really meant for *vyavastha*, cf. 'yaro' *nunasika ityato vetyanuvr tyā, nacityeva siddhe tu sūtratratra*

yamapī tathoti' Nāgeśa, ŚŚ on VIII 4, 50.

The tendency for duplication had a peculiar charm for the Indian phoneticians, who elaborately stated its niceties, and thus carried it to a frightful appearance. Groups such as *nthsttr, tthspphy, kllshttny*, mentioned by Whitney on TPr. XIV, 9 would pale into insignificance before the staggering variety of the forms of *samskṛtā* [Bhaṭṭoji, SK, against 'trisakārakama pi' cf. Nāgeśa, LŚŚ 'iti na yuktaṃ lakṣyo lakṣanasyeti nyāyāt' etc.] resulting chiefly from the duplication of *s, k, t* and even *anuvāra* (-*śar*, cf. Patañjali on *hayavarat*), forms which could have existed in pure theory alone, and which probably had no Patañjali's sanction, who, for the formation of *prīyāṣṭau, prīyāṣṭā*, first said on Pāṇini 1 1 24, 'yathalakṣanamaprayukte', but at once corrected himself by saying 'naiva vā lakṣanamaprayukte varjate, prayuktānāmeva lakṣanenānvāhyanāt'. Cf. also Nāgeśa, LŚŚ on *prīyāṣṭā*.

But this tendency brought its own nemesis, and we see the process of simplification set in comparatively early in the mss, (cf. Roth, ZDMG. XLVIII, 101) which adopt more or less regularly the abbreviation of a double consonant before a consonant (Kielth, Veda of Black Yajus XXXVII n 5), and gradually ignore the doubling altogether (cf. Macdonell, Vedic Gr for Students p 413 *rundhe*)

This process too was carried in turn to extremes, till we meet instances, where the Vedic mss. use one letter in place of two, which were not the result of doubling, but belonged to two different words. Cf. *jy* for *j̄jy* in *dadhajyotir* 't+jyo' SV. II. 879; *ty* for *t̄ty* in *bhinattyojasā* 'tti+o' I. 297; *tr* for *t̄tr* in *caratrimṣat* 't+tri' I. 281, corrected by Benfey; *tv* for *t̄tv* in *mahatvām* 't+tvā' II. 258, *utvā* 't+tvā' I. 194; *yatvā* 't+tvā' I. 371; *itvām* 't+tvā' II. 334; *citvā* 't+tvā' II. 662; *ṣatve* 'ṣat+tve' II. 928; *syātva* 't+tvā' II. 1158; *dy* for *d̄dy* in *pathodyām* 'ut+dyām' I. 92; *yadyāvah* 't+dyā' I. 278; *dr* for *d̄dr* in *enadras* 't+dra' I. 4; *dv* for *d̄dv* in *vakṣadvipade* 't+dvi' II. 1057; *dhy* for *d̄dhy* in *idhyasya* 'it+hi+a' I. 224; *cidhyasti* 'cit+hi+asti' II. 335. These forms are provided in our treatise by 168-169. The principle of dropping *d* before *dh* gave rise to forms where *t* is dropped before *s*. (*s*+*s*=*ts*). Cf. *isvardṛṣe* 'it+sva' II. 190=*itsvardṛṣe*, in RV. There are good many instances, where in place of *ñk* and *ṅg* only *ṅ* is written. Cf. *ante* II. 1101; (CA. II. 20) *aṇdhi* II. 878; *paṇti* I. 56. Here *ñt*-*ñkt*-*ñkkt*. Cf. Benfey, SV. Einl. XLVII; Wackernagel, Altind. Gr. I. 133-134.

272-73 For corresponding rules, see RPr. V. 40; VPr. III. 85; TPr. III. 6; CA. III. 75, and Pāṇini VIII. 4. 1, 2. For details of cerebralisa-

tion, cf. Macdonell, Vedic Gr. p. 38; Wackernagel, Altind. Gr. I. p. 187.

274 See RPr. V. 58 (exceptions in 59); VPr. III. 87, and Pāṇini VIII. 4. 27. Note *arṣā naḥ* II. 685, where RV. 9. 61. 16 reads 'arṣā naḥ' so noted by RPr. V. 58. SV. II. 797 has *rirīhi naḥ*, while RV. 9. 11. 9 runs *rirīhi naḥ* not noted by RPr. 59. SV. I. 81, 184, 358, 509; II. 598, have *pra naḥ* and II. 247, 560 *rerd pari naḥ* [which sounds peculiar, when read in the light of 'pariṇa iti Śākaṭāyanah' VPr. III. 88], while RV. 7. 41. 3, 57. 5; 8. 19. 27, 71. 6, 80. 4; 9. 79. 2 etc. have 'pra naḥ' and RV. 8. 47. 5; 9. 54. 5; 9. 64. 18 etc. have 'pari naḥ.'

275 RPr. V. 40 (samānapade 'vagrhye) 54-57; VPr. III. 87-89 (exceptions in 90-93, 96); CA. III. 76, 77, 79, -85 (exceptions in 86-92) prescribe *ṇatva* in compound words. Our treatise, on the other hand, has no rule to cover these compound words, but simply says 'māse yathā dṛṣṭaḥ' (1), and thus shows its unwillingness or inability to cope with the intricacies of Vedic grammar. 272 and 273 are apparently meant for *samānapadas*, and this is exactly the reason why words like 'pariṇasi' are cited on sūtra I. And yet the commentator here cites *hāriyojanam* etc. as counter-examples, words which are in reality no *ekapada* (like *giriṇām*), and to which, therefore the two sūtras (272-73) are not applicable. A

similar inconsistency has been noted by Whitney on TPr, XIII 15

For cerebralisation in two *padas*, cf *svārnā* II 1201, but against this *svārnopa* in II 303, which is wanting in RV, *varnā* II 61, *śṛṅgavṛṣo napāt* II 77, *nṛbhīry emānah* II 52=RV 2 113 3 which has *yemāpah*, *nṛmanāh* I 323 and so on

RPr V 42, 44, OA III 93, 94 give to separate rules, while the VPr III 96, and TPr XIII 15 prescribe one rule Our treatise precisely agrees with the latter group

The physical explanation of the effect of the sounds mentioned in this rule, to prevent the cerebralisation of the nasals obvious. They cause the tongue to change its position, when the tongue is once bent back in the mouth to the position in which the cerebral sibilant, semi-vowel and vowels are uttered, it tends to remain there and produce the following nasal at that point. But these letters suddenly call it into action in another quarter and thus put it out of adjustment, as it were, and thus prevent the cerebralisation of the following nasal. Cf Whitney, OA III 94, Macdonell, Vedic Gr p 38 n 2, Wackernagel, Altind, Gr p 187 note

276 VPr III 58 precisely agrees with our treatise. See also OA II, 87, RPr V 22 (which has better example 'svarṣāmapsām' and Panini

VIII 3 57, 59. It should be noted that the proper function of a *Prātisākhya* is to give rules for the conversion of the disjoined text into the joined one, hence it should have nothing to do with the process of derivation of a word. Peculiarly enough our treatise is here prescribing a rule for the formation of words like *ṛkṣu*, *vanikṣu* etc, with which a *Prātisākhya* has nothing to do. On VPr III 58 Uvata cites these examples and then tries to justify the position taken up by the *Prātisākhya* in the following words —

“nanuca yatra padakāro'nyathā bhutam padam karoti anyatha cārṣasamhitā tatraiva lakṣanam kartum yajyate, yathā suśāva, suśāva, yatra punaḥ padakārasya cārṣasamhitāyāśca samānavākryatvam tatra lakṣanam na ghaṭate | vyākaranasya viśayasiḥ | satyameva, yadā nāma prasangamupajīvādācāryena siṣya vyutjattiyartham kaścidvyākaraṇa lakṣana ihāsañjitaḥ evam samhitā yāmavidyamānesu lakṣaṇam draṣṭavyam | athavā yathā edhahārasya madhvāharanamudakahārasya matsyāharanam puṣpahārasya phalāharanam evametadapi | evam ca kṛtvā adoṣa eveti | ”

But this is a lame excuse and does not by any means justify the position. In fact the *Prātisākhyas* do enter now and then in the discussion of a matter which is really out of their province. For instance in OA I 83 we read a rule which

prescribes shortening of a nasalized vowel occurring in the interior of a word. Similar is the case with RPr. XIII. 22 (one of its later books) which treats the same subject, and for the introduction of which into the *Prātiśākhya*, the commentator, Uvaṭa takes so much pains. Cf. RPr. XIII. 22. Similarly CA. II. 33, 34 concern matters, with which the *Prātiśākhya* properly has no concern. Accordingly RPr. IV. 7 disposes of them simply by specifying that *m* is altered before an initial vowel, excepting *ṛ*. The TPr. says nothing upon the subject, but the VPr. IV. 2 gives a precept which includes both the rules of CA. in it. Sometimes these treatises prescribe most blundering and superfluous rules. For example, CA. III. 43 shows that in 'sīmānta' the resulting vowel is short, a word which is nowhere found in the AV. Again, it is a peculiarity of the author or authors of our treatise, like that of the CA, to give their rules a wider scope than the vocabulary of the *Sāmaveda* requires, in many instances contemplating and providing for combinations of sounds, which are found nowhere in the whole body of the Vedic literature, and for which the commentator is compelled to fabricate examples. Note the sūtras from 186 to 235 and their commentary. Here one would at once mark the identity or near correspondence of so many fabrica-

ted illustrations furnished by the commentator with those given by the scholiasts to Pāṇini, and it is a very noteworthy fact, as it supplies us with a positive proof of the more intimate relation of the grammatical system of our treatise, than that of any other of the *Prātiśākhyas* with the general Sanskrit grammar.

277 'śū gāyatā' is the sāman from of '(rāja)su gāyata' SV. I. 255. No corresponding rule is found.

278 Cf. Pāṇini VIII. 3. 57.

279 Cf. TPr. VI. 1 4, and CA. II. 90. Note the peculiar way of citing examples. The commentator picks up the opening 'ā tvetā' of I. 164, and the example niṣidata, to which the sūtra is applied, comes afterwards; and such is 'ā sotā pari śiṇcātā' in I. 580. For a similar practice in TPr. cf. Whitney on TPr. IV. 20. *pra te* II. 236 contains no word on which the sūtra may have any bearing. The reading *pra tu* seems correct, because I. 525 runs 'pra tu drava parikoṣaṃ niṣiṇca' and there we get 'ni ṣiṇce' to which the sūtra is applied. 'ā no' I. 43, has *puruspr̥ham* where *puru* is not an *upasarga*, *abhi tyam* is the reading of Bur. and B., and with this open I. 376, and 464; but neither contains any word on which the sūtra may have any bearing. I suspect *abhi kram* in place of *abhi tyam* and in 'abhi-krandan kalāśeṣu sīdati' II. 382, we get *sadaneṣu sīdati* as a counter-example of the sūtra, ucoā

to I 467 has *divi* and *uditrata* (*yaduditrata* I. 474, which has *dha* nam in place of *dha*nd of RV.), *da* dhosmān, 'Athiyau' refers to (a) I. 223, which contains *sugurūmsam* and (b) II. 1017, which has *sugum*ṛṣ.

280 (a) In the comm. *trish* means, that the word 'pari svānah' occurs thrice in SV. Cf. I. 475, II. 443, 663. But add *pari svānah* of I 485. Similarly *drish* means, that 'adhī-*s'nah*' occurs only twice, Cf. I. 529, 532, in 601, 529 is repeated. The reading 'adhāyādrishī' seems better, because in these situations *s* is not that of a dhātu, but of a word, which is not derived from a dhātu. Note the extreme brevity, which is the chief characteristic of our commentator.

(b) The phenomenon of changing *s* into *ṣ* has been treated in details by RPr. Here is a comparison of the same with our treatise —

s=ṣ after a upaṣṭut RV 9 87 9 (RPr. V. 30) not found in SV. and not noted by Pāṇini, Benfey notes *antarikṣasat*, but cf. Bohtlink on P. III. 2 61. After a *vṛthāsāt* I 63 4, only once in the RV, but wanting in SV, *turāsāt* II 304, only once in SV, but fourtimes in RV; noted by the comm with *prhāsāt*, *prtanāsāt*, *śatrusāt* on CA II 82, *prtanāsāt* II. 781 thrice in SV., but fourtimes in RV., not divided in the *pada text* of either. *prtanāsāhyā* 3. 37 1 noted by RPr. V 23, VPr III. 75, and

Pāṇini VIII. 3. 109.

s=s after *i*: RPr. notes examples of 'sah.' *vi sa* RV. 9. 97. 38=*vi sa* II. 706, *āt sah* G. 2. 4, but *āt sah* in SV. I. 365 *hi sah* I. 351; *vi su* II. 1037 and the like are covered by 282.

RPr. V.—

4 provides for *sat* and *sthah*: divided 9 61, 10, but cf. *divi* *sad* in SV. II. 22 and *divi san* in I. 83 (RV. has *san*). 'yu-*vam hi sthah svarpati*' is a counter-example and occurs in SV. II. 351, 423 having *svaḥ pati* RPr V. 4 is covered by 280.

6 provides for *gobhissyāma* etc., which are not found in SV.

7 notes *sma*, *hisma* RV. 1. 37. 15 = *hisma* SV. II. 319. SV. II. 1078 has *prati smā*, but I. 23 reads *prati sma*, where RV. has *s*, SV I 230 has *api smas*, where RV reads *s*. Such cases are covered by 282. Cf. VPr. III. 68,

8 examples do not occur in SV.

9 examples are wanting in SV.

10 *esa u syah* 9. 3. 10=*syah* II. 61. SV. II 588 has *pari aya*, but RV. reads *pari aya*.

11 Pāṇini VIII. 4 41—286.

12 provides *satva* for 16 *padas* *tamu śavāma* 8. 95. 6—II. 234, *anustunuvanti* 8 38—II 922, (VPr III. 72), *āpo hīsthā* 10. 9. 1—II. 1190, (cf. TPr. VI. 2 which converts *s* into *s* after 12 words), *rājati śtup*

9. 96. 18-II. 524; pari śtoḥhan-
ntu 8. 92. 19-II. 72, II 413.
All are covered by 281, 282.

8. 14. 1=1. 122.
- 28 For sutesute see note on I.
carsanīśaham 8. 21. 10=II.
709. Cf. VPr. III. 84.
- 29 abhi satvā 10. 103. 5=II.
1206. Cf. VPr. III. 8; TPr. VI.
12. For ānusak, cf. note on 1.
- 30 puru santyoḥ 9. 58. 3=II.
409; susamidhā 7. 17. 1; sus-
amidhāḥ II. 695.
- To the phenomenon of co-
rebralisation Pāṇini devotes
53 sūtras. Cf. VII. 3. 57-109.
- 281 Cf. RPr. V. 18, 19; VPr. III. 61-
63, and TPr. VI. 2. See also 'śuñāḥ.'
CA. II. 97, which is quite identi-
cal with Pāṇini VIII. 3. 107 and
is according to Whitney somewhat
defective. See Whitney, CA. II. 97.
- 282 In the comm. 'jāgato pādo' may be
corrected to 'jāgato pāde.'
- 283 RPr. IV. 41, and Pāṇini, VIII. 3. 41.
- 284 RPr. V. 31-38; VPr. III. 74-79, and
Pāṇini VIII. 3. 101, 104. suṣṭu-
taḥ, is the reading adopted by
Bur. But 'avasusṭamaḥ' SV. I.
451 seems correct, because in

susṭatah *s* is not *sandhya*. In susṭatah the *s* is changed into *ś* by 272. See Pāṇini VIII. 3. 103. In 'ivamagne gṛhapatistvam hotā' SV. I. 61 paṭh is not in the middle of the pāda, but at the end of it, hence cerebralisation does not take place. Cf. Bhaṭṭoji on Pāṇini VIII. 3. 103, and the commentary here 'pādamadhyasye tyadhikārah,' (brought down from 282). SV II. 237 has *prabhosṭe*, but RV. in the same passage has *prabhosṭe*.

- 285 Correct 511 to 551, which reads 'dhanuṣṭanvanti paumsyam' In 'surirābhistarati vājakarmabhiḥ,' 'surirābhiih' is not followed by a *pada* containing *p*
- 286 Cf RPr V. II, VPr. III. 80, TPr. VII. 13, 14, OA II. 16, and Pāṇini VIII. 4. 41.

- 287 This sūtra has nothing to do with this treatise. It stands at the beginning of Sāmāntara, a treatise of Sāmaveda, which treats sāmāna form of the ṛc and is invariably appended to RT. In fact both the treatises are supplementary to each other, and the one is not complete without the other. We know nothing for certain about the author

or authors of either. Tradition attributes RT. to Śākaṭāyana, and Sāmāntara to Audavraj.

Nor can we say anything about the author of the commentary on RT. as to who he was or when and where he lived. The quotations from gāthās (see 38) and the quotation from Nakulamukha, which could have given some clue about his date, are, in spite of my best efforts, yet untraced. A portion of a copious commentary on this gloss was secured from Adyar Library and is given in the following pages. But as it is incomplete and does not comment either on the beginning or the end of our treatise, it is of no practical value to settle anything about the authorship either of RT. or of the commentary thereon. Further research is required for settling this question and I feel confident to continue my quest, till it bears the desired fruit.

The statement of B, that RT. contains 280 sūtras, seems to be due to miscalculation, as I have carefully compared A, B, C and Bur for this, and found the same number of sūtras in all of them.
